

# Beaver Lake Master Plan Revision

For More Information Visit Our  
Website at:  
<http://go.usa.gov/Mw5H>

The Army Corps of Engineers, Little Rock District, is revising the Beaver Lake Master plan. The master plan guides the management of the government-owned and leased lands around the lake. The master plan affects future management of natural resources and recreational opportunities to ensure the sustainability of Beaver Lake.

The master plan revision will set the stage for a later update of the Shoreline Management Plan.

This is your opportunity to let the Corps know how you would like the lake to be managed for the future.

The planning process will include an analysis of potential effects on the natural and social environment, including fish and wildlife, recreational opportunities, economics, land use, cultural and historic resources, aesthetics, and public health and safety.

## About Beaver Lake

Beaver Lake, birthplace of the White River, is located in Northern Arkansas (Benton, Washington, Carroll and Madison counties) and was authorized by the Flood Control Act of 1954. The lake is 38,131 acres of land and water with 487 miles of shoreline. Beaver Lake is the number one water supply source for Northwest Arkansas. The water supply mission at Beaver Lake comes from the Water Supply Act of 1958.

During high water events and flood periods, Beaver Lake is operated in conjunction with other lakes in the White River Basin to prevent flood damage along the White and lower Mississippi Rivers. The dam also generates hydropower electricity.

## What is a master plan?

A master plan is the guidance document that describes how the resources of the lake will be managed in the future and provides the vision for how the lake should look in the future. The master plan does not address the details of how and where shoreline use permits may be issued, however, it does set the stage for implementation of the shoreline management program. After the master plan is revised, the operational management plan and shoreline management plan would be revised to be consistent with the goals identified in the master plan.

Development of the revised master plan will include consideration of:

- Regional and ecosystem needs
- Public interests and desires

The Beaver Lake Master Plan Update main objectives are:

- Conserve the resources of the lake within the current policies and guidelines of the Corps of Engineers
- Accommodate current and projected use patterns with maximum efficiency
- Identify and protect cultural and natural resources
- Attract maximum participation by the general public and local government

## Why Update the Beaver Lake Master Plan?

The current Beaver Lake Master Plan was developed 40 years ago and is outdated. The master plan revision will classify the government lands around the lake based on environmental and socioeconomic considerations, public input, and an evaluation of past, present, and forecasted trends.

Lands may be classified into one of these categories:

- **Project Operations:** lands required for the dam, spillway, offices, and other areas used solely for the operation of the reservoir.
- **High Density Recreation:** lands acquired and designated for use as parks or other areas for intensive recreational activities by the visiting public. New private floating facilities would not be allowed in these areas.
- **Environmentally Sensitive Areas:** lands designated for areas where scientific, ecological, cultural, or aesthetic features have been identified. These areas are managed to protect environmental resources.
- **Multiple Resource Management Lands:** This classification allows for the designation of a predominant use with the understanding that other compatible uses may also occur on these lands; these additional uses may include:
  - **Low Density Recreation:** lands classified for use for activities such as hiking trails, primitive camping, limited lake access points, and other similar activities by the visiting public. New private floating facilities may be permitted in these areas in accordance with the shoreline management plan.
  - **Wildlife Management:** lands allocated as habitat for fish and wildlife, and are generally open for hunting and fishing.
  - **Future/Inactive Recreation Areas:** Lands intended for recreation, but which were never developed or have been closed.
  - **Vegetative Management:** Lands designated for stewardship of forest, prairie, and other native vegetative cover.
- **Water Surface:** For those projects that administer a surface water zoning program, this will be included in the Master plan revision process.
  - **Restricted:** Water areas restricted for project operations, safety, and security purposes.
  - **Designated No-Wake:** To protect environmentally sensitive shoreline areas, recreational water access areas from disturbance, and for public safety.
  - **Fish and Wildlife Sanctuary:** Annual or seasonal restrictions on areas to protect fish and wildlife species during periods of migrations, resting, feeding, nesting, and/or spawning.
  - **Open Recreation:** Those waters available for year round or seasonal water-based recreational use.

These land and water classifications are established in the master plan and will guide future updates to the operation management plan and shoreline management plan, which implements the master plan.

## Project Timeline
