# Greers Ferry Lake Master Plan

The Little Rock District is updating the Greers Ferry Lake Master Plan.

The District has prepared a draft master plan and draft environmental assessment (EA) to evaluate the potential environmental and social effects of several master plan alternatives.

## **Your input is important!**

Your input will help define the final Greers Ferry Lake Master Plan and EA scheduled for completion in 2019

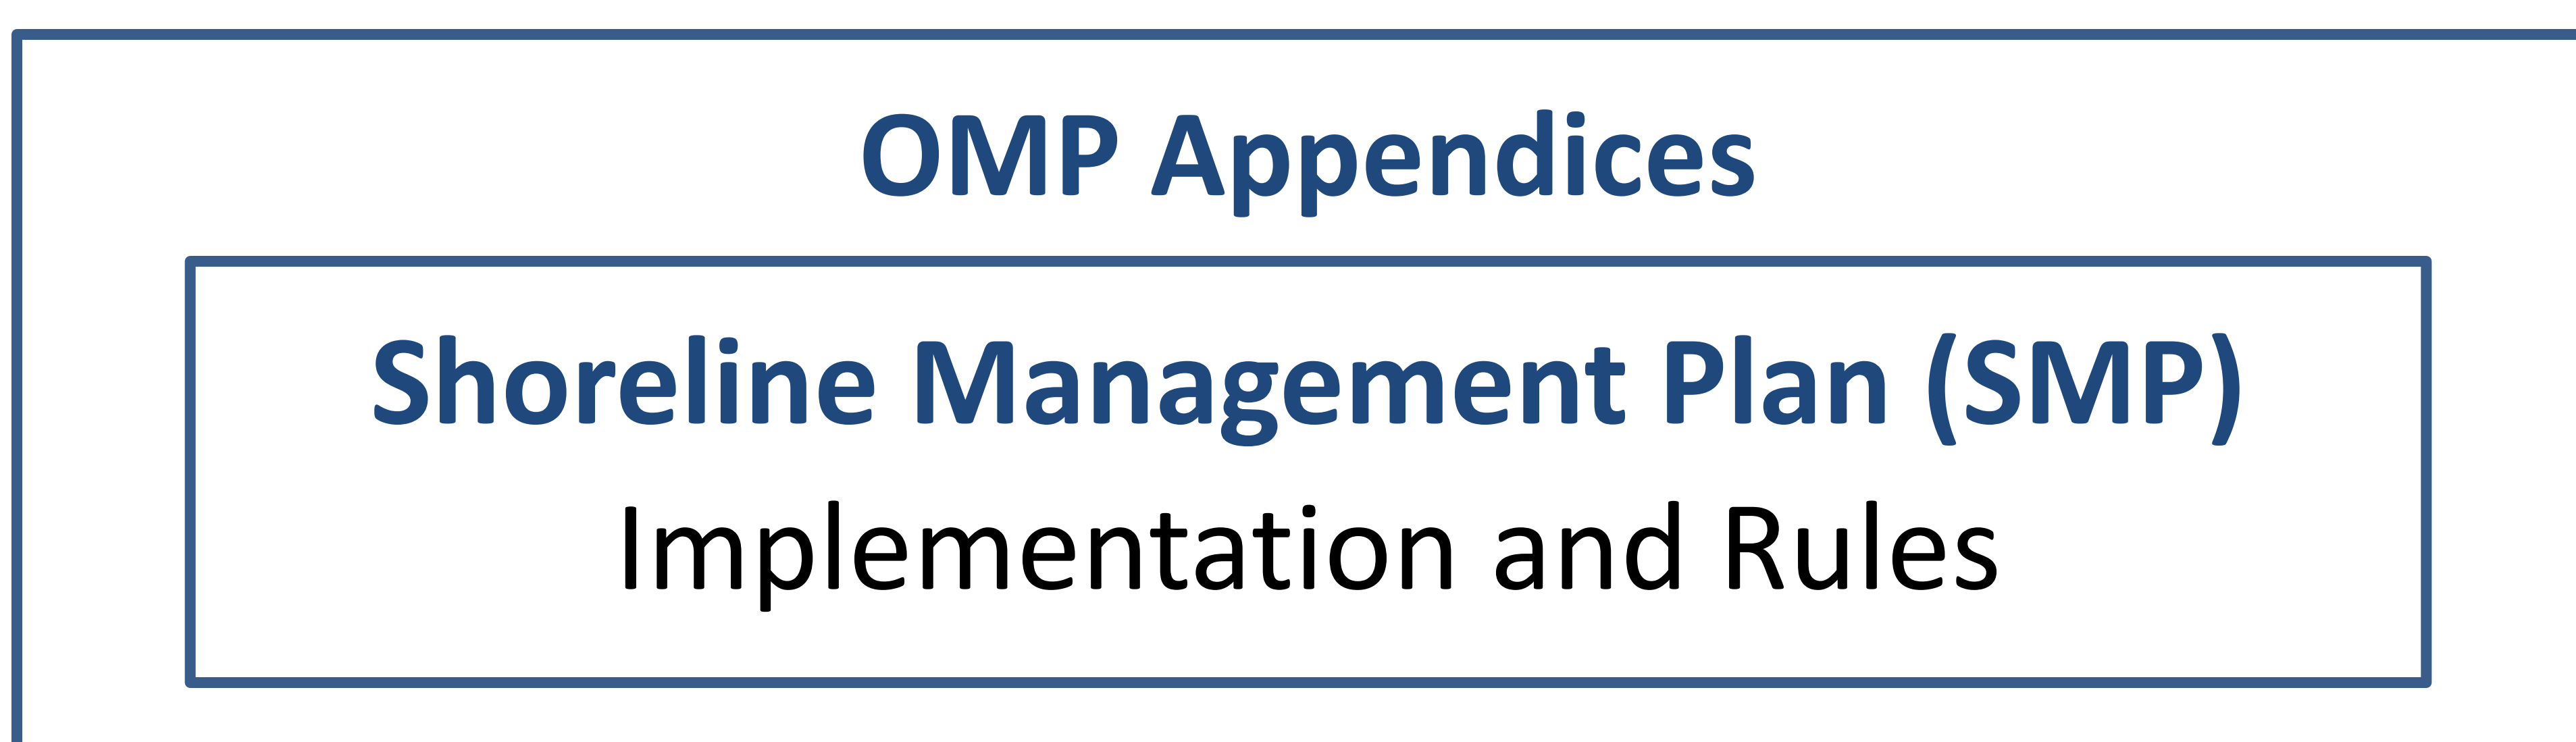

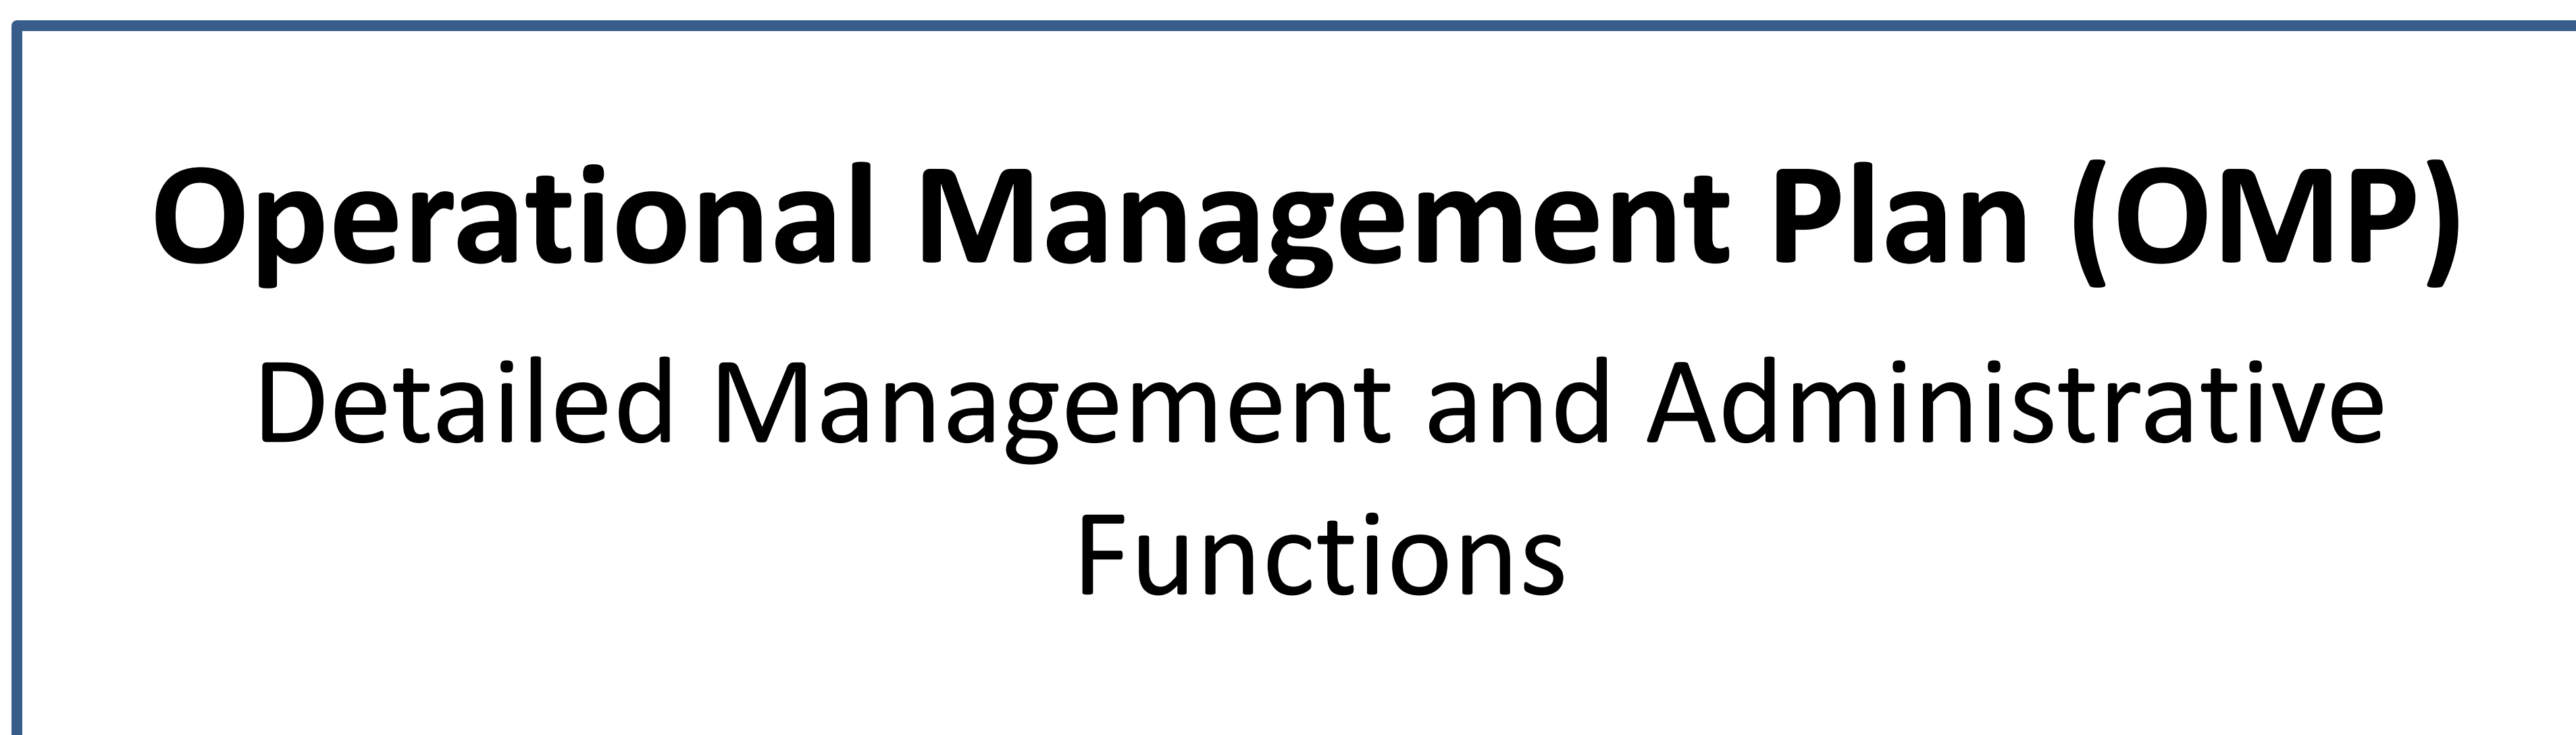

Please let us know:

- ✓ Which alternative do you prefer and why?
- ✓ Were all of the environmental resources and potential impacts discussed?
- ✓ What changes, if any, would you like to see in the final documents?

# Why Revise the Master Plan?

- The current plan was developed in 1976;
- Ensure accurate land classification and resource protection for future generations;
- Current Corps policies/regulations, budget processes, business line performance measures, and priorities are not reflected;
- The existing plan format and mapping technology is outdated and not compliant with current Master Plan format and technology requirements;
- Customer uses have remained similar, but trends, recreation equipment (i.e RV size, vessel size, etc.), facility use (amp service, wifi, etc.), and service demands have shifted since approval of the last master plan in 1976; for example, there has been an increase in visitation, tourism, and adjacent development;
- Demands on fixed resources challenge the existing master plan;
- Partners and stakeholders are engaged with the Corps and seek to increase and sustain benefits provided by the lake.
