RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Adams_V-W

Victor Adams

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

The sell out of Bear Deck Shoreline water control & drainage into the lake. The
increasing Real Estate Developers - Dock Builders - All lobbied with political
connections. This has destroyed all existing property/docks & hard public
infrastructure expansion that keeps the water from being controlled.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Very stayed vigorous protection of shoreline & water with
Dock expansion program - with political strings to left market and
federal legislation water protection - lack of.

Comments on the 2014 Master Plan: At the heart of the development was strong
management & protection of our valuable resource Table Rock Lake.

Not so now with the expansion & sell out of dock "break down".
Compare with the old plan. We will plan on building community.
* Stay clear of the plan. It should not be pushed or passed - *

I would like to be able to remove the invasive cedar trees that restrict the hard wood trees from growing tonyheir potential. I would gladly plant one hardwood tree for every cedar tree removed

20170915_Ashford_G

The Table Rock Lake area is great place to visit, work, or live.

Why is the 2014 master plan being up-dated ?

Is this effort cost effective and why.?

Has the Corp considered the hours the general public has and will spend in this process and the overall negativity impact to State.

Have any land owners around the lake provided concerns with the Corp regarding any part of these proposed changes?

Do Not make any change listed on the draft

Ideas

Work with counties around the lake to set and enforce waste water discharge from private land owners septic systems.

Set a standard that all exhaust from boat engines be under water to reduce noise.

Provide trash collection containers at all ramp locations.

Communicate by E-Mail with dock permittee on any known lake concerns they need to know about which may impact docks / slip owners.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

2 things 1 Making all docks go to solar power except
Marinas. I don't think its fair making existing docks with electric
go to solar. The cost is too high and there are not enough contractors
to do the work so the cost will be even higher. 2 Removing buoys.
We lost our 14 2015 Flood and before it was replaced buoys went
fast past our dock even though there is a dock across the Cove

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

less than 200' between our 2 docks. Most boat owners that
don't live on the lake don't know the laws or don't care. it
is going to pay for the damages to our docks and stop the careless
boaters. A sign is ignored. we tried that before.

Comments on the 2014 Master Plan: These are 2 major impacts to the plan
that only affects us dock owners and not the marinas. All 3 of our
dock owners can not afford to go to solar. Our electric meets all
codes and floods do not affect our lines. too many boaters ignore
the laws because either don't know or don't care. I was threatened
by a couple people when I asked them to slow down.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? ① We agree that new docks should be solar but requiring wishing docks to connect is cost prohibitive and unnecessary. ② We don't understand the reasoning behind the proposed rule to eliminate stanchions, skiffboards etc. life jackets, chairs & fishing equipment on the dock? Older people want carry these items back & forth especially when you also propose to eliminate parking on Corps land ③ Eliminating "no wake" buoys" on front of docks is a safety issue! The buoys been designated where swimmers can safely swim and help close boats go by the dock. Sometimes its hard to judge 100 ft. on the water.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? More restrictive vegetative permits and other changes (proposed) would cause more debris on the lake, harbor pollution and eliminate embankment shoreline. This is drastic change from the existing plan which already preserves 95% of the lake shoreline from disturbance and appears to be working very well. We would like to know what determines a sensitive area and how is this relevant when its not been addressed in the past? Why revoke vegetative permits issued in the past?

Comments on the 2014 Master Plan: The lake carrying capacity issue is relevant but we believe it needs to be looked at further. Giving the Corps carte blanche authority to limit who uses the lake on what days without strict guidelines would cause all kinds of issues for everyone including the Corps. The economic impact of surrounding communities, campgrounds, motels would be disastrous. It seems to us that many of the proposals don't make sense and would be costly to change. We appreciate the Corps. foresight and diligence but this seems to be overkill. Thank you for the opportunity to comment

TO: Corps of Engineers Decision Makers

FROM: Charlotte Barnes

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Barnes_C-W

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Beaty_M-W

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Please if you would please re-consider the amount of Lakeshore that you make available for boat docks. The use of Boat Slips in this area is so important to the owners of Lake property. I do understand that there has to be a limit ,but I believe the current limitation would affect the property owners use of the lake and would negatively affect private property rights.

20170915_Blitch_B-WA

I hope you would please re-consider the limitation on boat-slips . There is so much room on our lakes and if managed properly I believe we can keep the area clean with additional boat slips allowed . There are may private parties that help keep the lake clean at the present time ,and I would rather see additional ways to keep the lake clean rather than limits on private property owners losing the right to have boatslips to use. I hope you would please re-consider this when finalizing the Master Plan.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Bill Blitch

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Although I am in favor of alternative energy for the docks, it seems like this is too much too quick. Docks using solar energy are experiencing LOTS of problems. More work needs to be done regarding this topic before required changes should be made. Also, the proposed changes to the shoreline will be detrimental to wild life as well as to the aesthetics which make this lake so unique. Protect and guard the shore! we don't want to ruin this amazing resource for recreation, relaxation, etc.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? It is outrageous to think that allowing additional access opportunities, docks, slips, and boats will not adversely affect our lake. Water patrol is stretched thin right now. Safety is of the utmost importance, and abolishing no-wake bouys does NOT make the lake safer! There are so many boats on our lake, and so many boat drivers do NOT understand or know the boating rules and regulations. Adding more boats, docks, etc. will not help make this lake better, safer, or more enjoyable for anyone. Furthermore, more boat

Comments on the 2014 Master Plan:
traffic, especially the bigger boats, erode the shoreline and have a negative impact on the environment and the wild life. The fishermen are already feeling the impact of over-crowding on the lake, and these proposed changes will only reduce their desire to make Table Rock a destination. For us "locals," it will rob us of the use of the lake almost entirely. Don't allow this lake to

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

1 2 3 4 5 6 7 8 9 10
Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

Feel you are putting people & property at risk by removing buoys.
Have you ever been on a dock when boats come speeding into cave?
You could get knocked off. Dock & boat damage occurs too by the
violent shaking of the docks. Need restrictions.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? It is ABSOLUTELY crazy

Unfair to expect private docks to go solar. If marinas & resorts are safe
enough then our docks are too. After the flooding this spring since
there were no electrifications I feel they are all safe enough. One
agent at meeting said the change was aesthetic. Get Real! We need
safety. Docks need to be lit at night for boating safety & property protection

Comments on the 2014 Master Plan: What happens when batteries on solar unit don't get

charged. then freeze. do you really want battery acid pouring into
lake. We cant spray bugs. have to use special boat wash. but acid is
fine. We have not had recent electrifications & you regularly inspect
so feel this plan is nothing but unneeded burden on dock owners

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Brinley_N-W

20170915_Brosnahan_M

Before the Corp comes up with a SHORELINE (my emphasis) Management Plan, it must come to grips with the fact that Shoreline is Shoreline and Table Rock Lake (TRL) has 758 miles of it. Merriam-Webster defines shoreline as the "land along the edge of an area of water such as ocean, lake etc". If it's your policy to establish "guidelines for the protection and preservation of the desirable environmental characteristics of the shoreline", the policy must cover the whole shoreline, not carve out a distinction between the affluent and well-connected, that is Big Cedar Lodge owners, other Commercial Concessionaires, and the common man. "One size fits all" truly applies here. The regulations and all of the ramifications as they apply to the shoreline definition we just agreed to, must be consistently applied along ALL of the 758 miles of shoreline. An example of your logical conclusion is that the 200 foot maximum setback from habitable structures for mowing and under-brushing must apply to Big Cedar as well as myself.

Secondly, you must face up to the fact that while for the most part you have great staff at the TRL office, you are severely understaffed to the point that you cannot enforce the current regs with that staff. For example, your current staff is months behind in renewing existing Shoreline Use Permits for vegetation modification (mowing) and approving new applications. More regulation for the sake of regulation will do no one any good and will accomplish nothing when the staff cannot police clearcutting lots and cattle lolling in the water just West of the Long Creek Bridge (picture supplied to Ranger at Chateau meeting).

Thirdly, as you will conclude if you face facts with an open mind after reading my arguments, there should be NO change to the existing plan, except extending the existing regulation to all. Among many of the points you put forth for discussion that should be dismissed are your suggestions for Solar Power, Removal of Buoys, and Slip Size.

So let's begin with some details.

No Wake Buoys. Leave existing reg alone. No change. Again, what is good for the goose is good for the gander. The reasoning for a No Wake Buoy in front of my dock is no different than the reasoning for a No Wake Buoy in front of Big Cedar. If you are taking buoys away from private docks, your logic would also apply to Big Cedar. If your premise is that the law requires boats to operate 100 feet from a dock and therefore there is no need for the buoy, I'd like to tell you of the time a three year-old was slammed into my dock by the wake of a boat roaring very near my dock without regard of the 100 foot law, but before I was allowed to get a permitted No Wake Buoy. I still get wakes from the bigger boats that you have allowed at Commercial Concessionaires, but they are not running right next to my dock as they round Point 2 as they see the buoy. Most rental Boat operators and many boat owners are ignorant of the 100 foot law and need the visual reminder of a buoy even though they are going too fast to read it. They just know they should stay away. Removal of the buoys will put the private parties that you have established guidelines and policies to protect, at severe risk for bodily harm, and increase the likelihood of extensive wake damage to the docks themselves.

Solar Power The Trump Administration in February issued an Executive Order to all government agencies that requires them to justify any new regulation that would impose an

additional financial burden on the consumer and small business. For each new reg issued by an agency, two must be eliminated. Under separate cover I am asking my US Congressman and US Senator to investigate how the Corp of Engineers can impose a regulation demanding the removal of electrical power to all docks and install solar power at the cost of thousands of dollars in violation of the Executive Order.. Does the Corp have any idea of the cost of solar power on a 20-slip dock that will lift boats that weigh 5-10,000 pounds simultaneously? Then let's add in the cost of rebuilding the docks to handle the weight of the batteries. Is there a solar system designed with enough power to lift the boats at State Park Marina and Long Creek Marina? Now I would like you to answer the following question for me (brosna504@gmail.com). Under our present regulations at TRL, we have our docks inspected every five years by an electrician. How many deaths or severe injuries have there been at TRL (not Lake of the Ozarks!) in the last five years. Perhaps I have not looked in the proper places, but I have not found any. If you say overhead and/or underground power on private docks is dangerous, the same statement would have to apply to Big Cedar etc. Of course, you would apply the same regulation then to those Commercial Concessionaires: no underground or overhead powerlines. If you feel the number of electrocutions at TRL is excessive, might I suggest instead that all electrical service on Corp property be annually inspected and certified by a Licensed Electrician that the service meets all International Codes. He or she would lose their license if the document is not accurate.

Slip Size Again, please simplify the regulations. If Long Creek and State Park Marina can allow many fifty foot boat slips, the same rules should apply to me on my private dock. Actually, I agree with reducing the width allowed on private docks to 12 feet on private docks. But a 14% reduction in the width of private dock slips, should be accompanied by a 14% reduction in the width of size of future commercial concessionaire's slips and renewals. There seems to be an over-emphasis on Twin Island Estates mowing permits while a blind eye is being cast on the real culprits of erosion, the three and four foot wakes from very large boats dragging their stern as they plow along the shoreline, and also severe erosion done by the lake levels not being dropped fast enough after our many recent floods. Let me take you on a tour of the shoreline to show you the damage. The damage has not come from the landowners along the lake mowing 100-200 feet from the foundation of their homes. If you truly want to stop erosion of the shoreline, reduce the size of big boats on the lake. The way to do that is to control slip size. Control slip size you control boat size. Perhaps the Corp should send a representative to the state of Indiana where they are studying the effect of big boat wakes on the shoreline of Indiana lakes. One of the recommendations they have studied is to limit boats on the lake surface to either 300 feet or 500 feet from the shoreline! At your public hearing on July 31st, I picked up a handout entitled "Table Rock Lake Shoreline Management Update". On the second page under Shoreline Zoning Discussion Points, you state "In accordance with (36 CFR 327.3) we will look at Commercial Marina Expansions as alternative to additional private or community docks". Again, your bias toward Johnny Morris et al shines through at the expense of the considerably more private stakeholders. Please excuse MY bias again but I would ask the author of the suggestion to call me, unless he is a commercial concessionaire. He or she should tell me where in that reg does the Corp feel it is mandated to look into further Commercial Expansion, which would lead to more big boats, more shoreline erosion, more inexperienced rental boat

owners, unlicensed under-aged wave runner drivers etc. That reg does NOT cover Commercial Marina expansion nor does it require you to look at commercial expansion at the expense of the 13,000 true stakeholders in the shoreline.

Shoreline Management Plans Developed from Flawed Focus Groups. Let's remember that the review we are participating in, is of the shoreline of TRL, not of tourism in the city of Branson. Having been a bank president of a bank in a large bank holding company, I've participated in many focus groups over the years. Results are almost always slanted when one writes the questions, and handles the interviews themselves. You need independence. In this case it is worse. It is my understanding that the focus group was made up of businessmen and women, attorneys, shop owners, architects and a few private citizens, mostly from Branson. This study is reviewing the TRL Shoreline, not tourism in Branson. Yes, perhaps one focus group should be composed like you did but SEVERAL groups should be comprised of real stakeholders in the Shoreline: owners of the 11,000 privately owned land parcels, 1900 active private facility permit holders, owners of the 13,000 slips owned by private parties and the 15 commercial concessionaires (the numbers are yours). Thinking about those numbers, do you really think your focus groups gave you valid data about what the 13,000 true stakeholders in the shoreline wanted? Of course not. Therefore, I would ask that you suspend the arbitrary dates you have established on your calendar, and hire an outside firm such as Fleishman Hilliard or some other such firm to prepare the questionnaire and conduct focus groups from the appropriate number of real stakeholders of the shoreline. At the completion of those focus groups please come back to me and say that all of the shareholders of all of the shoreline want smaller slips, no buoys, solar power on their docks, and further expansion of the commercial concessionaires.

Other Under your "Update, Major Items for consideration", you list as one of your ideas "only issue new dock permits/slips that are within 200 feet of parking on private property". In areas like Twin Island Estates 5 or 6 lots, all adjacent to TRL might be more than 200 feet from their dock/slip. You keep running this proposal out every year or two. I simply will not work and needs to be permanently put to bed by the Corp!! This would prevent some prospective homeowners from purchasing a slip and would severely impact some home values. Another idea was to "require applicant to obtain a registered land survey for private property adjacent to government land". I already have survey monuments installed by the US Government on my property. Now I have to do it again?? What, you don't believe your own survey teams? Sometimes I wonder who dreams these ideas up.

Thank you for requesting our opinions. We hope that you listen to them and leave the regs basically alone. Simply make them effective for everyone.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Brown_C-W

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
we don't want guidelines that will limit what little we do have,
as far as trimming is now allowed, with permits.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

We MUST have "low wake" buoys. They work.
Signs on docks won't be looked at by boaters.

Comments on the 2014 Master Plan: forcing change-over to solar on docks is
not being thought of!! The change is huge cost, the up-
keep would be extremely costly. Battery disposal is
NOT green.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?_____

I believe that the requirement to have all docks on solar power by 2027 is not reasonable or safe. The amount of equipment necessary to be placed on the dock takes up much of the walkway of at least one dock slip. I have seen several solar powered docks and they loose significant space due to the solar equipment and batteries. In addition, the safety of the environment is jeopardized should that dock sink or flip when in a storm. All of the battery components enter the lake. We have a safe dock currently and are looking into additional equipment to be added to prevent electrocution. I understand the attraction to solar power but the expense to remove existing electric is an undue hardship and the effect on the environment due to a spill, and the loss of dock space are why I oppose it.

Subject: Comments re: Shoreline Management Plan draft

My comments regarding the proposed new Shoreline Management Plan are based on the information being presented to the public by SaveTableRock.com

Alternate power

Require any new docks and those that have never had power, to install an alternate source. You could also include docks that are being torn down and rebuilt.

Grandfather those with traditional power until such time as they do not pass electrical inspection at renewal time.

Giving a 10 year timeline to convert to alternate power could prove a financial hardship to many. Another drawback to alternate power is the potential to burn up small power tools, battery chargers, etc., as reported by those who use these items on solar powered docks.

Another concern, however it may be extreme, is the dumping of dead batteries into the water instead of hauling them off the dock and recycling.

20170915_Burns_R

Non-transferrable vegetation permits

Vegetation permits should be reviewed and inspected when a property is sold, even if it is to a family member. This ensures that the new owner is not blamed for actions of the previous owner. Being non-transferrable does not mean that a vegetation permit will not be issued.

I feel that the wording on this issue by this group, is being used as a scare tactic.

Dock modification

This is one area that I totally disagree with.

The sale/change of ownership of boat slips is a very common occurrence and more often than not, there needs to be some modification for the new owner. Only allowing 1 dock modification request per every 5 years, the loss of potential income to many of us doing business around the lake would be great. It would not only affect those of us that build and modify boat docks, but could very much discourage the sale of a home with a boat slip or dock included.

I realize that this change may have a lot to do with decreased manpower and trying to reduce paperwork, but there needs to be another solution.

One solution could be a call to the corps office with request. If request can be granted from the office by reviewing pictures and data in corps database, approval letter is then required from slip owners and email approval is then sent to the permittee. During physical dock renewal inspection all changes are noted and listed on renewal letter. Permit renewal is not granted until new stamped engineered plans are submitted with other renewal paperwork. This would force the slip owners in the dock to police themselves and make sure slip owners do not make changes without consulting the other owners. Risk losing permit or assessed a heavy fine if the rules are not followed.

Storing of items on a dock

I find this statement from this group to be ridiculous. I found nothing in the draft to indicate that this was not allowed. I did see in the section for Unauthorized Activities, that personal items could not be stored on corps property. However, the items listed were items that would be on corps property surrounding your home, not on the dock. It states in the boat dock section that the items this group has listed can be stored in dock lockers.

Boats with holding tanks

All existing boats of this type in private or community docks should be grandfathered. Allow boats of this type in a new dock if they are not longer than the slip they are going in to.

No wake buoys

Most no wake buoys are not maintained as they are supposed to be and boaters seem to disregard them. A sign on the dock is not going to make any difference. Serious boaters should know the "rules of the road" and if they don't, get the boat numbers and turn them in to the water patrol.

Parking of golf carts, etc

I don't see where this rule has changed, so I really don't know what they are upset about.

Carrying capacity

I'm not sure I totally understand this proposal, but it sounds like right now it is something that is being monitored and not going to be implemented any time soon.

As a business owner, private dock owner and someone who lives lakefront with a vegetation permit, I find some of the items this group is posting to be a scare tactic.

We build boat docks and boat lifts for a living and have been in business for 25 years. I talk to many people daily regarding docks, lifts, the corps, etc., and the majority of the comments about the draft are regarding the alternate power, however, I'm amazed at all the misinformation and rumors that are being passed around.

I have been enjoying this lake for over 50 years, coming here for vacation every year from Illinois and now having lived here for 25 years. My parents passed on their love of this lake and area to us, as we have to our kids and grandkids.

While I may not always agree with some of the things that the corps does, I appreciate their hard work and commitment to keeping our lake a beautiful place.

Thank you,

Ruth Burns

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

If anything, the size of boats should be limited. The big wake boats taking on ballast and oacen sized boats is what is harmfull to other boats and people. Please, please, PLEASE, don't let this be another Lake of The Ozarks.

20170915_Burt_B-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Becky Burt

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

the requirement for solar power is clearly a major change. The cost is not only panels but backup power in winter and the maintenance of the system. Since this subject was not brought up in the public meeting I attended I fail to see the logic of adding it to this plan. The power provided by the lake is a given.

The requirement for solar power is clearly a major change. The cost is not only panels but backup power in winter and the maintenance of the system. What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

- ① THE REQUIREMENT FOR SOLAR POWER IS CLEARLY A MAJOR CHANGE. THE COST OF PROVIDING BACKUP POWER FOR WINTER FISHING, LOANS ETC WILL NOT BE MINOR. THIS SUBJECT WAS NOT BROUGHT UP AT THE MEETING I ATTENDED. MOST EXIST DOCKS ARE NOT DESIGNED FOR LOADS FOR PAVES & ACCESSORIES
- ② 12' DOCK WIDTH IS NOT ADEQUATE FOR HOBBO BOATS

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

- ③ THE PLANS NEEDS A NEW LOOK
SOLAR IS NO GREENER THAN HYDRO SO THIS IS
JUST A WASTE OF RESOURCES

Subject: [EXTERNAL] Table Rock Shoreline Management Plan

I tried to send this earlier with a different email system, but it doesn't seem to have gone through, so trying again. As indicated below, I would appreciate it if you would acknowledge receipt by hitting reply and sending.

My comments on the SMP are as follows:

Carrying Capacity – I've looked at the calculations that were presented for determining the carrying capacity of the lake and I'm baffled at how it was concluded that the threshold is 30,806 access opportunities. There is over extrapolation of the limited data included in the analysis and the methodology is suspect. There are a number of problems with the data used, which are beyond the scope of this discussion, including that the time period evaluated coincided with a recovery from an extreme economic recession. I'm not implying that the methodology overstates or understates the carrying capacity, simply that the data are not sufficient to be drawing a conclusion on an appropriate limit for the lake carrying capacity. I believe that at this point it should merely be identified as an issue that requires further study over additional time. [As an incidental issue, it would be of interest to know what figure was considered as the usable surface area of the lake, since the total boats in use at carrying capacity was determined to be 3,334, which doesn't seem to correlate well with the 10 acres of surface area criterion that was stated.]

Permits to Modify Docks – I don't understand the reason to limit permits for modifications to once every 5 years. I don't believe that there should be a limit established at all, but once every 5 years seems particularly overly restrictive for dock owners that may want to make modifications due to changing circumstances.

Alternative Power Sources – What is the rationale for wanting to change to alternative energy? Has a cost benefit study been done? I would expect power usage on a dock to represent a low capacity factor usage, so energy savings are not likely to justify the capital costs, particularly for existing docks with external services already provided. There will also be potential complications with weather and other reliability issues.

Vegetation Modification Permits – I recommend against the restriction on mowing or under brushing across any natural or manmade break.

No Wake Buoys – My experience with signs on docks is that they only result in drawing boats to the docks to see what the signs say.

Private Floating Facility Permits (Docks) – "Docks are approved for the mooring of the owner's vessel and the storage of gear essential to the vessel's operation. No other equipment or personal property is allowed to be stored on the dock." I don't understand what the Corps is trying to accomplish here. Boat

docks typically serve many purposes beyond simply mooring a vessel and storing gear. For example, fishing, swimming and other water related activities, picnicking, relaxing, etc. These other uses are integral to the lake experience. I don't believe the Corps should try to set any general limitations on use or storage, other than to prohibit specific activities that might be harmful to the lake or other users. Community Docks – "Shoreline Use Permits for community docks are issued to a community dock association." Do all community docks have (or are required to have) community dock associations? My impression when we were looking for property to purchase is that some community docks do not have formal dock owner associations.

Dock Access Requirements – With the change in dock size restrictions, there should be allowance for different access requirements. For example, the exclusion from a dedicated parking requirement for a single owner dock should also apply to a multiple owner dock where all owners are also adjacent landowners.

Storage Lockers – "Prior approval is not required for the installation of lockers; however, lockers must be shown on the engineer certified docks plans provided to the Table Rock Office." This requirement is unclear. Since prior approval is not required, in the case of the addition of a locker, the plans already on file would not show the locker. Surely it's not intended to require that engineer certified plans be prepared and submitted just to show the addition of a locker?

Personal Watercraft (PWC) Mooring – Similar comment to above for Storage Lockers Deck Over – Similar comment to above for Storage Lockers Exhibit B – Item 1, I believe the Exhibit reference was intended to be to "C" rather than "B."

Exhibit B – Item 14, As I indicated above, I don't understand the purpose of this item or the intent of the "limitation." Boat docks typically serve many purposes beyond simply mooring a vessel and storing equipment. I don't believe the Corps should try to set any general limitations on use or storage, other than to prohibit specific activities that might be harmful to the lake or other users.

Thank you the opportunity to comment. I would appreciate your consideration of my comments.

Please hit reply when received to acknowledge receipt.

Regards,

Rich Chapman

Strongly Disapprove Difficult to understand all Plans. Strongly Approve No Solar
* No change - add No WAKE in COVES (small narrow)

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Please, don't take away our bays, that protect us from fast moving watercrafts in our narrow no outlet cove PLEASE!! OR Bring Back NO WAKE in our small narrow cove, such as Aunt's Creek and South Aunt's Creek like we had before. Fast moving wake watercrafts are tearing up our Cove and destroying the shoreline, disrupting wild life and our way of life.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

without bays or NO WAKE, it is dangerous now and will become even more for swimming and being on our docks and shoreline.
The high water and wave action (2 to 3 ft high waves) from these watercrafts are destroying our beautiful shorelines, killing trees, eroding, making banks, giving us no place to walk or move our boats. These shorelines are our Natural History, treasures for our children to explore and enjoy with safe places to picnic and enjoy the beauty of TABLE ROCK.
I want to take my family and friends to distant shores. Kayak safely. It's not all about boating and fast moving watercrafts!!
If you take away the bays put a NO WAKE area's for families, fishermen, wildlife enthusiast, non motor craft. FOR safety, preservation, and quieter places that protect our Environment!!! That's a lake for ALL People!

How will Solar support nighttime use along with security lights and daytime use?

I feel the expense is difficult for seniors and families. We all are not wealthy. Perhaps a Government Grant would help

Thank you for your help. 20170915_Chappell J&S

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Cheney_B-W

Brooke Cheney

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

If the wheel is not broke don't try to fix it. Everything is working well now don't screw it up.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

20170915_Christensen_S-WA

Sincerely,

Scott Christensen

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

The current way Table Rock operates is working. These changes are not necessary and will be very burdensome financially and make no sense. What is the reason for not being able to store your fishing or ski equipment in your locker on your dock for instance. How is this negatively impacting the lake. How are you going to keep people from stealing batteries off docks and/or throwing them in the lake. The

20170915_Christopher_M-WA

beautiful, clear water could be severely jeopardized. There are many senior citizens who cannot afford this.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Maureen Christopher

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

* Solar Power For Docks - we believe this would be a large expense for dock owners
* NO Wake Buoys - These should remain in front of docks for the safety of all!!!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Comments on the 2014 Master Plan: There should be more consistency in remarks when dock permits are re-newed one time nothing will be said about something on the dock & the next time the very same thing will be something that has to be removed or changed!

To: CESWL-Table Rock Shoreline Management Plan Update <CESWL-TableRockShorelineManagementPlanUpdate@usace.army.mil>
Subject: [EXTERNAL] Comments on the proposed Tablerock Shoreline Management Plan

I understand that the time frame for comments was extended until September 15, 2017. Accordingly, as a property owner and dock permittee on Tablerock Lake, I offer the following thoughts and suggestions.

First of all, I can appreciate the complexity of managing this public resource in a responsible manner due to the multi-use nature which accompany these large reservoirs. While Tablerock Lake, along with other similar reservoirs, were initially built to help mitigate floods and generate hydro electric power, I am sure you will agree that Tablerock and other similar bodies of water create a huge economic, recreational and lifestyle opportunity for local communities, tourists and those of us who call Tablerock our home or home away from home.

First of all, I for one am all in favor of responsible management of this lake with emphasis placed upon preserving the natural community that was here long before this lake covered its valleys. There of course has to be "balance" and "compromise" by all parties, including the Corp of Engineers, in how the land surrounding this lake should be managed. I am sure you would agree that none of us want to create a situation like exists at the Lake of the Ozarks with wall to wall commercial development and dangerous waters created by irresponsible lake and shoreline management. However, from a common sense end-user perspective, there has to be some leniency in some of the restrictions which are being proposed.

Regarding the Shoreline Power restrictions being proposed, if your concern is "safety", I fully understand the concern and would support more stringent requirements and inspections for permitted docks. I do not support, however, a moratorium which eliminates completely Shoreline Power in view of the current limitations inherent with Solar based systems. I have spoken with commercial entities which sell and service these types of systems, and they will be the first to tell you that these systems have very significant limitations and are not capable of keeping up with the electrical demands frequently found during heavy use periods or on docks where battery chargers are being used by fishermen to recharge deep cycle batteries.

Regarding prohibiting the use of golf carts or similar vehicles from accessing a dock is unnecessarily punitive to a great number of people who call Tablerock Lake their home or home away from home. I am sure that you understand that a good many of the Lake's residents and patrons are older individuals. While I recognize that the proposed regulations provide a process for acquiring a handicap permit for those who meet the definition of "handicap", simply being old, or very young, is not a recognized

handicap. Furthermore, even if such a provision were put in place, connecting a violation of this regulation to a potential revocation of a boat dock permit is not reasonable and impossible for a dock manager to effectively police. A more reasonable approach would be to continue the current practice of permitting reasonable access to docks in a manner which reduces shoreline erosion concerns.

I am not sure why there is a concern regarding "No Wake" buoys. I would be the first to agree that there are certainly boat owners and operators who fail to operate their vessels in a safe and responsible manner. While the "No Wake" buoys probably do little to slow down many of these operators, the Buoys at least keep the boats a safer distance from docks or other floating structures, not to mention help reduce dock and lift damage due to large waves. On a similar note, I am very much in favor of not increasing the size of boat slips allowed on permitted Tablerock docks; using Lake of the Ozarks again as an example of how not to manage a body of water, bigger boats translate into bigger problems for not only the lake but also the vast majority of people who use it.

I am all for keeping the current balance between permitted developed area around the lake and undeveloped "green" space. By doing so accomplishes many things that will help maintain the water quality and natural systems which would be put in jeopardy if a more commercially focused perspective were to be adopted. I can imagine that your agency is under regular and intense pressure from commercial developers and biased political officials whose only interest is in generating more revenue at the expense of putting at risk all of the qualities which makes this Lake special and worthy of our protection.

Thank you for the opportunity to voice my thoughts and opinions. I look forward to revisions in the proposed plan which factor these concerns into the final proposal.

Best regards,

James L Cole

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

The economic impact to the lake will filter down to a reduction of tax dollars that funds the government, thus we all lose. PLEASE Look at the bigger picture. The South West Missouri area already struggles with poverty and job opportunities. If you take away the tourist/second home owners it will reduce any jobs available and increase the poverty level we already have. The Barry County, Shell Knob School is already

full of low income, free lunch qualified children. This will have further detrimental consequences than I think has been thought through.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Trina Colwell

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

I'm aggravated at being crowded out of the use of my boat slip by the local pit bull owning parolees and nightly renters that don't pay a dime in property tax for being on waterfront. I pay over \$4k a year then you put restrictions that only affect us property and slip owners. You take out our buoys and put my kids and grand kids in danger. You make us pull electricity after paying to put on dock and paying to maintain at our cost and your restrictions. Now put in solar again at our cost for the thieves to steal. Most all boats around Long Point are being operated by inexperienced boat renters and they are so thick from May through August. I know you haven't studied that due to you have burn restrictions and the non taxpayers still have fires burning by my \$60k boat and \$40 boat slip most every night so it's obvious to us that its not them you will restrict or take off water. I will agree to all of your plans and restrictions if you will go to Taney county and have our taxes dropped by 85% and reimburse my investment on house, boat and slip due to not being able to use due to your restrictions on property owner and nothing restricting boat rentals, nightly rentals and non taxpaying locals; it only affects the ones of us who pay the taxes to be here due to we are the ones who will obey the restrictions, SMART!!!!!!

Now you drop registering boats to slips at corps office and that will open up slips to the use by nightly renters. You should send a trash truck at the corps expense to clean up at the Long Point public access. We are tired of cleaning up after non taxpayers. Please do not confuse our opinion as agreeing with the Branson board of realtors. We notice that as you choke out the property owner with more restrictions you give commercial property a full pass look no further than Lake of Ozarks to see the near future of Table Rock commercialized.

The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Crook_R-W

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

There is nothing wrong with the current regulations so it would be completely stupid to change it to what is being proposed. Maybe the Corps should be trying to help the people instead of try to help their own pocketbook!!! The proposed changes are WAY out n left field anyway!

20170915_Davis_D-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

There are already enough restrictions in place to keep the lake beautiful. Ideally, we should be discussing an easing of the current restrictions, rather than the imposition of more stringent ones. The most outrageous of these new restrictions is the requirement to change existing electricity to solar. What on earth is that supposed to accomplish, other than an undue expense to the dock owner? I read

20170915_Dove_M-WA

where it is supposed to be "safer". So does electrocution by solar power leave a person less dead than electrocution by conventional power? And when all these solar panels have run their course, does anybody have any idea how they will be safely disposed of?

I'm sure this comment period is designed just to allow the people a forum to blow off steam, with no intention of the government listening to our concerns. We can only hope that there are some at the decision-making who will take these comments under consideration.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Malcolm Dove

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? No mention of banning wake-boarding on the lake. These pulled by slow moving boats is the cause of erosion of the banks. Why are there new permits for docks when 'no wake' is not allowed behind the dock?? Mowing around area keeps grass growing, good vegetation & slows runoff

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

Comments on the 2014 Master Plan: Can you guarantee solar power to work on docks? Will all docks at Marina be solar? How will all boats be able to be let down & brought up several at a time?? For the most part homeowners & dockowners take care of their property & participate in annual cleanup of the shoreline. They continually clean up after weekenders who litter & abuse the lake. Your changes are punishing landowners & adding expenses to retirees that may not have funds. Thank you for asking for our input

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

The provision on moving to wind or solar power for private docks is absurd. This effectively means no power on the docks, because either wind or solar require massive battery assemblies, too heavy for existing docks. There are no problems currently with electric service to the docks, so why make this change? Is it to be "Politically Correct"? I am in favor of utilizing the current plan, with no changes.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

I am in favor of Alternative 3, No Change, but without the provision for a change to mandate Solar or Wind Power for docks.

Comments on the 2014 Master Plan:

On the section concerning Sedimentation, I am in favor of this consideration:

"Consider implementing policies for boat dock owners to improve the existing roadways to their docks and launch ramps to allow the capture of gravels and sediments." The Pathway to our dock is eroding, and we would like to have the ability to re-direct runoff water flow away from the eroding areas.

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

[illegible]

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Solar Power for Old Boat Docks
Removal of Buys is important they keep Jet Ski's Boats Buoy 100 ft. if you have trouble with Buys goe Dock & Size.

When you had me remove my garden I think it is wrong that
OTHER PEOPLE CAN'T GROW VEG.
What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding
of No Significant Impact prepared for the Shoreline Management Plan Revision?

I don't think single docks should be allowed.
we have all the rules on the boats just use them.

Comments on the 2014 Master Plan: I SAW NO SOLAR FOR OLD DICKS
IN THAT PLAN.
I CAN SEE PEOPLE SCALING THE SOLAR PANELS & BATTERIES.
Wt

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Etter_D-W

Dale Etter

- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

We bought a condo on the lake in 2010 and then moved to a house full-time in 2015. While we appreciate the Corp's management of the lake that keeps it from being over-developed, the proposed changes to the shore-line management plan are not necessary. Many of these proposals would be a financial hardship on property owners, not to mention make the lake a much less desirable place to live

20170915_Evans_R&P-WA

and vacation. We specifically take issue with the dock electrical proposal (especially when it wouldn't apply to commercial docks, but only us private citizens???), to the vegetative permit changes, to the "no wake" buoys being restricted, to the restrictions on what you can keep/store on your own dock, and the attempt to restrict the number of people on the lake. The current plan is working and we don't understand why the Corp has deemed these harsh changes necessary. PLEASE, listen to the public and people who live and play here, and DO NOT implement these proposed changes!

Thank you.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Robert and Phyllis Evans

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

you are making the lake very user UN-friendly with several of your proposed changes. You will impose enormous costs on retired people with fixed incomes + lower income people who enjoy this lake. Longterm, you could damage the entire regional economy. Money - and people -- go where they are treated well. And it won't make Table Rock Lake if you persist.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

please see enclosed sheet for further comments

To Table Rock Lake Shoreline Project Manager or Whom It May Concern:

The more I hear about some of the new regulations and penalties being proposed, the more alarmed and angry I am. I hope that you sincerely mean what you say about desiring public input into the revised draft of the Table Rock Lake Shoreline Management plan, and even more, that you will be open to changing some your plans if the 'public' pushes back. The 'public' has learned the hard way over many generations that "you can't fight city hall", and that government bureaucracies too often think of us as silly 'sheeple' to be sheared, taxed, herded, ignored, and otherwise exploited and controlled. So I'm going to assume that you really will read my comments, as well as the others coming in, and I will attempt to express my objections to some of your ideas as kindly as possible.

You are proposing a course that will make the lake very user-UN-friendly. There are people of all ages and socio-economic classes who enjoy the lake, but for example, 1) your idea for imposing solar docks will put undue financial strain on retired people on fixed incomes, and frankly, all but the more well-to-do. Money, and people, tend to go where they are treated well, and it won't be Table Rock Lake if you persist in making it expensive and difficult to access this lake. Longer term, your revised plan has the potential to wreak havoc on our entire regional economy. I'm truly hoping that this is not your desired outcome, a la Agenda 21 or some other nefarious globalist progressive social engineering scheme.

2) No parking on Corps property—Seriously?!?! Unless you are trying to chase people away from this lake, you need to re-think this. Contractors working on docks need reasonable access. And it's cruel to ask retired people, or handicapped people, or families with small children, or frankly **anyone**, to hike long distances to their docks and boats because they have to park some distance away, if they can even find parking at all. This is a do-over!!

3) One dock modification every 5 years—What is the purpose of this? Dock associations should be able to request modifications as often as needed. Enough said.

4) One boat every 10 acres—Who thinks this stuff up?! We don't need a one-size-fits-all for a lake this size. There are areas of the lake that don't have much boat traffic at all, and others that do, so why not figure something out that's reasonable for the more densely populated areas. And don't make your revisions based on boat traffic density of the 3 -4 holiday weekends per year. A lot of those boaters don't live here, so don't make all of us suffer for patterns of use that don't apply year-round.

5) Size of slips to be down-sized – Some people have houseboats—are they going to fit in a 12 x 30 slip? Are you trying to use this new regulation to ban certain types of boats? If so, why not be upfront about it?

6) No Wake Buoys—A lot of us dock owners want to keep these. We see it as a good safety feature for families using their docks for swimming etc., and it helps limit wear and tear on our docks. If you're going to ban something, ban those 'Big Wake Boats' (or whatever they're called) that create bigger-than-normal waves that slosh against the shore line.

7) Can't store fishing equipment, tubes, chairs, etc. on docks or even in a dock box—Why??? So now we can't park near our docks, plus we have to haul everything, every time, who knows what distance?!

I could go on...I further object to your tightening the vegetation management, and the draconian penalties being proposed for breaking your onerous proposed new rules. Please remember that we are your fellow citizens interested in having a clean, beautiful lake just as you are, so make us your partners with reasonable regulations. Do not alienate and abuse us!

Vaida Falconbridge, Shell Knob, MO

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

- I thought Schur was a great choice for safety reasons, but after talking w/ an electrician he says the risks are the same. Still have to have a ground wire connecting it all together & generator has to be @ a safe location. So I don't think making dock owners have the extra cost is worth it.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

It is important to preserve the beauty, clean & peaceful environment of the lake, protecting wildlife & community stability. Example, without fishing tournaments & family vacations many people would be without jobs.

Comments on the 2014 Master Plan: I feel that in order to make wise decisions we need more information. I thought attending a meeting we would hear from the Corps the changes and be involved in discussions about what that means for our lake.
Thanks for all your work - hopefully we can find a balance.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
Opposed to over regulation; solar mandate; Max/Min
and "capacity" limits; How well that be implemented
What is "ACCESS OPPORTUNITIES"?

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?
If you remove buoys and we put up signs - PEOPLE
WILL IGNORE THEM. WHO IS GOING TO ISSUE
THE FINE. THERE ARE NOT ENOUGH PATROL
TO "POLICE."

Comments on the 2014 Master Plan: Instead of number of boats, why not limit
size or style of boat for "cigarette" boats or
motor-type boats with ballast to pull surfers.
They create a huge wake that erodes shore line,
dangerous to docks, fishermen, swimmers,
skiers. THESE BOATS HAVE RUINED LAKE OZARK.

Hello:

We have closely followed the recent discussions, and proposals with regard to the updated Shoreline Management Plan.

As long term Kimberling City residents, we are directly impacted by decisions made by, and for the Corps of Engineers with respect to access, and enjoyment of Table Rock Lake.

We were supporters of the changes made to Shoreline Management guidelines which went into effect in 2014, as they needed some updating at that time.

These new proposals, however, seem to be a significant over-reach, and will negatively impact our lakefront property values, along with access to the lake.

Changing the guidelines for Vegetation Control from the status quo, to the much more restrictive proposals will make it eminently more difficult for people to access docks, and shoreline. Walking on the rocky shore is challenging enough when you have a clear view of the rocks, and obstacles, but becomes dangerous if hidden by overgrown plants and weeds.

More importantly, the over abundance of ticks and chiggers endemic to the area represents a major health risk to those unfortunate enough to be bitten when walking through unkept vegetation. Lyme disease, and the discomfort associated with chigger bites would be a major impediment to lake access.

These factors are compounded when considering elderly, or seniors living on, or near the lake. It would be a bad situation, compounded by unnecessarily restrictive regulation.

Likewise, the proposal to entirely eliminate no-wake buoys seems counter-productive when viewed from both a safety, and property (dock) protection stance. The no-wake buoys certainly don't entirely deter, or eliminate dangerous and irresponsible wakes on the part of uninformed, or irresponsible boaters. But do you honestly believe eliminating the buoys would make things better, or safer? We think not!

20170915_Foss_R

Also, and this is a big point, a regulation to eliminate the storage of fishing and boating gear on docks, or in dock lockers is beyond ludicrous! The enormous draw of lake recreation involves fishing/boating/tubing/paddling/swimming with a float, and enjoying this resource whose construction was funded by taxpayer monies.

The economies of lake communities would suffer a major blow if these activities were "eliminated", or curtailed.

Also, the proposal to limit the number of folks using the lake at any one time simply boggles the mind! How would anyone hope to know some "magic number" which delineates between "just enough users", or "too many"?

If things are too congested in any one area, that will most likely take care of itself by boaters seeking solace in less crowded locations. It certainly does not rise to the level of beuraocratic micro-management, which rarely works anyway.

This entire plan seems to be a solution in search of a problem! We suspect it was heavily influenced by input from commercial operators at the lake in an attempt to further protect their exclusive "franchise" over resources.

In short, please don't implement these new rules. They will not likely help the lake environment, but will defintiley hurt those who have protected, and enjoyed this aquatic jewel for many years.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

- The proposal to remove shore based electrical services & replace with alternative energy sources (e.g. solar).
- Although 'safety' was given as the primary reason, no one at the meeting I spoke to could explain why in any detail.
- It was also explained that portable generation would not be allowed because that source was not considered 'renewable', but no answer was given.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

- When I proposed using a diesel generator burning bio fuel which is both alternative & renewable.
- The Corps person I spoke to also did not have a reasonable cost estimate & the environmental impact of thousands more batteries that will be necessary to support a 'solar' energy source.
- Also, the impact of several 'cloudy' days in a row was not well thought out.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Inclusion of docks permitted but outside the zone until now. The solar power is wrong because we have not had an electric problem on the lake. If it is that all new docks must be solar powered that is fine but all previous docks should not have to convert to solar. Solar does not change the fact that it is electricity on the water. The present buoy system is hard to maintain but "No Wake" signs on docks will not be respected. We need better enforcement on the lake. The ending of licensing for stairs on the lake is not a good thing. There are too many steep shorelines to docks and the elderly will be kept from using their docks when there is no way to navigate the steep and rocky shore.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Gaines_D-W

Joe Garza
23457 Fish Hook Ln
Cassville, Mo. 65625
Ro2626Jo@aol.com

US Army Corps of Engineers
Little Rock District

To Whom It May Concern

My Name is Joe Garza and for 40 Years I have had a lake house on Rock Creek on Tablerock Lake. I have seen a lot of changes over these years. Rock Creek use to be full of trees which made it good for fishing, somewhere along the way the trees were cut down when the water was low or were knocked down by boats. When I first came to the lake there were 5 docks on Rock Creek, two were covered docks with 4 slips the other 3 were 2 slip open docks for a total of 14 docks. About 10 years ago Big M Marina put a Satellite dock in at the end of the road on Rock Creek. It must have 20 or 30 slips then another dock with 20 slips went in then another dock with 20 or more slips. The docks are not the problem, its the people, they never leave the creek and go out on the main lake which means we have sometimes 10 or more boats, wave runners, and wake boats, you name it, its out there. They all go round and round in an area probable no bigger than 40 acres. A few years ago they Life Flighted 2 people out who had ran into each other on wave runners.

We have people who have Big Wake Boats which make Big Wakes going back and forth in this small area. They have Big Radio Speakers on their boats turned up really loud and they never leave the area.

I own 2 slips on a 4 slip dock all up to code, I have repaired this dock almost yearly due to boats coming to close.

Another issue is the Big Power Boats with open Exhaust, they go round and round and never leave the area. I would like to see the Lake Patrol come up the Creek more often, it is beginning to look more like The Lake of The Ozarks. I would also like to see a Noise Ordinance go into effect and a no wake zone Starting at the Big M Satellite Dock. That would fix a lot of Problems. On the weekends the Shoreline water looks like Mud after the weekend when all the boats leave it is again Clear and Beautiful.

Hopefully, you will address my Concerns.

Yours Truly

Joe Garza

Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

- ① Do not Mandate Safe Power on Private Community Docks
- ② Do not pull all the wake boaters from Lake - unsafe for Lake
- ③ Do not Exempt Commercial Docks from these Requirements
Commercial Docks do not even have their form changed to Encapsulated yet. If it is good for one it is good for all

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

The Lake is becoming more crowded every year. You do not need to encourage more Boats by allowing new permits for 1-12 stall Docks - You do not consider that most weekend Boaters are out of town Boaters that do not have a dock or slip on this Lake - nor do they know or abide by the Lake Regulations. They need no wake boaters for safety on the Lake.

Comments on the 2014 Master Plan:

There is nothing good about the proposed Slip P that I see it will make the Lake more crowded and more dangerous. More Dangerous means less friendly. Please keep our Lake friendly and stay with the current Slip with no new changes.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

YOU ARE DICTATING - we have little or no say - we payed
for our SLIP & PAY TAXES for it and dock fees - you do not
enforce if folks have an ATTY - money, or INFLUENCE.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

★ YOU CANNOT remove the BOOYS! You ALLOW big "surfing"
boats to pound the existing docks to death.
★ SOLAR ENERGY IS TO EXPENSIVE & ITS STILL ELECTRICITY
ON WATER - STILL A DANGER - BATTERY for electric
STORAGE is STILL DANGEROUS - SHUT OFF SOLAR power on
individual docks in flood conditions?

Comments on the 2014 Master Plan:

YOU WILL do what YOU WANT regardless of the
dock owners, TAXPAYERS, or anyone ELSE

Comments may be submitted via mail, email, fax or the project website with attention to: Table Rock Lake SMP/MP/EA Project Manager, Programs and Projects Management Division, USACE, Little Rock District, P.O. Box 867, Little Rock, AR 72203.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Please, do NOT remove the buoys, they protect
the shore line, people swimming around docks, and
the docks. You allow the heavy "SURF" type boats
and the drivers plow huge waves near other boats,
swimmers, and docks

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

The heavy big "SURF" type boats are a danger to
other boats, shoreline, swimmers and docks
NOT enough LAW enforcement on the water
How would you power boat lifts with current solar
technology, how to turn off individual docks in flood
conditions, how storage battery technology allows blow ups
Comments on the 2014 Master Plan:
and fires currently.

SUGGESTIONS - ALLOW "SURF" boats in only specific
AREAS
ENFORCE THE LAWS we already have FAIRLY

Your Name/Organization: Ludith S. Geraghty

Address: 5914 W. 51st St Missoula 66202

E-mail: tj.kgeraghty@gmail.com Phone: 913 432 8558

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

1 2 3 4 5 6 7 8 9 10
Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
Water quality and # of boats on weekends - Near Campbell Point since 1981 -
water quality has gotten worse - esp. last 20 years - nearby development ~~cut~~ cutting trees to
shore - muddy run-off. After last 3 floods, 2 homes water front had raw sewage
need better enforcement of laws governing septic and cutting of vegetation.
The owner of property with raw, smelly sewage had a vegetation permit -
perhaps some of that vegetation would have kept his crap out of the water
What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

1) can't sit on dock during weekend - too many boats - difficult to
even walk on dock. Don't need more docks.
2) Filthy water - need to protect water quality - it's looking like the
lake is the Ozarks - even in non-flood years -

Comments on the 2014 Master Plan: Appreciate that there seems to be a plan to make
changes that are not harmful but enforcement needed.
I see steps to take where trees are cut down illegally
Let's enforce the no mowing, and cutting of large trees.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Have BEEN AT THIS LAKE LOCATION FOR 36 YEARS AND
THE WATER QUALITY IS POORER, RUNOFF GREATER BECAUSE OF
LACK OF CONTROL, AND MORE POLLUTION NOT MENTIONED.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

TOO MANY DOGS ALLOWED, TOO MUCH CLEANING ALLOWED
AND NOT CONTROLLED WELL TO DO SO.
DON'T BELIEVE "NO SIGNIFICANT IMPACT" IS TRUE.

Comments on the 2014 Master Plan:

NO MENTION OF INCREASED NEED OF CAMP PERSONNEL
NEEDS, WITH + WHEN WILL WATER QUALITY BE MEASURED.
TOO MANY SPORTS TRUCKS AND LITTLE CONTROL OF RUNOFF
DON'T HAVE TO CLEAN MORE LAND.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
The existing plan has served the lake and the public well. This new plan does not take into account the hardships to the public's enjoyment of the lake, i.e. removing electric service from docks, limiting access to the lake, further restricting vegetation management.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?
Table Rock Lake is a major asset to the area as flood control and electric generation, but for tourism and retirement. The Corp has been a good steward, however this plan will negatively impact the community and the public.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? It is disheartening to read how far over-reaching the Corp and government is proposing to regulate Table Rock LAKE.

The current restrictions have regulated the Lake enough to maintain its cleanliness and beauty while still allowing public enjoyment.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Comments on the 2014 Master Plan: Current restrictions are working and no further regulations and restrictions should be implemented.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

My father William Gronniger (Shell Knob, MO) and mother moved to the lake back in 1973 and lived their until 1990. My son and I have been coming to the lake together dating back to 2000. We now share a lake home off of Bright Springs Road in Shell Knob, MO. The Corps has done a fine job with the regulations in place currently. I see no need to add further regulation and restrictions to those of us who

20170915_Gronniger_D-WA

call Table Rock Lake home. Enforcing the current regulations should meet the Corps overarching goals of providing a safe beautiful environment for years to come.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

daniel gronniger

20170915_Haberstroh_D&E

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

1. Existing docks being mandated to go Solar/Wind Powered by 2027, is not acceptable or feasible. This would be cost prohibitive to the dock/slip owners. New construction would be acceptable and incurred and designed for, at time of construction.
2. Outlawing equipment on a private dock; this is an over reach of the corps boundaries. Docks are to be enjoyed, without chairs is a dangerous concept. Also, telling private owners what they can and can't have in their private dock box is really going over the line.
3. Being able to drive down to your dock is very important to the safety of most individuals. Not everyone is close enough to walk, carrying all the equipment that is not allowed on the dock, to their docks. Age of most people, not only old, but the very young or the young ones that have to be carried. Not to mention the fleas, ticks, spider bites, etc. that can occur while walking in uncut grass, and over fallen logs that cannot be removed.
4. The modifications of personal docks are necessary to the environment of every home in every community. This is an over reach of the corps.

5. What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

6. The impact of not allowing dead trees from the last 4 floods to be cut down and hauled away, have caused damage to docks, boats and ugly shorelines. Not to mention the termites, fleas, ticks, mosquitoes, spiders, and deadly snakes. It is important to let home owners and or communities to maintain our shorelines clear to the water line; only behind (in front of) every home that is within 300' of the shoreline. Also, to our docks; this being for health and safety of humans.

7. TABLE ROCK LAKE SHORELINE MANAGEMENT PLAN ALTERNATIVES UNDER CONSIDERATION:

8. We choose Alternative 4(Neutral Change – Preferred) or Alternative 5 (Accelerated Private Development)

My opinion about a few items you are proposing.

- (1) Solar power, on all docks by 2027 (except "Marinas"). There is no reason for this as far as I have heard. "Safety": There is an inspection of every dock at renewal time. All docks must pass this every 5 years. There has not been a dock electrocution on Table Rock Lake. To impose this enormous cost to all ship owners is just plain wrong. Cost estimates of \$1000 to \$1500 and some up to \$2000 is outrageous. The expense does not end there, batteries will need to be replaced every 4 to 5 years if they are stolen before that and sold for junk price of \$15 ea. You are exempting the marinas from this, why. You are out to get the little guy.
- (2) No-Wake Buoys, the No Wake Buoys are very effective and respected by all boaters. I see evidence of this all of the time at the entrance to our cove. People playing in the water at these docks need the safest situation possible and the No Wake Buoys is the way. Signs on the docks will mean nothing. The Marinas get to keep theirs. Why is that? The same common sense reason applies to all.
- (3) Buffer on the Shore Line, The lake is for everyone and is "Public", so it makes no sense for you to allow weeds, brush and trees to greet them as they use the "Corp" shore line. Snakes and many other critters reside there. A reasonably maintained shore line is a benefit to property owners along the lake shore line. Something that was "Grandfathered" can not be taken away because you say so. What you finally arrive at should in no way affect property owners in a negative way.

Here is an idea for you to consider. Instead of scrapping it all and re-writing it; because all of it is not bad; just fix the areas that need fixing.

Subject: [EXTERNAL] New rules comments

I live on the King River portion of Table Rock Lake and I'm writing to voice my concern on the new rules planned for Table Rock Lake. First off, being able to lock someone out of their dock without due process is completely wrong. As well as not having the ability to appeal is also wrong and borders on being unconstitutional. I understand that rules must exist to keep everyone safe, but these are too extreme and unfair. Dictating how it's going to be without due process is the same as communism.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
The change in electricity supplied to private docks!
The need for golf cart permits to access the Lake!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Private cost of
changing electricity supply over to renewable is a MAJOR (significant)
impact to dock owners and no plans have been laid out on how docks
would store solar equipment such as batteries without consuming
room for walkways, etc.

Comments on the 2014 Master Plan: I commend staff for the efforts made to ensure
that public resources are protected for all users.

However, I have a problem w/ the need for limited golf cart access.
If enforced, I don't know how users, such as my 80's year parents
or close relatives would access my dock slips from my property!

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____
disapprove of the unfair cost to dock owners to convert to solar
disapprove of not being able to store your fishing poles and water toys on your dock
disapprove of unfair removal of no wake zone around each dock
disapprove of not being able to manage grass/weeds dead trees along shoreline
disapprove of limited use of lake

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____
leave the existing plan alone and enforce existing rules and regulations before you add more than your unable to enforce now:
such as wake zone buoy replacement.
Monitor the lake for safe boating and use. So many recreational boaters have no idea of rules and safety,
they tow tubers by marinas and float in the middle of lake and drive haphazard across lake. Enforce these rules

TO: Corps of Engineers Decision Makers

FROM: David Henson

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Henson_D-W

David Henson

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

- ① I do believe stronger enforcement of current shoreline rules, people are breaking them while others are complying.
- ③ Disagree with solar requirement, we cannot keep batteries in our boats due to theft. It will be a garden for theft with no means of catching.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? the three,

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

I THINK THAT IT IS UNFAIR TO PROHIBIT EXISTING DOCKS THE ABILITY TO MAKE CHANGES OR REVISIONS TO OUR COMMUNITY DOCK BECAUSE WE ARE LOCATED CLOSE TO A MARINA. WE SHOULD BE ABLE TO APPLY TO MAKE FUTURE CHANGES IN THE FUTURE AS OTHER OWNERS IN OTHER AREAS ARE ALLOWED.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

I FEEL THAT THE CHANGES BEING PROPOSED FOR SHORELINE MGMT ARE UNNECESSARY. LEAVE GUIDELINES AS THEY ARE! ALSO REQUIRING DOCKS TO CHANGE OVER TO ALTERNATIVE ENERGY IS ABSURD. IT IS ECONOMICALLY PROHIBITIVE TO DOCK OWNERS. AND CURRENT TECHNOLOGY MAKES

Comments on the 2014 Master Plan: IT DIFFICULT, IF NOT IMPOSSIBLE TO ACCOMPLISH. DON'T COUNT ON FUTURE ADVANCES IN TECHNOLOGY THAT MAY NOT OCCUR BUT PUT DOCK OWNER IN VIOLATION OF THE RULES.

We want your input during this update process. Please use this form to provide your comments and suggestions on items to update in the Table Rock Lake Shoreline Management Plan (SMP). Areas of discussion might include: current zoning, current policies on dock and vegetation permits, how could the lake and permits be better managed. Please be as specific as possible.

Having alternative energy for our docks is a good idea, but I think more research is needed since docks with solar energy are having some problems. And I am not in favor of wind as an alternative source since lots of docks do not get that much wind due to their location. Allowing additional access to the lake will most definitely have an adverse effect on the fishing and recreation for gillnetters on the lake. It also will not be a good thing for the wildlife we currently enjoy. We have many tourists that come here to enjoy the lake and I do not want to see this being abolished. Many of the tourists that run boats only on vacation need those things to keep safety as a priority. I also think there should be a length limit of 30 or 32 ft on boats because boats bigger than that can cause a huge wake that can swamp smaller boats and mess up the lake. We do not want our beautiful well

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

- 1) Only alternate power sources to floating facilities. The current electric lines have been in place for years without issues. Why change now?
- 2) No car parking. Senior citizens not permanently disabled but have knee, hip and stability issues are not covered in the SMP draft.
- 3) Outlawing storage of lake equipment (chairs, fishing equipment, skies, etc) used to enhance enjoyment of dock and lake usage should be allowed
- 4) Removal of No Wake buoys. Need to keep strong deterrent from rogue wakes made from larger boats and "wake" boats from damaging docks.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

With the current ACE fiscal restrictions limiting the number of ACE rangers available to enforce the current rules and regulations how can we consider any of the environmental assessment proposals other than No Growth until TRL ACE gets an increase in budget to provide proper enforcement. However, the pragmatic approach is the No Action (Alternative 3) plan, especially since the current plan is working.

**Objections to the Shoreline Management Plan
Attachment to Master Plan Comment Form**

Table Rock Lake Mission – among the five missions authorized for Table Rock Lake is “... recreational development...”. I fail to see how these additional restrictions can be viewed as fulfilling that mission.

No Wake Buoys – the proposed ban on private No Wake markers is completely without merit. No wake markers serve several important functions, including providing a “safe zone” for persons swimming near docks. Furthermore, it provides notice to inexperienced boat operators (especially rental boat operators) to slow down near boat docks.

Requirement for Alternative Electric Power for Docks – the proposal to require alternative (presumably solar) power for docks should be abandoned. For the small amount of power used by most docks, the pay-back period for recovering the initial cost of installation is never. The Corp already requires electrical inspections as a condition of permit renewal. I believe a requirement for more frequent electrical inspections would be a better option rather than forcing all dock owners to spend significant sums of money installing solar power. In addition to the cost, the weight of solar panels added to the roof of existing docks will increase the likelihood of roof failures, especially in the event of a snow or ice storm. Finally, since the docks were not designed for battery storage, the location and weight of those batteries will also present problems.

Also related to the issue of docks is the proposed requirement that requests for modification would only be considered once during the 5-year permit period. A more common-sense approach would be to allow for one free request during a 5-year permit period and charge a user fee for review of additional requests.

On the issue of golf cart or turf tire vehicle usage, I do not believe the current rules need to be changed. The current policies provide adequate protection for Corp property without unnecessarily limiting access to boat docks.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I believe the vegative permits should be easier to get. As long as the shore line is beautified, some brush clearing should be allowed. The vast majority of shore line is covered with brambles and brush now. If you want to clear the brush in front of your property, it should be allowed. Thank you.

20170915_Holland_S-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Sam Holland

Parents live there: Homer and Jo Blair

Thank you for the opportunity to provide comment on the proposed plan. First let me state, I so appreciate the work of the Corp and dedicated staff on protecting the lake, shoreline and homes. I have never felt the need to comment on prior proposal as I believe you know what you are doing. I'm simply a homeowner and not a researcher or engineer.

With that being said, I oppose part of the plan that mandates the removal of No-Wake buoys for private docks by 2020. I believe it was about 10 years ago when my parents first received the permit to place a No-Wake Buoy by our dock. Prior to that, it quite frankly it wasn't safe to swim beyond the dock due to the fast-moving wave runners coming out of Big M and the onset of much faster and bigger boats coming to our end of the lake creating huge wakes and it being an ideal location for boats to swing in and turn around. It is also an ideal fishing location and while the fishermen only idle speed while they are fishing.... however, if the fish aren't biting, they are the first one to shove their boats into high gear regardless of the size of the boat to move onto the next location. Again, creating large wakes, and not always with the respect of the buoy and location.

The buoys mitigate the traffic and dangerous situations off our boat dock.

Because of the location of my parents' home, which we now own, it is an ideal location for boats to speed up, wave runners to play and fishermen to zoom in and out of the small inlet and big boat with BIG Wakes to bring skiers. We have maintained and replaced the buoy though the rise of the water and flooding, is critical for our safety and to keep our dock from succumbing to wave damage. The buoy provides confidence that boater respect...*well for the most part.*

I recommend that current Private No Wake Buoys be grandfathered in to the plan or for the Corp to simply provide oversight if there is a problem. There is no justification in the plan to support the change of practice and policy. A sign on the boat dock as presented wouldn't be seen by boaters, skiers, wave runners or fisherman until they were upon the boat dock. **Basically, what good is that going to do?** I would further recommend if the problem is that that owners are not taking care of them, then more closely monitor them as you do everything else on the lake like the trees. I would even go so far as to propose a fine or removal after warning.... if they are not being care for by the owner.

Please reconsider your proposal on the Private No Wake Buoys. I actually think there are probably bigger fish to fry...so to speak in this proposal than the simple line about the removal of the buoys.

If you are leaning toward moving forward with keeping this provision, please contact me directly so that we can discuss next steps.

Again, thank you for allowing input. I wish I had the opportunity to be at one of the hearing because of distance and other commitments I cannot. It would be great if there was live streaming or the availabiltiy to do a meet me meeting through an app or other electronic connection.

Thank you!
Mousethy

20170915_Hyde_M&P

Comments:

I have owned a slip since 2014 on table rock in a 6 slip community dock. I look forward to retiring down at the lake within the next 10 years. When I read of the recent changes to the Shore line Management Plan, a few of the items in the plan I totally disagree with and I understand you want to hear our comments so here is what my comments/concerns are regarding these items:

1. **Solar power by 2027.** The impact of this would be big as many of the owners of these docks are retired and don't have the income that they once did to have to pay this money out to do this. The other thing is it is an ongoing expense as I understand the batteries would have to be replaced after so long. The Corps has "good" regulations as it pertains to having these docks inspected by a certified electrician every 5 years at permit time. I understand the concern regarding the safety of everyone with electricity and water, but make everyone convert to Solar is going to the extreme. There are others things that could be done that would be less expensive and would provide a measure of safety, example, change electrical inspection to every 3 years. I'm sure there are other things as well but solar is NOT the answer.
2. **Removing No Wake Buoys by 2020.** I don't understand this at ALL. This is a huge safety issue. We are located in little aunt's creek with a buoy and on Saturdays, it is crazy with the wake board boats and cruisers. Not all boaters adhere to the buoys that are in place so if we remove them they will be much closer to the docks creating a very **UNSAFE** area for kids to be swimming, kayaking, paddle boarding, etc. And the condition of the docks all over the lake will go down due to the increase in wake in close proximity to the dock.
3. **Cedar trees can be removed up to 3".** If I read this part correctly, this was a change from 2" to 3" for those who have a shoreline permit. I feel that should be increase to at least 5" as cedar trees are very plentiful and it would not hurt to remove some of the bigger ones as well.

Concerned property owner,

Mark and Pam Hyde

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

No one wants the lake to get like the Lake of the Ozarks, but we don't want it so restrictive that we cannot enjoy using it. What is the issue with storing fishing items and water toys on the dock? Storing gasoline and oil I understand but not the other. Why remove the buoys? They help protect the docks and boats from the waves of fast traveling boats and other water craft.

20170915_Ikerd_B-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps.
Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Beverly Ikerd

REMOVAL OF NO WAKE BOYS

CONVERT TO SOLAR POWER

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? I THINK THAT

REQUIRING NEW DOCKS TO USE SOLAR POWER IS
AN OK PROJECT I THINK RETROFITTING A CURRENT
ELECTRICALLY COMPLIANT DOCK IS A UNNECESSARY OPTION

Comments on the 2014 Master Plan: I THINK THE NO WAKE BOYS ARE
A SAFETY FACTOR

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

My family and I have enjoyed Table Rock Lake for 25 years now it is a wonderful place for family recreation and fun.

20170915_Ivy_A-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Arlie Ivy

This is a shame you are still controlling this beautiful Lake and making it a hardship on all the boat owners and Marinas!!!! You have no idea what this will do to the tourism.

20170915_Ivy_A-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Arlie Ivy

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

My family has enjoyed Table Rock Lake and all that it offers for the last 30 years. We now own a vacation house at Shell Knob and have invested even more in the lake and area. The Corp has clearly done an excellent job in managing the lake and shoreline. We respect that and find it intolerable when others do not demonstrate the same respect for the lake and area. With this we respectfully request

20170915_Jacobson_S-WA

that the Corp not change the existing shoreline management plan that we believe has been working well to preserve the lake and shoreline.

Thank you, again, for your work in preserving our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Steven Jacobson

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Generator Vs Solar - In 4 Stall Dock - Electric usage
Probably 2 hrs. per year at most. Generator wired properly cost
at most \$800 - Solar latest est. \$8500. Why go to that expense
for 20 a yr. for electric?
Private money not govt.!!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Comments on the 2014 Master Plan:

Why do away with No Wake Zones - Makes no
sense!! Some inconsiderate boaters coming into coves would beach
smaller docks. Doesn't State want responsibility? There other
ways to leave No Wake signs alone.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Our property is situated on a slight slope. If your Revised Shoreline Mgt plan is put in place our view of beautiful Table Rock Lake will be reduced to walking out to waterfowl events, school lunch and dress. We are very disappointed. We also are 1/3 owners of a three acre boat dock. It is located two doors down from us. The question arises as how are we to get to our boat dock without going onto other people's property.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? We understand your views of wanting to keep Table Rock Lake as natural as possible. We do as well. We would never do anything to disturb its natural beauty or have an adverse effect on the wildlife in the area. We do believe it is possible to work with the natural trees and grasses and climate only those that are needed and will cause problems in future years. If we actually work together instead of against each other everyone will benefit and will have a beautiful natural habitat and view.

Comments on the 2014 Master Plan: We purchased our property 25 years ago always with the intention of when we can retire we would build our dream home looking out at Table Rock Lake. We are fortunate enough to now be in a position where we are able to move to the Branson Lakes area and still work but realize our dream. If the plan that is presented is finalized, all that we have saved for and dreamt about will not come to be. Please, as you ask for property owners to be respectful of the lake and its wildlife also show the property owners that same respect and understanding.

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

1	2	3	4	5	6	7	8	9	10
Strongly									Strongly
Disapprove									Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

I strongly disapprove of the plan. Factors:

1. No buoys for speed by community docks.
2. No burning.
3. Solar electricity for docks.
4. No golf carts near docks.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

I bought a place on the lake when I retired three years ago as a second home. I think the plan will decrease property values and become a deterrent

to a family friendly environment. As I read it, the Corp doesn't have much interest in the homeowners on the lake. I realize protecting the lake is #1, but I think this is way out of line. If the rules aren't bad enough, the penalties are draconian. Two years on a second offense? Shutting down a slip that costs tens of thousands of dollars without an appeal process or a judicial hearing?

Comments on the 2014 Master Plan: No buoys for speed by community docks: Our dock is on a very narrow prtion of the river and we take a severe beating from passing boats even with a buoy. Our buoy is out only 50 feet from the dock and to remove it would cause more deterioration to the shoreline as well as damage to the dock and lifts. No burning: During the recent floods, our dock and shore was impassable with debris. Why slow down removal with unnecessary paperwork requirements. Solar electricity: The cost to the slip owners to install solar for lifts and lights is not a reasonable thing to unilaterally force on owners. And a complete dock lighting setup for night boating requires the whole dock to be lit for just one user, just for safety. Golf carts: They're virtually harmless. Do you know how many people (young and old, and not necessarily handicapped) go to the docks with swim and fishing gear, not to mention 5-gallon gas cans, tools, etc., to work on boats?

Comments may be submitted via mail, email, fax or the project website with attention to: Table Rock Lake SMP/MP/EA Project Manager, Programs and Projects Management Division, USACE, Little Rock District, P.O. Box 867, Little Rock, AR 72203.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

These rules are a huge overstepping of the power of the Corps of Engineers. For instance, many of the neighborhoods are modest homes owned by people of modest means who enjoy the lake on weekends and holidays as well as those who live there the year round. Many are looking forward to living there after retirement. The idea of requiring these modest neighborhoods to change to solar for docks is

20170915_Kelley_C-WA

simply ridiculous. It is horribly expensive, very heavy and just unaffordable for many slip owners. Also the requirement to have handicapped permits for golf carts is "really? Are you kidding me?" Go out on your boat for the day with no way to take your cooler for lunch to your boat. Hummm. Some of these people are not handicapped, but are older people. I am not handicapped but am 80 years old. It is hard for me to get down there and back. I am shocked at the draconian punishments for breaking these idiotic rules which are designed to impinge on the property values and rights of property owners on Tablerock.

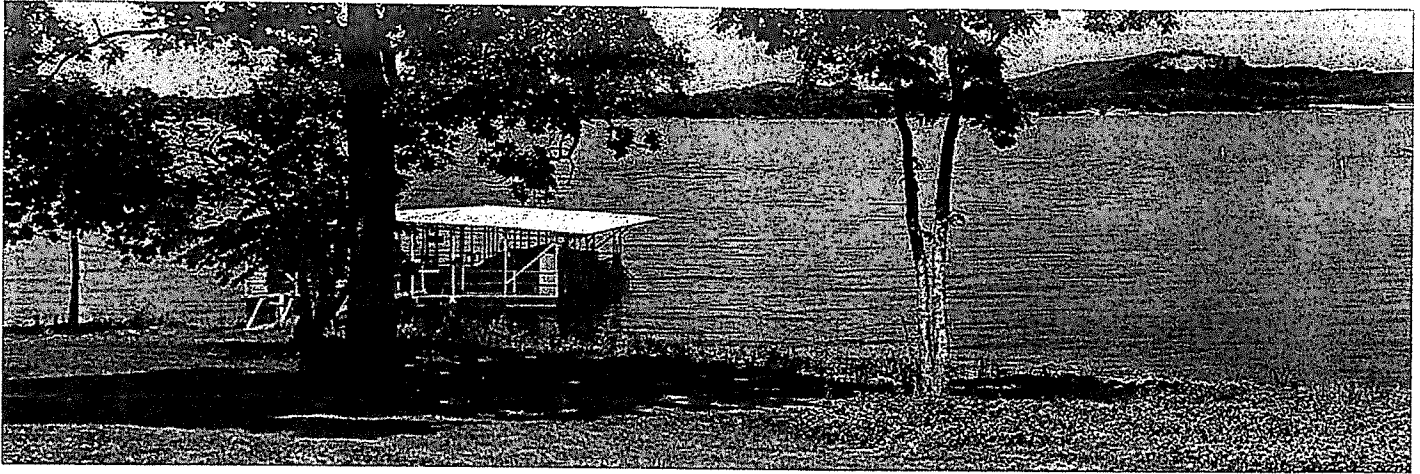

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Connie Kelley

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? IT SEEMS THE CORP OF ENGINEERS IS NOT TAKING INTO CONSIDERATION THAT THE LAKE IS ALSO FOR RECREATION. THE DOCKS ARE PROTECTED BY NO WAKE BOOYS. THE REMOVAL OF THESE BOOYS WILL ALLOW BOATS TO COME CLOSER TO THE DOCKS CAUSING THE DOCKS TO FLEX WITH THE WAVES WHICH WILL IN TIME BREAK THE WELDS. IT ALSO ENDANGERS SWIMMERS AT THE DOCK.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? THE REQUIREMENT FOR ALL DOCKS TO GO TO SOLAR POWER CAUSES ODDER HARDSHIPS ON DOCK AND SLIP OWNERS. THE SOLAR POWER IS NOT RELIABLE WHEN DOCKS HAVE A LOT OF USE IN ADDITION THE COST IS PROHIBITIVE. THE EQUIPMENT IN MOST CASES ALSO WOULD REQUIRE DOCK ADDITIONS TO ALLOW MOUNTING OF THE BATTERIES AND CONTROL EQUIPMENT. TABLE ROCK HAS MOSTLY SENIOR CITIZENS WITH LITTLE OR NO INCOME.

Comments on the 2014 Master Plan:

ALLOWING NEW SMALL DOCKS (1-6 SLIP) WILL CAUSE THE SHORE LINE TO LOOK LIKE LAKE OF THE OZARKS WHERE NOT MUCH OF THE SHORE LINE WILL PROVIDE AREAS FOR FISHERMAN TO FISH. SMALL DOCKS HAVE A TENDENCY NOT TO BE MAINTAINED PROPERLY

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

My problem: have read, re-read & not sure what I read. Too much "lawyer" wording. I guess I thought the lake was for public, but it seems not to be = so I guess from why place a dock where for over 20 yrs the road ended at lake & residents of community used it to put boats in/out. Now can't. Who had the right to say not a designated area??? Should be grandfathered in. Only my view. Also, I hope better written so those of us who do not totally "get it" can!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

The info I picked up at Shell Knob on 9/1/17 does not mention any of this. #6 Alternative makes the best sense!
Shoreline should be able to be cleaned @ anytime, Burn the refuse & any time (yes let Fire Dept know) but let those on the lake keep it clean. Govt. Shouldn't say when one can clean or burn. Make it pretty.
Comments on the 2014 Master Plan: Delete #1, 2, 3, 4 Alternatives. Terrible planning from my point of view. #6 the best. #5, well, maybe.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

THE REMOVAL OF NO WAKE BUOYS POSES A HAZARDOUS SITUATION FOR SWIMMERS AND WILL INCREASE THE DAMAGE TO DOCKS FROM THE STRONG WAVES AND WAKES CREATED BY SURF & WAKE BOARDING. BOATS ALREADY CHEAT ON THE N/W BUOYS, SO THERE IS NO REASON TO BELIEVE THEY WILL STAY AWAY FROM THE DOCKS EVEN WITH A DOCK SIGN!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

MANY OF US LAKE RESIDENTS ARE IN OUR 60'S 70'S & 80'S. WITH ROCKY SLOPES EXCEEDING 20% IT IS VIRTUALLY IMPOSSIBLE TO SAFELY MAKE ONE'S WAY TO AND FROM OUR DOCKS WITHOUT SOME SORT OF PATHWAY IMPROVEMENT. WHY CAN'T STEPPING STONES BE ALLOWED TO THE 915 ELEVATION? WHAT HARM IS THERE IN ALLOWING THIS?

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

I am opposed to over regulation / NO Change needs to be made.
I object to the requirement to convert all docks to Solar
panels. It will be a financial burden on dock/slip owners and
create additional maintenance for battery replacement and panel upkeep.
I object to the removal of private No Wake Buys - these are needed
to remind boaters to slow down - otherwise they run by at full speed!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

I believe these
proposed changes will negatively effect real estate values
and negatively impact current dock and slip owners. Already
there is too much regulation. I am afraid to do anything
because I will violate some regulation. It is sad
when you spend \$1,000's of dollars on a slip and have
no freedom to use without fear of breaking a rule.

Comments on the 2014 Master Plan: I am opposed to the new kind Classification
Access to docks are already difficult enough in some areas.
Access to the lake and your dock should not be treacherous
Common Sense modification would benefit dock/slip owners.
Instead of restrictions prohibiting improvements to easily
access the lake especially for the elderly and impaired.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? We strongly Disagree on the need to go solar on all the docks by 2027. This is an extreme measure that we feel is unwarranted. There have been no deaths from electrocution on Table Rock Lake in the past and we feel that the current rule that all docks must be protected by ground fault equipment is working well. The current inspections by the corps seem to be catching any faulty equipment involved. Not only would it be costly to all the slip owners, but also pose a safety concern that the batteries could not hold enough charge to get through a cloudy spell that would not keep the batteries charged. The lights on the docks would then be dark and pose a safety hazard for boaters after dark as well as exposing the docks to more theft.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? We have no comment on this assessment. Our other concern with the 2017 revised shoreline Mgt. plan is this. Asking us to remove the "No WAKE BUOYS" and replace them with a sign on the docks would INCREASE the wakes to the docks. By the time boaters would see the signs they would be too close to the docks and be increasing the wake. The safety of people swimming around the docks is another issue that would arise from the removal of the buoys!!

Comments on the 2014 Master Plan: This plan is restrictive enough!!

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Lanning_J-W

**Table Rock Lake Shoreline Management Plan
Revision, Environmental Assessment,
Master Plan Comment Form**

Please use this form to respond to provide your comments on the draft revised Table Rock Lake Shoreline Management Plan and the draft Environmental Assessment. The draft revised Shoreline Management Plan and Environmental Assessment may be found on the web at <https://go.usa.gov/xN92n>. Please also include any comments you may have regarding the 2014 Table Rock Lake Master Plan. The 2014 Table Rock Lake Master Plan may be found on the web at <https://go.usa.gov/xN92n>. Feel free to take an extra form and sent it back later to the address listed below. **Comments must be submitted by August 30, 2017.**

Your Name/Organization: Kimber J. Lantry

Address: 23931 Green Shores Drive
Shell Knob, MO 65747

E-mail: kimberlantry@hotmail.com **Phone:** (417) 858-0713

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

1	2	3	4	5	6	7	8	9	10
Strongly									Strongly
Disapprove									Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Your overall regulatory plan is turning Table Rock Lake into something that is only accessible by the wealthy. Don't force us to go solar on docks in 10 years. That will cost \$15,000 per dock. I own two slips on a four slip dock—that is a heavy cost, that will only run up the price of each slip. Don't regulate the further restrict the number of docks/boats. Only three weekends a year are truly busy on most of the lake—Memorial Day, 4th of July and Labor Day. Those of us who live on the lake know to stay off it on those weekends. Most of the remainder of the time, it is a very quiet, pleasant lake with the occasional fishing boat. If you must restrict, but some type of system that limits the amount of public put ins of boats on those three weekends, but don't engage in the draconian regulations proposed on this plan.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Don't eliminate the "no wake buoys." Those are important to slow boats down and prevent soil erosion, not to mention the wear and tear on our boat slips from the excessive wakes.

You are all about onerous regulation—why would you take away a really helpful regulation. WHAT ARE YOU THINKING?

I am strongly opposed to your regulation of not allowing fishing equipment and water activities equipment to be stored on docks. We have a narrow plastic shed mounted permanently on our dock that works well for storing fishing rods.

Comments on the 2014 Master Plan:

We do you get off on not allowing us to park golf carts and ATVs by the docks? We only do that when we are using our boats—not permanently. We already have a steep 20-30 foot hike down to the dock from where we park the ATV—using our boats will become completely impracticable if we have to park off core property. We already use only your approved rocks on our pathway to the dock, never cut any vegetation as per your requirements. Now you are trying to find ways to keep us from using our own docks. You are getting very close to a taking without compensation, forbidding by the Bill of Rights of the Constitution.

Disapprove									Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

Most important is that we live here and want the best care, stewardship, and enjoyment of the Lake for all.

This Plan seems adversarial to the local community. Where we seek a balance of use, the SMP proposes measures that reduces those opportunities.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

These should have been prepared, in an unbiased way, for all Alternatives. Based on the evaluation given, I believe that none of the Alternatives would have significant impact. Limiting the review to a single, COE-chosen Alternative reflects an attitude that does not promote cooperation

Comments on the 2014 Master Plan: Comments are attached. Thank you for the opportunity to respond.

Table Rock Lake Shoreline Management Plan
Revision, Environmental Assessment,
Master Plan Comment Form
Addendum: Comments on the 2014 Master Plan

We offer the following for your consideration:

Re-educate the COE on the local community. Most are here because we want to be. We want to enjoy it. We will defend it against environmental mistreatment and other abuses. We don't believe that the Lake is any more "ours" than anyone that has the same love for it. Some of us have invested everything we have to be here.

Adopt and enforce boating safety standards: Every boater that wants to use TRL must pass a test that includes what the little red and green lights mean, no-wake requirements, liability for financial loss or injury caused by your boat's wake, etc. (Then we can get rid of the no-wake bouy's as proposed in the SMP.)

Adopt and enforce electrical safety standards: The Table Rock COE requires only 1990 / 1993 NEC compliance. There have been 8 revisions since then including 2017 in which Article 555 now (again) includes community and private docks.

Quit trying to defend "cedar" trees. There should be a bounty on them not protection. They are technically, if not statutorily, invasive. The University of Missouri documents that they take resources from other trees and reduce habitat and should be mowed down. This issue is very harmful to the COE credibility.

Allow thoughtful management of trees and vegetation. If there is a landowner that adjoins the Corp property that wishes to thin trees or replace them with another indigenous specie, let them work with an approved arborist and present a plan. The COE wouldn't even need to visit – just work from photos and drawings. Note: Some of the nicest looking places along the Lake are where the adjoining property has a mow-to-the-water permit. Some of the seediest / disconcerting looking areas are those where the trees and vegetation have grown to obscure the view.

Stop micro-designing docks and local community access. If it is not the objective to impose difficult and costly regulations on slip owners so as to drive them away, there are a number of requirements that don't seem to add value to SMP but do require a lot of valuable COE to manage / enforce.

Slip / dock dimensions: The overall requirements for spacing, extension across the cove, etc, address safety and navigation issues. The width of the dock, number of slips, etc, don't add anything but work to oversee and enforce.

Dock Storage: You described an example of a dock owner added living quarters. I would address this directly rather than falling back to a 1939 (?) regulation that allows only the oar. Most docks are difficult to get to. Having to take fishing gear or boating toys back and forth each time would be more difficult. Unless that is the objective?

Dock Revisions limited to 5 year minimum: This is to limit COE workload or slip / dock ownership? If, for example, one slip owner wanted to try alternative energy. Then, if the association allowed it and the COE approved it, no one else could implement it for 5 years?

No Wake Buoys: As I understand your concern, there are a number of buoys that were placed in the water and either are not looked after properly or have been abandoned. This would seem to be an easy fix if that is really the issue. Require registration of the buoys and anchoring with a system that will keep them in place at the normal range of lake level. Once the TRL Boating Safety license has been in place several years and boaters demonstrate proficiency at recognizing the safe distance to keep from docks, swimming areas, and other boats, the buoys can be phased out.

Alternative Energy: I'm not sure that this isn't a red-herring. I don't even agree that "new" docks should be required to use alternative energy as the application is still developing. But requiring a change-out of all electrical service in the next 10 years would be quite costly and without offsetting benefit.

Shoreline Access: A small dock has a, say, 35' x 35' footprint. Most bigger than 2-slip can be 65' wide x the number of slips. A small opening through the Corp ground, say 20' in width, that runs from the dock's walkway to access areas is neither a distraction from the natural beauty or a claim of ownership. The Corp needs to grant reasonable access without burdening restrictions. If the dock owners wish to improve the access for safety reasons, this should be encouraged rather than blocked.

Miscellaneous: A number of requirements with unclear purpose permeate this SMP proposal as well as previous Plans. The time and effort to draw a map indicating which house can host dock parking is a prime example. Of

what consequence is it that the house 15' closest has to be the house? The SMP is a target-rich opportunity to reduce bureaucracy as is our President's mandate and the voter's desire.

Sincerely,

Lynn and Diane Letner

15 September 2017

Dr. Randy Hathaway
Deputy District Engineer – Little Rock District
US Army Corp of Engineers

Randy,

Thank you for your respectful discussion Wednesday evening, August 1st, at Reeds Spring HS as well as your invitation to contact you directly through email. Hopefully with this dialog, we can provide feedback and comments more useful to the process.

We've given quite a bit of time to try to understand the COE's mandate and perspectives on the SMP. You may recall that you joined a conversation that included several neighbors with homes "on" Table Rock and Jacqueline Bouchard.

While you suggested that with better understanding and dialog we could improve the design and operation of SMP, prior to you joining Jacqueline made it known that the COE is "coming from the complete 180 degree perspective [than ours]". In her understanding, the answer to all questions, input, suggestions, and challenges is "the Lake is 'our' [COE's] Lake, 'you' [community] only have privileges that we grant and, as such, we do not have to defend our decisions or consider your view".

We can debate ownership but mostly we agree about our privileges. It shouldn't mean, though, that there can't be mutual respect and cooperation to a higher result. Based on the dialog with Jacqueline, it seems clear that the COE's objective is control with minimal involvement. Of course, we would prefer to help to arrive at a better solution than either party can by themselves.

I offer the following for your consideration:

Re-educate the COE on the local community. Most are here because we want to be. We want to enjoy it. We will defend it against environmental mistreatment and other abuses. We don't believe that the Lake is any more "ours" than anyone that has the same love for it. Some of us have invested everything we have to be here.

Adopt and enforce boating safety standards: Every boater that wants to use TRL must pass a test that includes what the little red and green lights mean, no-wake

requirements, liability for financial loss or injury caused by your boat's wake, etc. (Then we can get rid of the no-wake bouy's as proposed in the SMP.)

Adopt and enforce electrical safety standards: The Table Rock COE requires only 1990 / 1993 NEC compliance. There have been 8 revisions since then including 2017 in which Article 555 now (again) includes community and private docks.

Quit trying to defend "cedar" trees. There should be a bounty on them not protection. They are technically, if not statutorily, invasive. The University of Missouri documents that they take resources from other trees and reduce habitat and should be mowed down. This issue is very harmful to the COE credibility.

Allow thoughtful management of trees and vegetation. If there is a landowner that adjoins the Corp property that wishes to thin trees or replace them with another indigenous specie, let them work with an approved arborist and present a plan. The COE wouldn't even need to visit - just work from photos and drawings. Note: Some of the nicest looking places along the Lake are where the adjoining property has a mow-to-the-water permit. Some of the seediest / disconcerting looking areas are those where the trees and vegetation have grown to obscure the view.

Stop micro-designing docks and local community access. If it is not the objective to impose difficult and costly regulations on slip owners so as to drive them away, there are a number of requirements that don't seem to add value to SMP but do require a lot of valuable COE to manage / enforce.

The SMP is a target-rich opportunity to reduce bureaucracy as is our President's mandate and the voter's desire.

Again, thank you for the opportunity to input. I will add the main points to a Comment Form as well. If the opportunity exists to further this discussion, I encourage you to contact me.

Sincerely,

Lynn Letner

This concept was discussed / debated both before and during your participation in the conversation. It was also an extension of a conversation that one of our neighbors had with Jacqueline in Shell Knob the night before. I do not know anyone that is not aware of the right of public access to Corp property. Jacquelyn's counter to our confirmed support of this public right was to suggest that we were in the minority as confrontations / threats with guns by adjacent landowners were common. At the Shell Knob meeting Jacquelyn challenged our neighbor's support for "Public" by asking if she'd be OK with "someone from New York parking their boat in what you consider to be your slip".

I have contacted Sheriff Rader (Stone County) to see how many instances that they've had of someone threatening or assaulting someone using Public lands but I think that is an example that won't hold up to the facts. I don't doubt that there may be instances of locals involved in something illicit (e.g. meth lab) that may have chased away a "threat" as there are roads that the Sheriff's Department have advised emergency response personnel (fire, ambulance) not to enter without LEO accompaniment.

As to the "park in your slip" idiom test, I would think most people would react the same as if "someone from New York" set up house in the back of their pickup while parked at the Old Mill Campground. While it is true that they are there only by permit and it's on public property, the truck itself wouldn't customarily be considered a public use opportunity.

- i) Ms. Bourchard advised us at the meeting that owning a slip didn't mean that the owner could have access to it. "Even the ADA doesn't require access in every circumstance" she said. I believe, though, that the COE should not have any objection if an owner that is capable of getting in or out of a boat wanted to pay for his/her own safe access.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? It appears that the Environmentally Sensitive areas were determined based on Current Land Use in 2014. Our location was under construction at that time we are now unable to obtain a brush or mow permit that would allow us to give our patrons a peek a boo view of the Lake. But it appears that other commercial properties were given a minimum Rating of "Low Density". This is extremely unfair. They are allowed the permits we are seeking.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

1. Post, Living in a Retirement Area will affect people living on fire in road
2. Post to maintain, will not adjustly severe load, nothing about Retirees, Power to left Docks when sun is not available
3. weight add to dock, this plus snow load, will dock be handle extra wt.
4. Insurance Rate increase, why are commercial exempt
5. cannot store generator, on dock

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

on the Buoys, they provide safety and less strain on docks.
I have lived on this lake for 25 yrs and Buoys have never caused any problems that I ever heard about.

As far as access there are lots of Elderly living on this lake, will cause inc. insurance.

Comments on the 2014 Master Plan: I think making sure all docks have a ground fault on the dock should be adequate.
Not sure if there is some kind of sensor that could be installed that detects normal leakage + would activate the ground fault.
There has to be a better solution to this

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? IT SEEMS TO BE A PLAN FOR COMMERCIAL DEVELOPMENT AT THE COST OF PRIVATE LAND OWNERS AND PRIVATE INDIVIDUALS. IT SEEMS TO YOU ARE TRYING TO FORCE SMALL DOCKS AND COMMUNITY DOCK OFF THE LAKE IN FAVOR OF LARGE COMMERCIAL DOCKS. IT IS ALL ABOUT MAKING MONEY AND GOVERNMENTAL CONTROL. IT NEVER WORKS. MOST OF US THAT LIVE ON THE LAKE TAKE CARE OF IT. IT'S THE VISITORS THAT TRASH IT.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? NO ELECTRIC LINES TO DOCKS. SOLAR WILL NOT WORK FOR COMMUNITY DOCKS. COST AND WEIGHT FOR BATTERIES IS TOO GREAT. POOR CONSIDERATION FOR ELDERLY AND HANDICAPPED GETTING TO AND FROM DOCKS. NO WAKE BOYS, SLOW DOWN ENFORCED AND REMOVED. SOME OF MOST CAME HERE TO RETIRE AND YOU MAKE IT SO HARD TO ENJOY THE LAKE.

(*1 DOLLAR PER NIGHT)

Comments on the 2014 Master Plan: WE CAME CAMPING AT OLD #6 CAMP GROUNDS IN THE EARLY SIXTIES (62) WHEN THIS LAKE WAS CLEAN AND CLEAR DOWN TO 30 FEET. NOW LOOK AT IT. IT'S ALMOST AS BAD AS LAKE OF THE CHICKS. YOUR PLAN DOESN'T SEEM TO MAKE THE PROBLEM BETTER BUT ONLY WORSE BY MORE COMMERCIAL DEVELOPMENT. THE PROBLEM IS NOT MAKING PATTY PATHS TO A DOCK BUT PUMPING CRAP INTO THE LAKE. ALTERNATIVE #4 PREFERRED LOOKS BEST.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Social Injustice - These changes will negatively impact the use of the lake, which in turn has a negative impact to those who live in the community and make a living there. This area of SW Missouri is already impoverished. These changes will have a very negative impact on home and real estate values. Many people here are on fixed income and retired. Things that negatively impact the lake use are:

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Eliminating electricity to the boat docks, eliminating golf cart use and changing / restricting vegetation permits. Eliminating electricity (existing) by removing poles cables etc will have a negative impact on riparian ecosystems as cause soil erosion. There has been no electrification on Table Rock Lake whereas removing boat slips/docks will cause drownings. Solar panels need maintenance and have overwhelmingly unsafe batteries this doesn't improve the lakes environment. There is no need to ban golf cart use as their

Comments on the 2014 Master Plan: use doesn't impact shoreline. If there is a ban people will cut through others property causing social unrest and again social injustice to those who don't have ready access or live immediately on the waters edge. The elderly are being discriminated against! Why is electric generated using the water from the lake but can't be used on boat docks on the lake? This makes no sense and is counter to being "green". Make no changes to

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

How can the core voice concern over preservation of the shoreline when they allow boats to fill ballast with hundreds of gallons of water to create massive waves that wreck the shore and erode the shoreline...makes absolutely no sense to me and is a terrible reflection on the core's judgement. It's time to face the issue on these surfer boats and stop the damage to the shoreline.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

Comments on the 2014 Master Plan: I strongly disapprove the plan to eliminate buoys from private docks that already have them in place.

This represents a major risk for anyone who swims off their swim decks, and would surely lead to loss of life due to boats hitting swimmers.

Additionally, our docks are already falling apart with broken welds caused from surfer boats filled with water ballasts. I can't even imagine why a proposal such as this would be raised...it defies common sense and is an insult to the Core to even consider this. The boats already hug the existing buoys, and without the buoys, my kid's and grandchildren's lives would be at risk. I will not conform to this rule and if passed...my buoys will stay.

TO: Corps of Engineers Decision Makers

FROM: Steven Lumpp

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Lumpp_S-W

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

[illegible]

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

The requirement of renewable energy in the place of shore power will cause a unnecessary financial burden on every dock/slip that must be converted. The draft "Finding of No Significant Impact" is not accurate when addressing the costs of solar systems and removal of existing shore power. There may not be an impact or financial burden on the USACOE, but there will be on owners of private/community docks and slips. I do support most of the revised Shoreline Management Plan, but find the renewable energy clause to be unreasonable and places an undo financial burden on dock/slip owners. Not only is solar expensive, it is unreliable. The difference in dock solar systems and a home solar systems; a home is still tied into the grid in order to rely on power at night and on days little or no solar power generation. Unless large battery storage capacity is installed, a dock runs the risk of losing lights at night, thereby causing a navigation hazard for watercraft and increasing the possibility of theft or vandalism to the docks or water craft stored there.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?_____

There is a significant impact on owners of private/community docks, particularly financially. Also, a dock runs the risk of losing lights at night, thereby causing a navigation hazards for watercraft and increasing the possibility of theft or vandalism to the docks or watercraft stored on docks.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

One of the new proposed rule changes on Table Rock Lake is the removal of "No Wake Buoys". I realize State law states no wake zones within 100 feet from any boat docks. However, the U.S Army Corp of Engineers is proposing removing the buoys by the end of 2020. A person's perception of 100 feet is by no means an exact science. The safety of citizens and damage to property is at risk if the buoys are forced to be removed. No wake/idle speed buoys are good reminders to boaters; particularly wake boats and large watercraft, to remain away from docks. Idle speeds are much safer for boats to navigate around structures. The damage caused by wakes to docks is substantial. Do your homework and contact dock and lift builders to verify. More importantly, the risk for injury to swimmers is one the Corp should consider. Buoys offer a friendly reminder to occasional boaters to stay a safe distance from docks and maintain safe speeds.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Safety of swimmers and docks

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I have reviewed the Corps proposed shoreline management plan and object to all proposed changes to the existing regulations. Having worked for 37 years with 5 COE Districts and Waterways in Vicksburg this is the greatest degree of regulatory over-reach by the Corps that I have ever observed.

20170915_Malone_P-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Patrick Malone

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

1. No-Wake buoys for private docks. Concerned for families swimming off of dock and damage to docks without buoys due to high speed boats near dock
2. Only alternative power sources (solar) will be allowed. Concerned of the cost and the efficiency of solar. We have a dock of 20 slips and do not believe that solar power will be sufficient power source to take care of boats that are charging trolling motor batteries, lifts to operate, lights, etc. afraid going solar will not allow all slip owners the ability to enjoy the lake and also the cost of installing solar for a dock of 20 slips will be very expensive.
3. Request to modify docks can only be submitted once every 5 years. Concerned if this is the case it will limit the ability to make improvements as needed.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Solar Energy

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

Solar Energy

I also think some modifications need to be allowed to cut some trees down by docks because of the high in spring is becoming more rather 100 year.

Comments on the 2014 Master Plan: Recommend no change in current plan

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Markham_J-W

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? We own a boat

slip at 352 Hobbs Hollow slip #19 Shell Knob, Mo.
We understand that the dock at 343 Hobbs Hollow Shell Knob,
Mo is wanting to expand the dock by adding 4 slips. That
would make it almost impossible for us to get our house boat
out and very unsafe. It is hard enough now to get in & out
now because the dock is so close to us. We are in slip
Comments on the 2014 Master Plan: #19 which is closest to shore on the
East side. The best solution is for their dock to be moved to the
East side of the public boat ramp leaving room for the houseboats
to get in & out safely and they would have plenty of room for
expanding. PLEASE take this into consideration. Please
Contact us if we can answer any questions. Thank you -

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? The use and oversight of private docks

Comments on the 2014 Master Plan: *Personal property on private docks should be of no concern to the Corps other than, as it relates to water pollution and the float ability of the dock itself.
*As a dock owner that has spent a considerable sum to have underground/water electric dock service the 2027 Solar conversion mandate is rather extreme causing unnecessary cost to the individual.
*I don't see the value in roads/natural streams limiting the 200' vegetative reach. It would adversely effect several of my neighbors.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I think the way that the Army Corps of Engineers has kept our lake has been in the best interest of the lake and land. Table Rock Lake belongs to the people, it doesn't need more restrictions or stricter rules. I agree with it not being broke, leave the rules and regulations as they are and let the taxpayers enjoy their natural environment.

20170915_McCullough_C-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps.
Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Christine McCullough

Comments on the 2014 Master Plan: Appreciated the opportunity to express ourselves on these issues. My concerns are only about the removal of "safety" buoys, yet they are allowed to protect commercial docks--why are they exempt? This will only cause more accidents/deaths as well as people taking the law into their own hands. People will not read a sign posted on the dock (no wake). Second, Solar Power for docks. It was evident from the meeting this was not thought through. The Ranger we talked with didn't understand how electricity works. I

Strongly disapprove of this plan due to the cost, it's not safe, (and we have not had anyone on this lake or other Corp lakes die as a result of electric shock), as our docks are inspected. The batteries present another problem: storing the electricity, containers and where to place them, what to do with dead batteries (the lake?), what about docks with not enough sunlight to charge the system, how many boat lifts can be used on a charge? Will we do away with the safety aspect of dusk to dawn lights, if left on they'll drain the power. Please give these 2 proposals some more thought. I'm out of room for comment, however I do have an open line to my Representative and Senator in Washington.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Solar power & no buoys

Some people choose to ignore caution buoys & don't care if they damage your dock property BUT I like to think there are still some boaters on the lake that show respect to others property when they see buoys!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

Comments on the 2014 Master Plan: I don't feel solar power is any safer or designed for dock use at this time -- and too pricey!
Let's look at that in the future -- maybe something better & less expensive will be developed.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
use of golf carts should not be restricted. They provide needed means of hauling boating gear to and
from docks. They also help elderly be able to become more mobile to the lake for recreation as many
areas are too steep. To require permits is not fair nor necessary.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?
Electrical sources must be alternative in the future--will solar power provide enough energy to operate
multiple boat lifts on a dock? Will the shock hazard be any safer or prove to be a problem.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

1.) Mandated removal of utility electric power from docks.

2.) Mandated removal of 'No Wake' buoys.

Above opinion rating does not allow electronic selection so I write *Strongly Disapprove:(1)

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

I prefer the present Shore Line Management Plan to remain in effect.

Comments on the 2014 Master Plan: 1.) No reason given for the mandated removal of utility electric power from docks. 2.) Options to replace utility electric power to docks are capable only for intermittent use at best therefore inadequate for typical dock requirements re: charging of typical deep cycle trolling motor batteries would readily deplete the solar system storage batteries, solar is a very expensive and a fragile system so low reliability, adequate wind power is not feasible at this local. 3.) IF reason is to reduce risk of Electric Shock Drowning (ESD), better options would be 2017 NEC GFIC specifications for commercial marinas and private docks in use 30 years in Australia resulted in zero ESD and which provides continuous use service for low installation cost. A second option with same 'floating ground' as solar system for ESD protection is Isolation Transformer designed for vessels with onboard AC electric systems either onboard or on docks that connect to such vessels. These are more expensive than GFIC system but much less than solar systems and as reliable as utility shore power. 4.) In ground wiring would not detract from natural shoreline appearance.

→ 2 ADDITIONAL PAGES ATTACHED DUE TO INSUFFICIENT ROOM ON FORM

8/24/2017

#1. The COE has not explained that I can find why it wants to remove shore power from the docks and clearly have not seriously considered the high cost to dock owners to remove it and replace with the "alternative" power that you will allow. Nor have the COE considered how limited those options are to provide reliable electrical power for typical dock needs. Any system dependent on batteries is a finite system and current state of the art dock solar systems are only designed/recommended for brief intermittent power usage. It would provide only a finite amount of power versus the unlimited power availability of the present system. That finite amount of power is determined by the size of the system and various weather and other effects that impact solar panel power production. In addition it is the most electrically complex and as such the least robust against external electrical surge damage, the least robust against environmental component damage, the most expensive option to implement and expensive to maintain and repair. Battery chargers, associated with any engine powered watercraft, are considered a continuous power usage item by dock solar power system providers and are typically not designed to support because of the exponential increase in the cost and size of the solar power system that would be required is prohibitive in most real world situations. Recharging large capacity deep cycle trolling motor batteries in bass boats, usually two per boat, would easily drain the solar power storage batteries of a typical system. There are numerous other shortcomings with solar systems as well. On dock wind power suggestion is inappropriate for this lake location. If the reason to remove shore power service is reducing the carbon foot print where is that requirement in the authorizing legislation? If it is restoring the natural look of the shoreline how is that possible when electric lines are buried? If it is safety there are better solutions such as 1.] Class A (5ma) GFIC Ground Fault Interruption Circuit breaker protection on docks and 30 ma GFIC protection for service lines.. Presently GFI receptacles on docks are 15ma and the power lines to the docks have no GFIC protection. Latest (2017) NEC requirements for commercial marinas and private docks now specify Class A (5ma) GFIC Ground Fault Interruption Circuit breaker protection on dock and 30 ma GFIC protection for service lines to docks. This system has been in effect in Australia for 30 years (except 100ma GFIC for service line to docks) with zero ESD occurrences in that period. 2.] Isolation transformers used at marinas with shore power service to vessels with onboard AC systems and also on those same type of vessels which provides the same floating ground as solar systems 'safety' claim to fame. Isolation transformer(s) could be installed on the dock with GFIC protection added to the shore power line to the dock or Isolation transformer(s) could be installed at the shore power pole that supplies the dock. Either of these would provide CONTINUOUS power (not intermittent power) capability, are significantly more robust/reliable and at significantly lower cost ie better cost benefit ratio.

#2. Removal of 'NO WAKE' buoys is a degradation to the safety of people on and swimming near docks and the docks and boats moored there in or attempting to moor or leave slip . On dock signs as a replacement do not work as well do to basic human nature. People do not diligently scan for signs to read while boating or typically focus on staying 100' away. Rookie boat renters generally do not have clue. The buoy

8/24/2017

Provides an ever present in your face reminder/red flag of no wake beyond this point. Boats used on lake keep getting bigger and bigger so wakes are bigger and boats now often are designed deliberately to make bigger and bigger waves for wake boarding and surfing. Boat operators generally seek out quieter coves for their tubing and water sport activities which is where most docks are located. Whatever the COE has against no wake buoys there must be a better way to deal with it.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

The section on "Electrical Lines" is of major concern. The non-renewal of electrical licenses to existing docks after 2027 including the removal of existing lines and poles makes no sense. Currently electrical inspections are required as part of the renewing process for a dock permit every few years. It is unnecessary and in our view unreasonable to mandate removing what works well and is cost efficient to be replaced with something we do not want or need that will be very expensive for all the dock slip owners of our dock to make the change. Please keep the existing procedures of electrical inspections for permit renewal on existing docks. Thank you. Please do not require existing docks to change over to a "renewable energy alternative power source (e.g. solar or wind,)" after 2027. Thank you.

FROM: R. Layne Morrill

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Having had the opportunity to work with Table Rock Corps representatives since P. J. Condry, the progression, advancement, actions and reaction has often been the latter rather than the previous. Table Rock Lake is, has, and hopefully will be always be the "jewel" of the Arkansas River Basin and the Midwest part of the country. Let's keep it that way!

20170915_Morrill_R-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps.
Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

R. Layne Morrill

Subject: [EXTERNAL] Table Rock SMP comments

I have several comments for your consideration:

Dock Modification Approvals: please consider additional revisions for modifications due to storm damage or other similar matters beyond the once/five year proposal

No Wake Buoys: I have boated in a number of different locations around the country, both rivers and lakes. The physical presence of a visible float in the water is far more recognizable and apt to be responded to than a sign on the side of a dock that will only be seen if the boater looks to the side of his direction of travel. Our dock is on the inside of a 180 degree turn on the Kings River and I continually witness boats on full plane running 50' from the edge of our dock with no idea or concern for their wake. Once the buoy went out after this summer's flooding, no boats violated the 100' space created by the buoy. There was no stated reason for this recommendation and I wish you would consider placement of buoys to be a strong protector of the safety of swimmers and prevention of damage to boats in slips. Alternatively, make every dock put it's permit number on a buoy if the concern is that they float away and provide a graduated fine for them not being anchored properly if that is your concern. Again, I feel very strongly that there is far more downside than upside to this proposed provision.

Golf Carts on Corps property: Perhaps this is something that needs to be clarified, but as I read the proposal, no golf cart can be on Corps property unless it has a "handicap sticker". I get that this makes sense for vegetated areas, but I saw nothing addressing use of golf carts on grandfathered paved areas. There is a paved loop which accesses at least four community docks where I live. Please consider a clarification/provision for use of golf carts on the many hard surface areas providing access to community docks.

20170915_Morrow_D

Thanks for your consideration

David Morrow

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
My backyard is corp property. I have 2 slips in a community dock nearby.
Solar: too expensive - we don't have a prob. with electric.
No problem with electricity - regular inspections - no more power to fish cleaning -
boo

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Vegetative permit rules:
don't like "only remove trees 2" at ground". Should be as before - 2" at 4ft.
Should be able to park by dock. I like Solar however this will be
too expensive for me. It won't pay for itself.

Comments on the 2014 Master Plan: We said "plan is o.k. Don't change" however
you have made changes, not liked.

- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I love this lake and the way the Corp protects it has kept it beautiful (unlike the Lake of the Ozarks). Please don't remove the no wake buoys. So many of the smaller coves have NO protection if those are removed. There are many dangerous areas that visitors are unaware of, i.e., they have no idea of the trees right under the surface of the water. These no wake buoys provide safety for all. I personally think

20170915_Neal_D-WA

many of the buoys placed by the Corp are the most dangerous, especially at night. Could those be 'lit' via solar energy? Also, many boaters don't understand to NOT go between the buoy and shore, because the buoy marker is often so far out from any visible shoreline. In those areas, could additional warning buoys be placed?

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Dana Neal

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

Proper use of zoning for all to use and enjoy Table Rock Lake for many years.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? More logical thought to the use of docks for all to access the lake.

Comments on the 2014 Master Plan: The red zone area accross our cove is a wasted area. The resort owns the area. They already have their own dock. Moving the red zone accross the cove shows more thoughtfulness for use. There are 14 residences on this side of the cove. The community dock has 20 slips which have been full for many years. I am requesting a 2 slip dock which would have very little impact on the shore management.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

1. The elimination of "No Wake" buoys by 12/31/2020 and replacement by signs on the docks is totally ineffective. Dock damage occurs regularly even with the current buoys. More buoys are needed to protect the currents docks and boats slipped in these docks. Elimination of the bouys will result in extension dock and boat damage. Boaters do not read the signs on docks, buoys are the most effective method of controlling boat traffic. 2. Eliminating electric supplies to docks and replacement by solar powers is not a green solution. The placement of large battery banks on docks is dangerous and will potentially results in lead and acids being deposited into Table Rock Lake. Existing docks with shore power should be grandfathered in. The USACE is creating a potential environmental hazard and causing dock owners to expend large amounts of money to implement a foolish and ineffective source of power.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

The Water Patrol required the no-wake buoys to begin with. Putting a sign on a dock doesn't 'show' a boater where there should be no wake. I think you would be putting swimmers in jeopardy. No fishing equipment in dock lockers? Why? Put whatever you want in your lockers...as long as it's not fuel.

20170915_Newcomb_S-WA

Number of boats on the lake?? Why not limit the size of a boat on the lake? Makes more sense. You will t ruin TRL and Branson if you enforce this.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Susan Newcomb

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Solar energy requirement for docks is not advisable even if were limited to new construction only. I think this is setting up a classic case of unintended consequences of good intentions. Batteries will become a much bigger problem than current conventional electric power ever could be imagined. The cost burden of converting existing docks at a cost of \$5-10 million doesn't evidence common sense.

20170915_Newkirk_D-WA

Limited vegetation maintenance should be permitted.

What on earth is wrong with dock boxes on community docks?

Banning golf cart and their ilk from parking at community docks is unwarranted.

Ban No Wake buoys? We should do the opposite and increase enforcement. 75% of the boat operators don't understand the concept or know how to obey the No Wake rules now. Eliminating No Wake buoys is just asking to cause or increase accidents around docks.

What would be your reaction to a new government regulation requiring Corps employees to commute to work by bicycle?

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Dennis Newkirk

I would very much like to purchase a land permit to remove the brush on the corp land in front of my future residence in The Timbers on Indian Point. The lots that have been planted with grass on corp property next to the water look outstanding. It only improves the look of Table Rock.

20170915_Ostendorf_M-WA

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Leave the lake alone. We love the lake and are happy with our lake as it is.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

20170915_Patterson_K-WA

Sincerely,

Kathie Patterson

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Please don't change the shoreline management

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

20170915_Pearce_P-W

Sincerely,

Paulette Pearce

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I believe that the Corps should view themselves as an institution who values and respects and protects land owners and their rights and align themselves to see that they have every advantage and access and usage possible on their property. That no imposition be imposed, or hardship or any nuisances. In fact that they should guard against such infractions to those freedoms we hold dear. Property ownership

20170915_Peninger_E-WA

and the freedom to do with it as an owner sees fit without causing undue harm is our American cornerstone. We are no longer free men without it.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Elfrieda Peninger

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Requirements for solar or wind power. How in the world can this be accomplished. What is the purpose of this change?

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

How about the unsightly solar arrays, turbines? Dead birds from the turbines. The significant impact will be loss of individual ships/docks and proliferation of commercial mega marinas. Which are noisy, ugly, and coherent rated sources of gas, oil and fluid spills.

Comments on the 2014 Master Plan: It is poorly conceived and Draconian in execution

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Not being able to put a private boat dock in because we are in the yellow zone and close to the marina. Some have existing boat docks and most people don't. I feel Amendment 6 needs to be changed just because it's always been a way doesn't mean it's right. I feel we the people should have the opportunity to make some new changes. I don't feel the corp of engineer should make all the decision that costed all of us that pay the price to live on the lake.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? These are miles and miles of shoreline along Table Rock Lake that hasn't ever been touched by humans. I'm not saying cut trees down. I say let's keep the yards maintain to the water in neighborhood that exist already on the water. This will eliminate the rats that are in the weeds that come up to our house. I love wildlife but we have a fox in our neighborhood now that looks really unhealthy and starving. We have kids that like to play outside and

Comments on the 2014 Master Plan: fear the kids getting bit or something. I have seen so many snakes in our area due to the weeds. I understand that we need to protect our wildlife but we need to protect our children and our self also. We just bought this property last September and didn't realize we couldn't get a boat dock in this area. And all we wanted to do is go fishing and we can't even

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

Too much regulation

Requiring docks to switch power source is an unnecessary burden with many hidden costs that will not be realized until implementation...ie Are current dock roofs strong enough to support solar panels, storage etc.? Why not permanently grandfather all current docks, as has been done in other instances?

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

Comments on the 2014 Master Plan: _____

Over reach with the potential to impact tourism in a negative way!

Subject: [EXTERNAL] Table Rock Lake Shore Management Plan comments

Dear USACE,

Thank you for giving extended time to make comments. I just learned of this through Park Ranger Malcolm Fortson with USACE. I trust my comments will be helpful as you finalize your plans.

I have two comments on the Proposed Table Rock Shoreline Management Plan.

COMMENT #1

I am a landowner at Latitude (LAT) 36.687491 Longitude (LONG) -93.483397, just 285' due east of the USACE property line.

There is an extreme lack of Red Line Dock Zoning around here. There is virtually no Red Line Dock Zoning in our cove. We need more Red Line Dock Zoning at approximately 760 feet south/southwest of LDA 163, from LAT 36.687542 LONG -93.484985 to LAT 36.687022 LONG -93.484733. Lake Channel width at the narrowest point is approximately 260' and increases from there. With proper Red Line Dock Zoning, we could build a much-needed community dock there. I would be willing to provide a permanent parking easement on my property, and slip owners could have access via the permanent public fire road that is due west of my property that runs all the way to the USACE property.

COMMENT #2

I believe that the proposal to RETROFIT EXISTING docks with SOLAR is very expensive, and unnecessary.

- a) Safety is not an issue as USACE already has excellent safeguards in place.
- b) SOLAR RETROFITTING would create MORE safety hazards because people will try to bypass solar retrofits and will resort to using unsafe temporary means to get power to docks to utilize their existing lighting, existing air pumps for lifts, etc.
- c) Cumulative costs would be in the many millions of dollars for all dock and dock slip owners to retrofit.
- d) NEW docks would benefit by being all solar and being environmentally friendly.

Thank you for your consideration.

Jerome Pollock

FROM: David Pomerence

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I worked for USDA in farm program county level administration for 13 years and fully appreciate soil and water conservation/ Missouri River/public waters Corps of Engineers resource management responsibilities. I ask that you work to let market and other forces work toward the end result you see best and remember that owner self-regulation is the best enforcement - people change slowly.

20170915_Pomerence_D-WA

Keep up the education on concerns so the leading public can come to a good conclusion. Please don't rush to break what is working and doesn't need fixed today.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

David Pomerence

Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Before imposing 2027 requirements for all docks to be powered by alternate power source you could include with your new SMP what exactly will be approved as the power is inverted back to 120 volts which requires significant battery size and large inverters to power existing boat lifts. How these batteries and inverters are stored and protected will be important or are you even going to allow inverters. It is a known fact inverters and batteries can get extremely hot when over run or used. You need to set some guidelines as to what will be acceptable and allowed on each slip or does the entire dock have to run on one solar power source. This information would be nice to have prior to pricing for solar equipment.

No Wake Buoys 2020. These buoys are the only defense we have against unruly & drunken boat drivers trying to see how close they can drive past the buoy. Take them away and these same jerks will see how close they can drive fast past the front of the dock where our swim platform/deck is and our slip owner's children and grandchildren are swimming. "If you cannot see the danger in this" please take another approach to getting control of your NoWakeBuoys. I have sent this to the Missouri State Highway Water Patrol since I was told at the USACE Workshop in Shell Knob that NoWakeBuoys section of the SMP was their jurisdiction.

You could make it a little easier to get a LOP permit for golf cart use to get elderly people down & back to & from their dock. Maybe an age requirement of over 70. I have four people who use a golf cart now and are not capable of walking up hill from the dock to their homes but are not incapacitated enough to meet a medical permanent disability criteria nor would they want to be classified as permanently disabled.

Thank Scott

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
TO RESTRICTIVE TO THE LAKE COMMUNITY, PROPERTY OWNERS
AND TO PRIVATE DOCK-SLIP OWNERS.
NEEDS TO BECOME LESS RESTRICTIVE

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

I AM PART OWNER OF TWO DOCKS W/ ONE SLIP IN EACH DOCK. UPGRADES TO THE DOCKS ARE TOO RESTRICTIVE AND MEETING FEDERAL CORP REQUIREMENTS ARE TOO COST PROHIBITIVE.

Comments on the 2014 Master Plan: ALTERNATIVE 4-3 ARE HORRIFIC
ALTERNATIVE 4 IS NOT DESIRABLE FOR DOCK IMPROVEMENTS
ALTERNATIVE 5 ALLOWS FOR MANAGEABLE GROWTH
ALTERNATIVE 6 — NOT INTERESTED IN OVER DEVELOPMENT

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? No buoys for safety + protection of docks + shoreline we need our buoys. We

Our cabin is at end of Aunt's creek Wake boats have torn off our walk way 4th of July weekend Have waves that come over our dock (Not roof) Shoreline is also being eroded. Need to have wake booms on main part of lake. No coves.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? OK @ Solar

As per your 2010 study Aunts Creek high activity. Not asking for no wake boats just common sense to dock owners & shoreline.

Springfield, MO 65810
pfraider@mchsi.com
417-766-3196

Property owner: 110 Ruby Circle, Galena, MO 65656 (**Aunts Creek**)

Two Concerns:

The first is the **No-Wake buoys** for private docks. You state in the plan objectives “promoting safe use of the lake and shoreline”. Removing the buoys would be the most disastrous change you could make for safety of swimmers, canoes, kayaks and property, especially in lake coves & end of creek arms. I can tell you from over 20 years of experience of being a property & private dock owner the boaters either don’t know the rules or don’t abide by them, especially without some type of physical warning, like a buoy, not a sign. (tried that) A 18” X 24” sign will not be affective as a means to keep boaters 100 feet from docks. A neighbor tried a 4’ X 8’ sheet of plywood sign, to no affect.

I will speak to one specific area, Aunts Creek, however I’m sure this applies to many other areas. Your 2010 **“Recreational Boating Use Study for Table Rock Lake”**, which was done before wake board boats became so prevalent on the lake, listed Aunts Creek area in the highest category of 20 - 46 **“Accident/Incident Locations on Table Rock Lake”**. It was also the 3rd highest of 8 regions in boat count. It was rated UNSAFE by Marina, slip, and land owners, and ramp users on Table Rock lake. It was also rated 5th among areas boaters avoided. The two main reasons given were, (1) **“Crowding: too many boats, people, or traffic”** (2) **“Rough water, too many wakes.** It was stated in the study **“Many visitors desired restrictions on personal watercrafts and rule enforcement.**

From the section **4.2 KEY FINDINGS FOR MANAGEMENT**, **“To mitigate the negative attributes cited by boaters for why they avoid these locations (Aunts Creek), management will need to consider increasing law enforcement strategies to curb unsafe boating behavior, illegal behaviors associated with alcohol consumption, enforce or post speed limits, and remove debris hazards from the water.”** **“To manage for these qualities, it appears that these favorite locations should contain low speed or no wake zones to allow for calmer water, better fishing, and quieter solitude for relaxing.** **AND YOU WANT TO DO AWAY WITH NO WAKE BUOYS?** Makes no common safety sense. Again, to restate this Study was done before the high volume of wake board boats!

At the public workshop I was told by a Corps person that one reason for the decision on the buoys was because of the poor maintenance of buoys by permittee, damaged and keeping the correct 100 feet distance from dock, almost all more than 100 feet from dock. Instead of arbitrarily pulling buoys; ask why so many not complying? Solve that and solve the maintenance problem and keep everyone safer. ANSWER: Safety concerns for swimmers and private docks are getting beat to death by wake board boats. (True story, my float was knocked completely off my walkway, and laying on shore this past 4th of July weekend) The wake board boats are putting out waves the size of 35' cruisers and go into backs of creeks & coves where cruisers can't.

I know you can't ban these boats, however you sure can control their wakes by speed limits, no wake coves, no skiing areas or coves, and no wake buoys. This is a problem that absolutely needs to be addressed Now!!! We all have a right to naturally calm water for swimming & fishing without being ruined by wake board boats. If you are on the main lake, or beginning of large creeks, you should expect rougher water when fishing or swimming, but not in every naturally calm area of the lake.

One last thing mention by the Corps person was not moving buoys in & out as lake level fluctuates. This can't be a big problem if buoys are set correctly at 100 feet at the 915 lake level. Under normal circumstances small changes in lake levels either way doesn't affect distance that much. When there are big changes up there aren't a lot of boats on the water because of debris and down there are too many obstacle's like trees showing in water that keep boating down.

Please consider these factors when evaluating the no wake buoy change!

Second concern is alternative power source. What will be the cost to covert all docks on Table Rock lake to solar? 10 million plus. Why not commercial docks? A shore line without power lines sounds good, but is it really practical for "all" existing docks by one date. What companies are approved to do this & to what specs, will specs change later? Much more info needed from you rather just date to really evaluate change.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

" The Corps of Engineers regulates dock electricity just fine, don't touch it, it's fine the way it is, leave it alone.
" Leave the buoy buoys and the remainder of seeing them, they won't follow a 100 ft rule, they don't know now. There is no need for you to look in dock boxes that pinch property.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

" If you want to work w/ land owners to help crab harvest run off that's great. Your alternative #4 of shore line change looks fine.
" Dock box size, why do you care? and this location, what does that matter.

Comments on the 2014 Master Plan:

" On Our lake is a great place + it would like to keep it that way but SW Boaters propose that you have take it too far. Can't we just get along.
" We need buoys and have electricity alone, you regulate it just fine

1 2 3 4 5 6 7 8 9 10
Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
Signs & Buoys: The removal around docks seems to be unwarranted and could possibly heighten safety concerns for swimmers and boaters.
Counter Proposal: All signs and buoys must be for safety concerns, approved by USACE, mounted in appropriate places to be fully visible.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Remove mandate for Solar power for docks. Concerns: (1) The mandate will put undue financial hardship on all slip owners. (2) Solar power being inadequate especially in Fall/Winter and long periods of cloud cover. (3) Maintenance expense would be on-going. (4) To add utility power back-up for Solar would be feasible, but would add an overwhelming double expense.

Comments on the 2014 Master Plan: Solar Power counter proposal: New docks to be required to be Solar powered with the option of a utility power back-up system. Existing docks will be grandfathered to use utility power if maintained in a safe approved status per USACE Inspections.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
Buoys should stay in place. A sign on dock is much less effective. Allow us to continue having electricity to our docks rather than solar which will be expensive and ongoing expenses replacing batteries

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?
Buoys/Keep No solar panels on docks!
Allow Golf Carts to boat docks!

Comments on the 2014 Master Plan: Impose all rules and regulations on everyone if approved. Not just private property owners + private dock owners. Resorts & Marinas should comply too. If you really care about Table Rock during extreme high elevations - Require boats to stay away from shoreline and reduce speeds. Trees dye from high water for extended times

FROM: Rob Reynolds

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

My Family and Friends have enjoyed Table Rock Lake for over 18 years and we now have invested in a home on the lake for the last 5 years and have enjoyed every Minute of time on the lake with family and friends now all that is being taking away from us and we feel it will take that away enjoyment and safety. The Corp has clearly done a good job over the years in Managing the lake and shoreline. We all

20170915_Reynolds_R-WA

respect that and the work that they have done keeping the lake beautiful and natural. These new proposed changes are out of line and extreme. We respectfully request that the Corps not change the existing shoreline management plan and it has been working so well in preserving the lake and that people we know on the lake feel the same. Thanks for your consideration and preserving the lake with its current shoreline plan.

Sincerely
Rob Reynolds

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Rob Reynolds

Disapprove Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Lack of direct communication by Corps.
Meetings were ok, but you had to dig up
answers. Would have been better if corp had
made a real presentation with a speaker
and slides.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Comments on the 2014 Master Plan: Leave the 20 wake bouys in
place. Make this work by fining or reboking
permits where bouys are not maintained
properly.
Solar power may not be practical for a 20 stall dock.

Subject: [EXTERNAL] Shoreline Management plan comments

Dear Sir or Madam;

My comments are set forth below.

Golf Carts. The proposal for Letters of Permission (LOP) and a doctor's report or other documentation of physical impairment to operate a golf cart is discriminatory and will not solve what is only a perceived issue. Be prepared for thousands of medical reports from individuals. This requirement will limit elderly guests, pregnant mothers, children, parents with babies and countless others access to the lake that cannot obtain such LOP. Limiting this type of access will result in countless injuries, heart attacks, falls, etc. caused by carrying coolers and other items to the docks. Golf carts only affect a minuscule fraction of the shoreline area. Please leave this alone. Why deny or limit access to land that has been here for 4.5 billion years? I do not think that a few people driving on it will hurt this land. The Corps inability to control flooding has done more damage to the shoreline, especially in the last 7 years, than what thousands of dock owners could do.

Alternative Power on the docks. This is an ill-advised solution searching for a problem. Solar conversion will be an extreme cost to thousands. One dock owner paid over \$4,000 to convert to solar power. Millions of dollars will have to be spent for no good reason. This discriminates against the poor and elderly. The replacement of back up batteries every 4-5 years will be a continuous financial burden on property owners. Thousands of old batteries will absolutely be thrown into the lake every year, causing pollution and substantial harm to the eco system. It will be very difficult for the elderly to replace batteries. Electricity is clean and safe. In the alternative, the Corps could require annual or frequent inspections by reputable vendors approved by the Corps. Table Rock does not have the issues as does Lake of the Ozarks in which every death I researched was caused by egregious electrical code violations that do not exist at TR, and would not with inspections. Solar energy is neither constant nor reliable. Safety lights at the end of docks would go out resulting in dangerous conditions for boaters. The Corps will be sued when these foreseeable accidents occur. We will not have the availability of reliable,

20170915_Rider_C

dependable electricity. Will we have safety lights for dock use at night? Will the lifts work reliably at night? Will we have power to operate medical devices and emergency equipment? Many dock or boat repairs by vendors will require them to bring a generator, resulting in more danger and pollution.

Buoys. This is inexplicable. I thought these protect the shoreline and private property. Buoy use is not excessive.

Controlling vegetation. Again this is a solution looking for a problem. This lake has a terrible snake problem.

Limiting lake use. Also this is not an issue, but if it ever does become one it will solve itself. People will move. Maybe it's time to build another lake.

Modifications. The 5 year restriction for modifications of docks is arbitrary and unreasonable and only limits the Corps work. These docks are so overly regulated that there should not be this type of restriction. This is most likely a moot issue as many will not be able to afford modifications if solar power is required.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

I don't understand why you would come up with six alternatives. There are line items in each that people agree or don't agree with. It makes no sense to remove the "no wake" buoys. If some private dock owners are not maintaining them, "fine" them, don't remove all the buoys. Do you really think a sign on the dock will protect docks more than a buoy? If the signs are so good, will all the buoys be removed at the marinas? _____

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

The biggest item that has changed since the last (MP); you have not addressed and it has been brought up at every public meeting. THERE ARE BOATS ON THIS LAKE WITH FILLED WATER TANKS SO THEY PUT OUT AN OCEAN WAVE TO SURF ON. These waves, over two feet high, hit the shore with a force that destroys the shore line. Many dock owners have had big repair bills from the damage.

In your last (MP) literature, you state, "The Table Rock Lake SMP establishes policy and furnishes guidelines for the protection and preservation of the environmental characteristics of the shoreline while maintaining a balance between public and private shoreline uses." There is even talk at non-Corp lakes about outlawing these boats. The least thing that should be done is to limit their use on the narrow arms of the lake.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Riepl_A-W

[illegible]

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

It appears the Army Corps is becoming more intrusive. The Corps should be more inclusive, work with the land owners, collaborate, keeping the lake clean and beautiful should be win/win. Enforcing rules for driving a golf cart on corps property is a waste of talent, money and energy. Forcing tax paying citizens to switch from electricity to solar in an agenda. Ironical that the Dam was built to create electricity. All docks are inspected before permits are renewed keeping them safe. And let's lose the "We don't want to become the lake of the Ozarks" theme. If it were going to happen it would have already happened. The Corps rules have kept it so. Let's not act like we need more.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

I'm not sure I understand the question. If there was no impact why is a revision necessary?

Comments on the 2014 Master Plan: Golf Carts should be allowed on Corp property. It is difficult to get coolers full of soda and water to the dock. Elderly folks are not capable of carrying heavy items 2-3 hundred yards. Forcing solar on citizens is expensive and over reaching.

Subject: [EXTERNAL] shoreline manegment plan

We have been vacationing at Table Rock lake since 1977 and mow have bought some property on the lake to build a new home. Since the early 1980s we have noticed that the lake has becoming less clear as time has gone by. Wes are afraid that the new Rules proposal will only make the situation worse with the shoreline almost 100% available for boat dock placement and being able to put single boat slips in almost every cove We would think that this would only make the clarity problem worse. Fishing will also be affected as there may well be no where to fish of the main channel with coves full of these boat docks., instead of in one large boat dock in one or two places in a cove. As these and other rules become more relaxed, we would hate to see the result being another Lake of the Ozarks. Please keep the rules as they are now and with no changes, the lake may have a good chance to clear itself as it has seem to have done in the past.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____
Absolutely opposed to throwing away our \$25K investment
in underground shore power. NO SOLAR for existing docks!!
Solar docks, des: Not enough power. Not reliable.
Too \$\$\$ expensive. Batteries leak & corrosion goes in the lake.
Solar is a great supplement to shore power, but a less preferred.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
LANDOWNERS Should be able to woad the 200 Ft from their
House, RV, Camper, Shop if they have been there 5 years. think.
I Do not like CRSD they are terrible for people near it.

Every year or so get together and have a meeting and explain the Rules
I think would help. I learned a lot at SK!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Comments on the 2014 Master Plan: I went to the Shell Knob public meeting Great
Job getting out info on MP. 137- Please get rid of any Future CRSD
they are terrible for the community near it. I Do not agree
pulling no wake boay's most people respect them. Please work
with MHP. to slow the Big Boats down Overall I am
VERY pleased with the CORP. Thank you!

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

The No-Wake Buoys for large Private Boat Docks on a main channel should be allowed. These buoys in coves might not be as important. Please consider allowing No-Wake Buoys for Private Boat Docks in a main channel. Removing these buoys in the fall and replacing them the next spring could help with positioning issues. The SOLAR mandate for large Private Boat Docks should be reconsidered. SOLAR might be fine for a small Private Boat Dock, but issues are foreseen for the 20-SLIP Community Boat Docks.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Please see the attached documents relating to the

Environmental Assessment and the mandate to move from GRID to Solar Electricity for Private Boat Docks on Table Rock Lake. Green Energy is desirable and should be used, when appropriate. However, some trade-offs moving from GRID to SOLAR can be negative. As for SOLAR being a safer alternative to GRID, many opinions are available. A GRID system is simple to own and operate, and well understood. This is not so for SOLAR. Therefore, the mandate seems unreasonable for Private Boat Docks. An option to keep GRID systems safer might be to require more frequent inspections via licensed electricians. These inspections would support your goals of "safe and healthful recreational activities", as outlined in your "Title 36 - RULES AND REGULATIONS" document.

Comments on the 2014 Master Plan: A comprehensive plan that covers many topics, and each topic is covered in great detail. The plan indicates several future upgrades to recreation facilities, which will improve usage. Of note are the 50 Amp Electric Service Upgrades for several of the recreational areas. No mention was made of the power source for these upgrades (GRID, SOLAR, WIND). Elsewhere in the plan, several comments were made about "sustainable environment". If the two plans (SMP and Master Plan) compliment each other, then SOLAR or WIND or other form of GREEN ENERGY would need be used for these Electric Service Upgrades. Remember that Executive Order 13514 applies to all Federal Agencies, that includes the Corps of Engineers.

20170915_Saxton_T

Windy Bluff Boat Dock (Permit 8239) SOLAR Generation of Electricity

Points to consider before migrating from GRID provided electricity to SOLAR:

Grid Electricity is simple, reliable, and almost maintenance free. Utility companies provide and maintain the infrastructure to deliver the electricity to the end-user. The end-user panels, fuses, wiring and GFI protected outlets are easy to install and maintain by licensed electricians. These items contain no hazardous materials! Replacement components of the end-user infrastructure are easy to obtain and at low-cost. Grounding is easily solved. The applicable National Electric Codes (NEC) are established and easy to implement by electricians.

SOLAR Generated Electricity is "GREEN ENERGY", but not simple or maintenance free. The components include panels, batteries, racks, charging controllers, fuse boxes, shut-offs, inverters, wiring, and monitoring systems. Some components contain hazardous materials that could end up in the lake or for sure in landfills. The components must be protected from the elements of nature. Special enclosures that limit dust, dirt, and moisture are a must. Grounding and Ground Fault Detection issues are paramount and must be properly addressed. Fans are needed to allow for air flow and ventilation within the enclosures to help with cooling, humidity and removal of noxious gases. Offsite monitoring provides assurance that all systems are operating correctly for remote SOLAR locations. Maintenance agreements can include a preventive maintenance routine. The complex system requires record keeping and documentation that must be kept up to date. Hostile environments add issues for installation, maintenance, and can cause premature component failures. Replacement components can become an issue with respect to availability. Spare parts on-site are recommended, in some cases. The components will require increases to insurance coverage. Warranty coverage for failed components can become challenging. The National Renewable Energy Laboratory (NREL) document, "Best Practices in Photovoltaic System Operation and Maintenance, 2nd Edition, dated December 2016 - (NREL/TP-7A40-67553)", provides a comprehensive review of operation and maintenance issues for SOLAR Systems. NREL is a national laboratory of the United States Department of Energy. Following the best practices will allow for a safe and reliable SOLAR System. **If the best practices are not followed, then performance and safety issues could result.**

The Windy Bluff Boat Dock (20 slips) obtains electric power from the Ozark Electric Cooperative mainly for the operation of lights (CFL and LED) and boat lifts. This co-op and many others obtain electric power from a number of sources, which include solar, wind and hydro. The Dam at Table Rock Lake is one of these sources, and it generates 640,000 MWh/year of GREEN ENERGY. Thus, one could say GREEN ENERGY is now being used.

The mentioned Boat Dock is located in an area that is not closely supervised on a day to day basis. Thus, a SOLAR System could be vandalized or components stolen. If this happens, then unprotected live wires could result in safety issues for those on the dock or near it in the water!

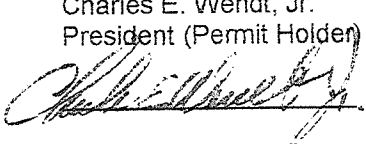

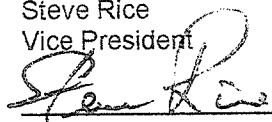

It is the consensus of the Windy Bluff Boat Dock Officers', that a SOLAR/WIND mandate for private docks on Table Rock Lake is unreasonable.

December 2016

Contract No. DE-AC36-08GO28308

U.S. Army Corps of Engineers, Kansas City District Pomme de Terre Lake Project Shoreline Management Plan

Electrical Service Requirements:

- i. All electrical service must have a set of detailed plans on file and be signed by a Certified Electrician and may be achieved in 4 ways:
 - a. Solar Power.
Solar power is preferred/recommended option for providing electrical service to private docks. Requires engineer certified plans, must meet all national Electric Code (NEC) provisions. Solar power does not require a separate License, will be inspected during the **annual dock inspections by the Project Office**, and owner must have written approval prior to installation.
 - b. Line Power.
Line power is the extension of an overhead or underground electrical line which provides electrical service from an existing line. Requires engineer certified plans, must meet all National Electric Code (NEC) provisions. **and will be tested during the annual dock inspections.** Requests for line power must have written approval prior to installation. Request for line power will only be authorized in locations that require a minimal removal of trees or disturbance of the area. Installation of line power will require a separate Real Estate License issued through the Kansas City District Real Estate Division, the cost for this license is determined by the Real Estate Division.

(Generator and SOLAR DC Only options are being omitted from this extract.)

MASTER PLAN FOR DEVELOPMENT AND MANAGEMENT OF TABLE ROCK LAKE

Revised Final: February 2014

k. Recreation Facilities, Activities and Needs

(2) Recreation Areas

Cape Fair-

If adequate funding becomes available for park operation future improvements include the following:

Rehabilitation and modernization to campsites 38 – 82, including upgrading utilities to 50 amp electric service and adding water to each site.

(Several other sites reflect additional electric upgrades too.)

2-24

GOAL B: Protect and manage project natural and cultural resources through sustainable environmental stewardship programs.

The objectives in this Master Plan to the best extent possible aim to maximize project benefits, meet public needs, and foster environmental sustainability for Table Rock Lake.

3-3 & 4

20170915_Schliem_J

The regulations and penalties being proposed are alarming and threatening to our well being, our land values, our love of lake and even our care for shoreline cleanup. It's unbelievable to read all these "thou shalt not" rules! This is Agenda 21 - a dictatorship and communist control, which we will not accept. For an organization to have power with that much control over the people who love and care for this lake, is not the American way. Then you use the pretext of saving the Environment and go way overboard, which is to keep us from using the lake let alone being able to get to the lake and our shoreline for dock repair! Your demands and the expense of what they are proposing is insane and who can afford it the high cost that will be put on our backs?

Stop this insanity right away! Where do you get off that you employ all these people with such controlling ideas? We are angered and sick to death about this. You keep shortening our docks and actually will not even let us use them in the way you govern. Remember when you had us remove diving boards? Remember when you had us remove the water pumps out of the lake for fish tanks. Ok, these were fine safety issues. But now you demand solar power, etc? Hey, could many of you afford such a cost? We are retired down here! We don't have cushy jobs like you do and make lots of government money! You don't have any common sense at all nor do you care for the people who help keep our lake clean. The last rules and regulations back in 2014 are rigid and no more new Master Plans! Hear us!

20170915_Schliem_W&J

First of all, you don't have enough room for comments on your sheet! We STONGLY DISAPPROVE with this horribly constricting plan. Why didn't you hold meetings long before publishing the draft of your Shoreline Management Plan so we can give you input? Will you now hold meetings for us to attend that is just on this topic only and give us a chance to speak out finally? Your recent gatherings were not of any help - so many people and talking different topics. There's no way to get up and comment to the group as a whole! How do we know you read these comments and count them correctly? We want to hear what the people say! You have taken away so many rights that this is unAmerican and more like communism/dictatorship. You are following the World Path of Agenda 21! You have WAY too much power and it must be taken away.

Reduced Recreation Areas!

This lake is for flood control, provide power for power companies and for recreational use by tax payers. There's enough room for all; you should not be cutting back from Public Recreation. Your salaries are paid by us, the tax payers, in case you didn't realize that! We know we pay high taxes!

Private Floating Docks -

We hope to be building a new dock and we want our new dock to be rebuilt with the same size slip we have now (15 by 32). We don't like your maximum size now of only 12 x 30, boat length can't exceed the dock length so then allow longer slips to accommodate a 32 ft boat!

Now you are reducing the boat slips and launching ramp parking places. WHY? You are making fewer spots for launching boats so you can control us! We also don't want solar power! It's expensive and you already make a mint charging us for our electric wires that go to poles across the water, or we should have wires placed safely underwater and not overhead but we don't want solar? You have to realize that people don't have a lot of money to put into a boat dock once it's built.

What is only every 5 yr permit period to modify docks! Why a special period on that? Why not modify as it's needed! Again CONTROL by an entity that doesn't even have to report to congress!

No Wake Buoys allowed! Are you crazy? This is for the safety of the dock owners. Big deal to place a NO Wake sign on the dock! Who's going to see that or even abide by it! Why don't you instead outlaw the added "big wave kit" that is now attached to ski boats for larger waves? That would save shore erosion and damage to our docks. You make no sense at all!

No Parking on Corp Property!

We can't use the corp property for parking? If we do, you will make it a felony! Where do you get such a right? Insane! Do you have a list of private land owners who will let us park on their property like their yards? NO? Of course not! You certainly haven't given any thought to your comment that we have to get permission from a private land owner! There aren't any such spots and you are telling us we can go to pound sand because you want tall vegetation, weeds and snakes moving along the shorelines even though we have to get to our docks somehow and you don't give a rip! Well now you realize how stupid this action is. It means no one will have any place to park. Who's going to maintain the so called 6 ft wide path??? How do we keep that clear so people don't stumble & fall?

Who do you think takes good care of the property if it isn't boat dock owners. We have many senior citizens who may not need a handicap permit but do have trouble walking over dead trees and large rocks, rough terrain, etc. Let us have our golf carts or whatever down to the dock to carry supplies to our boats and park! It's ludicrous! Then the threats to block us from using our boat slip? Is that legal? Oh yes, I'm sure you have the lawyers lined up and ready to attack us.

Dock Repair? Dock companies aren't allowed to drive down the to dock to repair? Really? How in the world will they get work equipment down there? Another idiotic idea. CONTROL ABUSE all the way around. Where is your common sense?

gell

Burning

You know it's the high waters that wash away the vegetation, don't you? We don't touch it, but we do need to burn the tons of wood that comes onto our point along the Kings River that has wood passing through that looks like we could walk across on it shore to shore. Should I send you my pictures for a reality check? I'd be glad to do that; which year would you like? Many huge dead trees end up on our shoreline point. It gets piled way up high all over the corp shorelines and huge trees end up on top of our dock cables! They have to be cut up and shoved off to be burned. There have been bales of hay, tires, other debris piling up. This comes from wash out of all the gullies in these hills! Now you are telling us that we can't do a clean up on shoreline to make the lake cleaner and safer? We have to get constant permission from you just for that and only after a flood? Have you seen Kings River Marina? They have to push the wood on out on the lake and it lands down here. We don't hurt the vegetation. We all must live together and protect our environment but my gosh, we are way over doing this environment program of yours! We don't need to be barred from taking care of it. Oh yes, it's your power and control thing again!

Carrying Capacity

We don't believe your numbers. Let me inform you, we have so many people that do not even use their boats that much and some don't ever go on the lake any longer. Usually these are older people or part timers. Your count is not actual; just because you claim the 30K boat slips as boat count doesn't mean they are on the lake. Our experience is one boat dock of 12 has 2 active boat slips- your numbers are screwed up! We don't believe your 60% increase either. It doesn't match up to non-used boat slips.

I'd be glad to show you dock for dock in our immediate area of how many actually use their boats/ slips. You certainly can't claim each boat needs 10A's. You are wrong to put a stop on how many boats can be on the lake. Besides how will you control that? You didn't explain that in your document. How much money are you foolishly spending to control this! Oh no problem for you, it's only wasting OUR tax payer dollars! This is way out of line! Take this into consideration, you are taking the number of boat slips and you make it sound like they all are out on the lake at the same time.

Bottom Line:

This is the most horribly written confining water control plan ever set forth. You have made the tax payers prisoners on our own recreational lake. Granted there is some control needed by the Corp but seems you have gone way overboard and don't give a rip about the people who pay you. You will ruin this economy on this great lake. We love it more than you do and try to always ensure that floating stuff is picked up and trashed; especially that which hits the shoreline. You should appreciate that work from your citizen/taxpayers. All these rules are unreal! 1 boat to every 10 Acres, Can't park on corp property to get to our own boat dock, fewer recreation and launching places, no buoys, no burning when we have enough wood on the shore to start a saw mill, etc, Totally unnecessary to have such strict and rigid control.

Army Corp of Engineers - you have too much power and it needs to be taken away! We must at least have you reporting to congress so we can get help to relieve us from all your dictatorship. ,

20170915 Schulz J

1. "No Wake" Buoys- Feel that if they were removed it would result in excessive damage to docks and boats. With the Buoys, the boats slow down when they come to them. If they were not there most would not slow down until they get to the dock and by then it is too late.
2. Requirement to convert to Solar poor- Dock owners should not be forced to incur the expense of converting to Solar. If it was beneficial economically they would be wanting to do it voluntarily.
3. Walk ways and lockers- plan says that lockers are permissible on the docks but also say that there has to be 30" of walkway clearance. Most docks have 48 in. wide stringers and most lockers are 18" to 21" in depth with many being at the 21" depth. Most of the lockers are at the end of the fingers and the fingers are closed at the end so having something less than the 30" is not a problem anyways. Having at 30" clearance will mean having to move or change out many of the lockers.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

The possibility that piers may be removed -
safety concern. The cost of converting
docks to solar or wind.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Comments on the 2014 Master Plan:

I am new to the area & still trying to
educate myself about this. However, I believe the removal
of piers could pose a safety concern, especially to
community docks. I also have concerns about the cost
logistics of switching to solar.

Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
Two issues - Saline Pavier - San docks and Power Line removal
This is another cost that the Corps places and dock owners. All lot of people
on the lake are retired and on fixed income. This will cause a burden
to them.
Removal of No Wake Boats - This will increase damage to docks.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?
The restrictions on new docks has caused the price of a dock slip
to double or triple. Most people cannot afford to buy a slip on the
lake. This restricts dock ownership to only rich people.
The wake boats in coves now are causing damage to existing docks and
removal of No wake Boats will cause increased damage.

Comments on the 2014 Master Plan:
I am happy with the Corps management of the lake so it does
not turn into the lake of the Ozarks. But there present direction
is going to increase the cost of owning property by the lake
and it will drive people away from the lake for
recreation.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Selden_K-W

TO: Corps of Engineers Decision Makers

FROM: Ron & Sue Shrum

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Our biggest concern is being able to access our dock slip that our family has owned since 1980. There is no public access to our dock and we must be able to go thru the private property. Due to disability permit we need to use a golf cart.

20170915_Shrum_R&S-WA

If we are understanding the new guideline to limit new ownership of docks within 200 ft of private property to owners of land adjacent to dock then I see several problems. For example: Our dock has 8 slips with 4 owners. 2 of the owners have lakeside first tier property. 2 owners have 2nd tier property further away from dock.

1. If one of the owners wanted to sell their slip now or in the future - would they be limited to sell the slip to lake side property owners only? What if these people were not interested in buying another slip?
2. This seems prejudice against those that do not have lakeside property.

IMPORTANT TO GRANDFATHER EXISTING DOCKS.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Ron & Sue Shrum

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

[illegible]

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Removal of Buoys on the lake is unreasonable. These buoys provide a reminder to boaters to stay away from docks and it also provides a level of security for swimmers near these docks. The proposal to require all docks to go solar is burdensome. properly grounded docks don't create a problem. Solar is NOT the solution. Direct current from solar is as dangerous as AC

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Hunts Creek Should Be A NO SKI COVE. If, as your referenced study shows, that a maximum Density for Safe Boating is 10 acres/vessel this is a "NO Boater" area. Often times this is greatly exceeded thus creating a Hazardous. The oceanic nature of this activity increases that Hazard.

Comments on the 2014 Master Plan: The Corp seems more concerned about moving for "erosion purposes" than they are of wave action erosion. Wake Board Boats create a high erosion problem, especially when they concentrate in one area over and over. These boats also damage docks and buoys in those docks. All of this could be avoided by creating "NO SKI" areas in the high use areas - near public use

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

This plan is just another way to restrict fishermen from having access to the lake. Guess who is going to be told they cannot use the lake because the quota is reached. It will be fishermen not the family with kids that you tell cannot put his boat in the lake. The access to the lake is hard enough already. We do

20170915_Smith_D-WA

not need these proposals. They will only have a negative effect on the people who live and use the lake for recreation. Thank you.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Donald Smith

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

[illegible]

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Removal of No Wake buoy & private & community docks. Outlawing ATV/Golf Carts & access to docks & Banning of Water Toys (tubes, Ski's, Wakeboards etc) from docks. Continuing Marring Buffer Zone: they control 1/3 of the slips already & The too strict restrictions on pruning trees.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? The restriction bar on access to docks by ATV/Golf Carts don't make much sense. The older population is getting older making walking up & down the hills difficult if not impossible.

Comments on the 2014 Master Plan: As a whole, I believe we should leave well enough alone. The proposed fixes will break what's already working. A lot of what's proposed seems to be growth of an already burden of rules + regulations. The Corps seems to be unresponsive to the public's wishes.

1 2 3 4 5 6 7 8 9 10
Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
changing current conditons, whereas Corps' mission is to "maintain" current conditions; object to new docks/slips - we do not want Table Rock to become a Lake of the Ozarks; strongly object to solar power/battery storage requirement - solar power is unreliable, expensive; battery storage is more dangerous/risk than power lines; power company may raise rates to makeup lost power demand, increasnhg our overall power costs; object to removal of bouys - no one will see signs on docks

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?
an additional 19,000 slips/boats will significantly increase potential for water pollution, lake congestion
what is the legal requirement for solar power? appears to be only policy
vegetation management proposals too restrictive, need more lenient policies to maintain dock areas
as current vegetation continues to grow

Comments on the 2014 Master Plan: maintain, do not change

COMMENTS REGARDING THE CORPS'
DRAFT SHORELINE MANAGEMENT PLAN

John Spencer
33 Vern Road
Kimberling City, MO
703-728-44549
jcspencer14@centurylink.net

1. Removing NO-Wake buoys would create a hazardous environment for the hundreds of owners that swim off the ends of the existing docks. Boats and jet skis would feel free to approach the ends of the docks at speed rather than stay out a safe distance. Additionally, creating and carrying wakes closer to the docks increases the water motion and strain on the dock structures which would result in more structural failures and additional maintenance costs to the owners. **The proposed signs at the ends of the docks would imply that the NO-Wake zone begins at the end of the dock and would totally defeat the purpose of a NO-Wake zone!**
2. While going solar for power at the docks is, in concept, a great idea, the proposed time frame is not practical and the costs involved would be excessive. **A better goal would be to have all new docks and replacement docks be required to be solar. Existing docks that are not being replaced should be grandfathered in and required to change upon replacement.**
3. The proposed requirement to allow only one request for dock maintenance/repairs/upgrades once every 5 years is ridiculous. Implementing this change of only one request every 5 years would result in a significant increase in the number of unsafe docks across the lake since the owners would be unable keep maintenance and upgrades current. **If the Corps' feels there must be some type of restriction then it should be something on the order of one every 6 months at the very maximum. There should also be a SIMPLE process to address emergency repairs outside of any time frame restriction.**

Name/Organization : Lyman Squires

Address: 26511 Pine Bluff Ln
Golden MO 65658

E-mail: lymansquires@gmail.com Phone: 870 423-9020

We want your input during this update process. Please use this form to provide your comments and suggestions on items to update in the Table Rock Lake Shoreline Management Plan (SMP). Areas of discussion might include: current zoning, current policies on dock and vegetation permits, how could the lake and permits be better managed. Please be as specific as possible.

A policy change is needed regarding the invasion of Red cedars.

They are crowding out the hardwoods, increasing the fire hazard
and blocking out some of the once beautiful lake views.

TO: Corps of Engineers Decision Makers

FROM: Chris Stack

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

No Change

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

20170915_Stack_C-W

Sincerely,

Chris Stack

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

- ① More 1 & 2 stall dock permits will lead to dock proliferation and more environmental damage
- ② Carrying capacity language is vague & not enforceable
- ③ No change to vegetation permits, need to enforce current regulations.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? None

of No Significant Impact prepared for the Shoreline Management Plan Revision?

~~Do not~~ Do not believe it. Added 182 small boat docks will have adverse effect on lake & shoreline environment. Keep regulations the same but enforce them. High lake levels do more to hurt environment.

Comments on the 2014 Master Plan:

We want your input during this update process. Please use this form to provide your comments and suggestions on items to update in the Table Rock Lake Shoreline Management Plan (SMP). Areas of discussion might include: current zoning, current policies on dock and vegetation permits, how could the lake and permits be better managed. Please be as specific as possible.

I would like very much if we could keep the buoys. I believe removing them would cause accidents by boaters not slowing down, especially in coves where there are children swimming. Also, I am not in favor of the solar panels. For a 20slp dock, how many boat lifts would actually work on a cloudy day or boats coming home after dark. Again I think it would not be safe also if the lights do not work because a lack of sun to energize the

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.

-I object to the new non-transferable grandfathered vegetative management permit rule.

-I object to financial hardships of removing electricity from the lake.

-I object to only one request every five years for dock modification.

-I object to the 8' depth requirement for any new docks.

I am encouraged that the public's comments during the process have been acknowledged by the Corps.
Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Ashton Stephens

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? There are not a great deal of changes from current management. I appreciate the efforts to continue to maintain the integrity of the environment and water quality. I would tend to be more conservative but appreciate the balance required with increased use. Also, not to support some increase in use for others just makes me selfish.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? My only concern for the overall plan is that I did not see anything specific to preserving or restoring natural habitat in low use areas (perhaps budget and not the focus of the Corp). I would be very interested in assessment of current plant life in low use areas and to see plans (maybe with Div 8 or NIDE) to remove inappropriate non-natives and restore appropriate native plants -

Comments on the 2014 Master Plan: Good Luck and thanks for all the hard work! It saddened me to see law enforcement required at the work shops. I sincerely hope all the Corp representatives that were there were treated with respect!

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
I AM VERY CONCERNED ABOUT THE SOLAR POWER PLAN IT WILL BE EXPENSIVE AND HARD TO MAINTAIN WILL PROBABLY DRIVE US OFF THE LAKE, REMOVING OUR BUOYS WILL TEAR UP OUR DOCKS AND BE DANGEROUS FOR OUR GRANDCHILDREN SWIMMING. THIS HAS THE POTENTIAL TO LOWER THE VALUE OF OUR SLIPS AND HOMES.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

I am very concerned about the solar power plan. Not only will it be very expensive and hard to maintain, but it could drive people off the lake making our homes and ships lose value. Another area of concern is removing our wake buoys from around our dock. This could tear up our dock and make swimming hazardous and we have young grandchildren that swim off our dock. This could be quite a liability!!!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____
Solar Power, Buoys, and the lack of allowing community boat docks the same amenities as Marinas

Solar power what are you thinking. No Significant impact, are you kidding. Try paying for it yourself. We have ours inspected every five years and maintained in between. The sun has to charge the expensive batteries. No sun NO LIGHTS at night and no power for lifting your boat. Fishermen charge there batteries at night for the next day. No power for lights and lifts.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? The current buoys are a reminder to slow down putting the warning on the dock is 100 foot to late. Do you boat on Tablerock? The buoys are better than nothing. Back to Solar. We currently have minor repairs like to replace a GFCI (15.00) maybe 42 inches off the deck. Try replacing a solar panel. Oh, its on the ROOF cost ??? Batteries weigh 40 lbs. and cost is NOT \$15.00.

Comments on the 2014 Master Plan: _____
Why can't the Community Boat docks have creature comforts like the Marinas??? Lots have a 40 plus ft house boat with BBQ, TV, refrigerator, and outside furniture. They also have similar dock patios with the same items. Yet the Community boat docks are told they can not have such. This is 2017 not 1850. Lets treat all docks the same. Cost to the Corps nothing if the dock has room for creature comforts which they pay for, maintain, and insure they should be allowed to have it.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?
Safety issues: No wake buoys protect swimmers at the dock
Boat concentration and size/type is a safety issue.
Smaller channels can not take any more traffic
Esthetics: No one wants a view of dock reefs. Please limit new
docks!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?
In our area erosion has increased with wake boats & larger boats.
Solar power for new docks where feasible is a good idea
but do we have good electric storage options? How many
batteries will end up in the lake?

Comments on the 2014 Master Plan:
Enforcement is a big issue! We see dozers
on the corp clearing all vegetation! Docks are built
right next to the water. If you have rules, all
must comply.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

Noise Control

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

Noise control. - I think that something should
be done about the noisy cigarette boats zooming
up & down the lake. They should not be allowed
to run by 7am or after 8pm. We live on the
lake & when they go by we cannot hear each other
shout. There are families
using the lake & if a skier gets injured while
one of these boats is roaring by - no one could
hear them! I think motors should be limited to
500 cc horsepower & noise!

Subject: [EXTERNAL] Lake Comments

I appreciate the opportunity to comment as we own a home and dock.

I do believe and understand the regulations are needed so it doesn't turn into the "Lake of the Ozarks".

I believe we should keep the buoys as it is a safety factor as boaters are more apt to see them vs signs on docks especially while pulling someone, etc.

I also believe and like the idea of going all solar for multiple reasons but most importantly safety.

Thank you,

Brad Thessing

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I know the Corps mission, but this district is killing the fishing and business. Particularly in Table Rock and Taneycomo

Please leave this crap plan in the garbage can where it belongd

20170915_Thomison_S-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps.
Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Stan Thomison

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Please leave Table Rock alone.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

20170915_Thompson_J-W

Sincerely,

Julie Thompson

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

I would not have access to my dock if I could not take a golf cart from my house to my dock. I currently have a letter from my doctor stating this arrangement is necessary for me to get to my dock. Once I get to my dock I would like to be able to sit in a chair and have my fishing gear nearby so I can fish!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

Landowners may be without power to operate dock operations. Lights are absolutely warranted for safety and security. The cost to switch power sources would be prohibitive and how environmentally sound would it be if batteries freeze-releasing acid in the water?

Comments on the 2014 Master Plan: _____

The current plan in place is effective; the no wake buoys are necessary to protect swimmers by docks and help prevent unnecessary damage to boats and docks.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

What I am really against, is forcing SOLAR DOCKS ON US.
I was on a SOLAR Dock, and moved. Suggested use of one
lift at a time. Activate a switch for four hours of Power.
my BOAT has shore Power. Did Not work. Can't have 24/7
Security. Had to Allow \$1000.00 per year for Storage Battery
Replacement.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Really Against... removing "No Wake" Buoys. They
help prevent Dock Damage, and also help save lives at
Branson Shores... lots of people in the water.
Since you can't make "Speed bumps", Use Buoys.

Comments on the 2014 Master Plan:

Regarding "Line Voltage" Docks... I'm OKAY with having Electrical
Inspection, even at a moderate cost to dock owners.
When you consider there has never been anyone electrocuted
at Table Rock Lake, Are we creating a problem?

Comments may be submitted via mail, email, fax or the project website with attention to: Table Rock Lake SMP/MP/EA Project Manager, Programs and Projects Management Division, USACE, Little Rock District, P.O. Box 867, Little Rock, AR 72203.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

I feel that there are already enough regulations on this lake.
It's a beautiful lake and the people that live here take good care of it.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Can't imagine who came up with the idea of solar power on the docks. They all already have solar and our experience with solar is not good. Also, how could they possibly expect everybody to come up with the money to do it. Most offices in Shell Knob are closed and this is not possible for anybody's budget.

Comments on the 2014 Master Plan: _____

Not sure who the people are that sit and come up with these ideas. Obviously they are not talking to the people who live here.

Also, why would they want to remove all the ~~bars~~ boueys from in front of private docks on the lake? They are ~~they~~ there for a good reason - for boats to slow down & for protection of people swimming off the docks.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Instead of these too strict limitations of cosmetic issues...enforce the rules already on the books and simply limit the size of motors and length of boats. The later will take care of many thing, most importantly loss of life!.

20170915_Turner_B-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Beverly Turner

- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

Dear core of engineering, my family loves tabletock lake and appreciate the fine work that the core does... with that said, some of the proposals inoutlined in the shore management plan go way too far....including most of the items above.

20170915_Uehling_P-WA

Specific examples that I completely disagree with include:

- not allowing golf carts near docks
- not allowing the storage of fishing equipment and other boating equipment in a secure dock box
- requiring existing dock owners to convert to alternate energy sources (solar and wind)
- lake carrying capacity

Again, we appreciate your efforts to keep the lake clean and safe... but the proposed measures are unnecessary and costly, ultimately diminishing the enjoyment of our beautiful lake.

Thanks,
Phil Uehling

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

NO WAKE Bouys are essential for safety. Bouys are present on all lakes for warnings - shallow water etc and are there for safety. No one looks to signs on a dock for warning.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

To say no storage on the dock except for essentials for boating is laughable. Much of the enjoyment of the lake centers on swimming from the dock, watching small children swim, visiting friends + neighbors etc and without seating etc this is made impossible

Comments on the 2014 Master Plan:

Erosion is due mainly to the high water levels we have had since 2007. A direct correlation to Branson landing and protecting it - it was built in a location that flooded after any significant rain. Lake went over 930 only 1 time before that - I believe in 1993 or 1996. Weather forecasts have had warnings that were not acted on until after the fact

There also need to be restrictions as to boat size - 42' cruisers for example and wake boats that put out ridiculous amounts of wake - damaging both shoreline and docks!

Restrictions on mowing sometimes get ridiculous. I understand the no cutting of trees but I do enjoy boating down the lake and seeing lawns mowed completely to the shoreline. Imagine if the states did not allow mowing in front of homes along public roads and residents could not mow the right of way. What would that accomplish? It is the same with the Corps of Engineers, What do some of the strict mowing rules accomplish?

I can not grasp the problem that seems to have arisen with the no wake marker bouys. They are naturally going to vary in distance from the docks as the water level goes up and down but the Corps representatives and I had a discussion about more patrols for no wake zones. They said the Missouri Highway Patrol has no money or manpower to increase patrols on Table Rock Lake. What is the sense of new rules and regulations if YOU can not enforce them?????

The new PLAN specifies that new docks and older docks must have wind or solar only by a future date. Has anyone thought about the pollution this is going to cause when NON responsible dock owners just throw their dead batteries overboard into the lake because they are too lazy to carry them off the dock and to their vehicle for proper disposal? Not to mention the MILLIONS of dollars it will cost owners to remove all trace of power lines and install solar power.

As long as dock owners do not store large quantities of hazardous materials on docks why try to regulate what is stored and where dock storage boxes are placed. Have there been any private docks explode or catch fire?

It just seems to me that the Corps has just adopted the attitude that "We know what is best for everyone and do not question us as there is no leeway or bending of our rules." I can understand that some Corps personnel might have that attitude because they do not want to have to defend their actions to their superiors so they go strictly by the rules instead of using good sense and making their own decisions.

I am certain there will be a LARGE number of comment forms returned or sent by email. I sincerely hope the Corps of Engineers gives consideration to all comments and recommendations.

A CONCERNED CITIZEN

1	2	3	4	5	6	7	8	9	10
Strongly									Strongly
Disapprove									Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

The Alternative power (solar panels) requirements are not a good thing. Cost - What happens when there is no sun in the winter? Dock owners can't raise and lower lifts or charge boat batteries.
~~The~~ The corps limitations on pathways and stairs are limiting and dangerous to elderly and handicapped dock owners.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

The corps should spend our money on making the lake easier to use. I am going to complain to my congressman and investigate a lawsuit based on the Americans with disabilities act.

Comments on the 2014 Master Plan:

Our again your go to tactics hopefully will fail. Your feeble attempts at environmental limitations attempt to protect the cedar growth recently condemned by your government department of interior. It is unfortunate that the corps can not function in the interest of those who pay your salaries.

MAJOR ITEMS FOR CONSIDERATION: We invite you to consider the benefits and constraints of each idea presented below.
Use the comment card to provide comments and any new ideas

Private / Community Dock Program Ideas	Current	Vegetation Modification Program Ideas	Current
Allow self inspections or establish a "licensed inspector" program <i>Bad Idea</i>	Park Rangers inspect docks	Distance from habitable structure <i>OK</i> → 200 feet	
Reduce paperwork work collection (bill of sales, boat registration, etc) <i>no - this is important</i>	Used for verification purposes	Require applicant to obtain a registered land survey for private property adjacent to government land for verification <i>Not needed</i>	Not required
Allow Personal Water Craft lifts on perimeter of dock <i>Leave as is</i>	Shore side only	Diameter of trees permitted to cut <i>OK</i> → 2" or smaller	
Require use of solar or other alternative power source <i>Only after existing fails</i>	Solar only	Removal of invasive species <i>OK</i> →	Limited by tree size
Allow new docks to run parallel to shoreline <i>agree</i>	Perpendicular Only	Require a vegetation management plan <i>Not needed</i>	Not required
Remove restrictions on grandfathered docks <i>disagree</i>	Size of dock/slip restricted	Meandering 6ft wide path <i>OK</i> →	Allowed
Remove restriction on minimum number of slips/Allow private 1-2 stall boat docks <i>OK</i>	12 slip minimum	Removal of dead trees <i>OK</i> →	Allowed
Restrict size of slips <i>OK</i>	14' x 30' maximum	Shoreline Zoning Discussion Points	
Allow swim decks and dock lockers with restrictions on size and location <i>OK</i>	Swim deck max. → 10'	Eliminate Table Rock specific shoreline allocations, roll these into the 4 nationwide required shoreline allocations <i>OK</i>	
Dock parking and access; only issue new dock permits/slips that are within 200' of, parking on private property <i>Leave as is</i>	Parking within 200' or closest possible private property	Existing LDA that is unsuitable for a boat dock (Remove or Relocate) <i>OK</i>	
Only issue new dock permits/slips to adjacent landowners <i>agree</i>	Open to any boat owner with access	Existing LDA located adjacent to Forest Service Land (Remove or Relocate) <i>No opinion</i>	
Discontinue new permits/licenses for mooring buoys, tramways, and ski courses <i>OK</i>	Allowed	In Accordance with (36 CFR 327.3) we will look at Commercial Marina Expansions as alternative to additional private or community docks <i>Disagree</i>	
		No net gain of LDA, gain of LDA, or max growth of LDA <i>No opinion</i>	
		Define max density of docks within an LDA at Table Rock Lake <i>agree</i>	

→ and no wake ~~buoys~~ remain permitted

1 2 3 4 5 6 7 8 9 10
Strongly Disapprove **Strongly Approve**

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Your proposal to eliminate electrical service to the dock by 2027 is the type of impractical, theoretical thinking that characterizes the public's opinion of the arbitrary, unreasonable nature of such an autocratic governmental organization. Dock owners have invested in boat-lifts to prevent damage to their property from constant wave action, corrosion to their hulls from lake-borne organisms and pollutants, as well as dock damage by boats. This would also affect the owner's ability to keep their boat's battery charged and prepared for use in addition to other common electrical conveniences. The issue of safe use of the dock at night as well as the theft deterrence from trespassers is likewise being ignored by your agency. Do some research on solar storage before making "green" mandates and you'll find it is largely inadequate for anything but a single, limited light source overnight. Do you actually have functional knowledge of how people normally use the lake? Your impracticality is ridiculous.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Thought it was useless double-speak filled with assumptive and spurious conclusions. If the Corps was truly interested in safety to humans and wildlife then you would focus on the poorly treated effluent generated by the upstream towns and cities which causes an over-fertile condition on the James River Arm of Table Rock Lake. But, of course, that would require inter-agency cooperation with other government agencies such as the MO DNR and others. I think that the entire Management Plan is merely a way for government employees, supposedly working for the tax payers, attempt to justify their existence and salaries by recreating the wheel and "fixing" something that's not broken. My impression is that you are more interested in flexing your authority and generating permit revenue than attempting to make the public's lake experience more functional and enjoyable. You people take yourselves way too seriously as indicated by the puffery of your verbiage. You are generally hinderances to the public enjoyment of the lake. It's shameful.

Comments on the 2014 Master Plan: The necessity for four (4) pages of acronyms and abbreviations prefacing your presentation of the Master Plan is testimony to the verbosity of your analysis and conclusions. I'm sure that you are proud of this document, and it may intimidate the common man so much that they become compliant but it is obvious to a learned reader that the same issues and recommended solutions could have been generated more succinctly in far fewer page of text. If you used Table Rock Lake for entertainment as much as you use it as only something to be analyzed, you might have a far better understanding in what the public deems important concerning the lake and how they care about their lake experience. And this brings me to my final point: This IS their lake - no the Corps, not the government's - and the Corps constant micromanagement and autocracy regarding its use gives the impression that agencies like the ACoE would rather turn Table Rock Lake into a natural museum rather than help accommodate its reasonable use as a recreational resource. Truthfully, you should all be ashamed of your persistent interference with the public.

20170915_Unknown_7

This letter is in response to the proposed changes to Table Rock Lake Shoreline Management Plan. So far everyone I know connected to Table Rock believes these changes are NOT good for our lake. The matter of dock permits the current rules should be kept in place. By issuing dock permits for more private docks and for small community docks will turn Table Rock Lake into another Lake Of The Ozarks! Every single spot zoned for docks will fill up with tiny docks and ruin the shoreline. The main goal should be to try to keep Table Rock Lake as beautiful as it is and to keep it a FAMILY SAFE Lake. The people who have bought or built homes here came here because they did NOT want to be on a nightmare lake such as Lake Of The Ozarks! WE DO NOT WANT THIS LAKE CLUTTERED WITH SMALL DOCKS POKED IN EVERY SPOT POSSIBLE. Also by issuing small dock permits it will limit the number of slips available for future growth. I am not sure what the limit is now but a dock with 10 or 12 slips seems to be the perfect size. PLEASE DO NOT ISSUE ANY MORE PRIVATE DOCK PERMITS!

Also small or private boat docks will probably create a nightmare with parking, launching and other problems.

The issue of no wake buoys brings many questions to my mind. I wish you would have explained the reasons the Corps thinks these changes will be of benefit to the people connected to the lake or for the good of the lake.

No wake signs on the docks is a ridiculous idea. By the time the sign can be read it will be too late. NO one is going to be looking for signs and therefore will NOT see the signs. The goal should be to keep wakes away from docks and small coves where families are anchored while floating and otherwise enjoying the water. Now that paddle boards, kayaks, canoes and other floating devices have become so popular their safety needs to be addressed. The small cove we live on has been protected from MOST of the dangers of jet skis and boats running over children, paddle boards etc. with the help of NO WAKE BUOYS! IF you restrict the no wake buoys you will be making a more dangerous situation for the people on the lake but not in a boat. REMEMBER BOATS DO NOT HAVE BRAKES! AND NOT ALL PEOPLE HAVE GOOD SENSE!! The biggest problem with safety boils down to jet skis and wake boats. Jet skis ripping around each other racing and spinning NOT paying attention to other people on the lake. The same thing is true of the big wake boats. Half of the time the driver is too busy watching behind the boat rather than paying attention to the dangers in front or to the side of themselves.

Large wakes cause children floating by the dock to be slammed into the side of them thus making the children afraid to get in the water. Also large wakes cause docks and the people sitting on them or the boats in the slips to be rocked and rolled around to the point of making it miserable to be on the dock and even making some people sea sick.

There is more than enough water surface area for water craft to go as fast as they like out in the open while restricting the speed in coves and around docks. That is the way it should be. SAFE AND STILL FUN! I do agree with the solar energy. It is too rocky and very expensive to go underground and electricity and water do not mix well. Overhead wires are not attractive.

The next question I have is why can a dock owner only make changes 1 time in 5 years? If it is too expensive to do all of the improvements at one time then why can't improvements be made as owners can afford? In a community dock not everyone has the money at the same time to make improvements.

To whom it may concern at the Corps of Engineers;

We as citizens that live near Table Rock Lake are against the following:

1. Against green energy requirements for boat docks.
2. Against limits on how often dock may be modified.
3. Against not allowing people to store things like fishing equipment and lawn chairs on docks.
4. Against disallowing boats with holding tanks or porta pottys on private or community docks.
5. Against prohibiting no wake boats at private and community docks.
6. Against not allowing private entities to cut dead wood on corps property.
7. Against the prohibition of parking golf carts or ATV's on corps property.
8. Against changes to rules which will in affect limit who uses the lake and when.

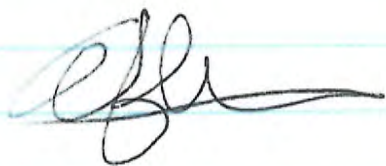

Furthermore, who is the lake suppose to ben. fit? The public or just big marinas with deep pockets?

Why can the corps raise the water level for months on end, Killing mature trees an eroding soil all around the lake

sometimes several feet deep, and not be penalized by the EPA for soil erosion and deforestation of public ground? But, let one citizen let too much water out some small place or cut tree some where and the EPA is all over them?!

What is the real mission of government services? To help or to control citizenry?

I think there is just too much bureaucratic micro managing that doesn't help or serve anyone!

A handwritten signature in black ink, appearing to be 'Elli' or similar, with a long horizontal stroke extending to the right.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Van Engen_B-W

I HAVE ONE QUESTION, WHO IS GETTING A KICK BACK
ON SOLAR PANELS?

Table Rock SMP/MP/EA Project Manager
Programs and Projects Management Division
USACE, Little Rock District
PO Box 867
Little Rock, AR 72203

Dear Sirs, I am writing this letter to express my comments to you regarding the proposals you are considering for Table Rock Lake. I reside in Stone County and own a boat slip on a Community Dock on Little Aunts Creek.

After having read your proposals, I am deeply disturbed about your plan on the following issues:

1. It is my understanding that you propose to increase access on Table Rock Lake from approximately 19,000 to 31,000 sites. This is a 60% increase. If **you** were a resident and had access to the lake, would **you** be in favor of turning Table Rock into something resembling Lake of the Ozarks? People there have difficulty even getting on the water at times because of the boat traffic. I, as well as my friends and neighbors do not want to see Table Rock go in that direction.
2. It is my understanding that you want to remove all the NO WAKE buoys from the lake and replace them with NO WAKE **signs** on the docks. One of your rangers expressed concerns about the distance between the buoys and the docks. Apparently he had no idea that the docks are moved in and out with changes in lake levels while the position of the buoys remains **fixed**. That would mean at times the buoys might be closer or farther from the ends of the docks. That shouldn't be an issue.

The issues that we have are because of the large boats and wake boats traveling up and down in the smaller creeks and coves and creating massive wakes that put severe strain on the dock cables and eventually cause damage to the docks.

If you think that boaters traveling at high speeds are going to see and even read a NO WAKE sign on a boat dock, believe me, that is NOT going to happen.
If the buoys are removed then boaters can come very close to the docks, which will endanger lives and property.

On July 30, 2017 I was supervising my two grandchildren while they were swimming off the end of our dock. A Bass boat, towing a water skier came roaring up the creek and passed between the NO WAKE buoy and the dock, endangering my grandchildren.
The boat went on down past the three NO SKIING BEYOND THIS POINT buoys in Little Aunts Creek.
I called Water Patrol and they were on the scene within 15 minutes but the offenders were nowhere to be found.

Before you tell me this is proof that the buoys do not work, ask yourself, how many other boats would do the same IF the NO WAKE BUOYS were removed?

I believe this incident was not the norm and that most boaters and skiers do indeed pay attention to the buoys, but again, they would not see or could not see a NO WAKE sign on a boat dock.

PLEASE PLEASE PLEASE re-consider this proposal for the lives and safety of all concerned.

3. It is my understanding is that you are proposing eliminating the use of electricity on the docks via shore cables either overhead or underwater. You are proposing the use of solar panels to produce the electricity needed on the docks.
I must ask if you have really thought this through.

How many solar panels would be needed for a 20 slip dock and how much weight would solar panels exert on the roofs of the docks?

What would the cost be to a Community Dock to purchase the panels and to have them installed?

What will happen to the solar panels if we have a severe hailstorm? (and we DO get them here in Stone County)

How much will our dock insurance increase to cover these solar panels?

What method would be used to 'store' the electricity generated from the solar panels until needed?

How much electricity can be generated by solar panels?

Is it enough to charge boat batteries, run boat lifts and provide lighting on the docks?

One of the older docks nearby has a solar panel which only runs the dock lighting for a few slips. It requires NINE 8-volt batteries for *just the lighting*.

So if a bank of batteries is used to store the electricity until needed, how many batteries are we talking about?

Where will these batteries be placed on the docks? They cannot be placed on the walkways or on a swim deck because that would endanger the people walking on the dock.

How much weight will the batteries have? Will the excess weight have and adverse effects on the dock and its structure?

Why a undermine one of the very purposes of Table Rock Dam? Wasn't it built to generate electricity? We are consumers of electricity via White River Electric.

As I understand it, every dock permit renewal requires a complete inspection by a licensed electrician before the permit can be renewed.

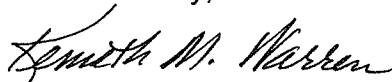

We have fully operational GFCI's on every slip on our dock.

Please consider these facts before you make every dock on the Lake go 'solar'.

I am sure you have had many comments by the residents around Table Rock Lake regarding your Shoreline Improvement Plan.

It is my hope that you will go back to the table and re-evaluate these issues.

Sincerely,

Kenneth M. Warren

Your Name/Organization: RICHARD WARREN

Address: 35 LAKEFRONT CIRCLE
KIMBERLING CITY MO 65686

E-mail: RWDN69@YAHOO.COM Phone: 417-699-0145

Please circle the number that best represents your opinion of the draft documents: Revised Shoreline Management Plan, draft Environmental Assessment, and draft Finding of No Significant Impact:

1 2 3 4 5 6 7 8 9 10
Strongly Disapprove Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? INCREASING LAKE ACCESS POINTS FROM 19,000 TO 30,000 WILL INCREASE LAKE AND BOAT TRAFFIC TO A NON-MANAGEABLE POINT AND WILL INCREASE THE DANGER OF WATER CRAFT IMMENSELY. TABLE ROCK WILL BECOME ANOTHER LAKE OF THE OZARKS - UNACCEPTABLE.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? MANDATORY SOLAR ENERGY WILL INCREASE ENVIRONMENTAL HAZARDS DUE TO BATTERY STORAGE AND DANGER OF EXPLOSIONS AND SPILLS. THE ESTIMATED COST OF \$1000.00 PER SLIP OWNER IS UNACCEPTABLE.

Comments on the 2014 Master Plan: REMOVAL OF NO WAKE BOUYS IS NONSENSE, REPLACING THEM WITH SIGNS OF "NO WAKE" ON THE DOCK. BOATERS WILL NOT READ A SIGN WHILE SPEEDING BY THE DOCK. WE HAVE DIFFICULTY NOW TRYING TO GET BOATERS TO OBEY THE NO WAKE BOUYS AND WE HAVE HAD 3 SLIPS WITH LIFT DAMAGE DUE TO WAKES THIS YEAR

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I feel this would kill our lake tourism. Create more damage to boats and our docks. I have grown up on this lake and I love being on the lake. I've lived, have property. I enjoy boating with friends and family. Don't take that away.

20170915_Warren_S-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Sonya Warren

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Removing the power to our dock will cost substantially more money than we can afford and would ultimately result in us having to sell our place on this beautiful lake.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Forcing individuals to convert their docks to solar power in 10 years is unrealistic. The cost would be \$15,000 to \$20,000 per dock & the solar technology has not yet been developed that would make this possible or feasible. Also, the electrical systems in place currently are inspected every 5 years. There simply is not a need for this change, which will not work anyway. The amount of electricity used by private docks is miniscule compared to what is used by commercial marinas with their pumps, A/C, & coolers running.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? No wakebumps help avoid erosion of our shoreline, provide safety to swimmers & damage to boat docks. Vacationers often rent boats & have no clue what the distance rules are, nor other rules for safe boating are. Wakeboard & surf boats put off large wakes which cause erosion of the shoreline also. Increasing the lake's usage by 60% would just bring more of these larger boats & uninformed boaters.

Comments on the 2014 Master Plan: Changing the slip sizes is unnecessary & driven only by dock builder. I would like to see the cedar trees recognized as the invasive species that they are. They are NOT native to MO & choke out native species like the dogwoods, red buds & service berry trees. Possible rule, for every cedar tree removed, plant 2 flowering trees. Cedar trees use a lot of water as well. When there is someone with a disability, we should be able to take them to the docks via ATV's. It seems like the Corps is making issues where there are none. you

don't have enough personnel to implement all these wasteful, unnecessary changes. "If it's not broken - don't fix it."
We care about our lake - participate in shoreline cleanup every year & want our lake to remain beautiful, but I don't believe any of these changes are necessary or will improve anything.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Solar power on docks. At this time it is not really a viable system available that would work for community docks. It would cost \$15,000 to \$20,000 to install the solar power which includes removing existing electrical system & rewiring to solar. This is a lot of money for a system that does not work. We don't have the electrocution problems here that Lake of the Ozarks has because of inspection every 5 years. The amount of electricity saved is nothing compared to the commercial marinas with pumps, coolers, & A.C. runtimes.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? To try to increase lake usage by 60% will destroy the natural beauty of the lake. The bigger boats, wake board, & surf boats will contribute to the erosion of our shoreline. You are talking out of both sides of your mouth when you want to increase usage by 60%, then decrease the dock size. Also, the elimination of the no wake boaters is a tremendous safety issue. The people who vacation here can barely stay 100 feet away from docks with the bangs in place - much worse without them. This could also cause possible erosion of the shoreline.

Comments on the 2014 Master Plan: I am very concerned with the unworkable & expensive solar conversion, the possible increase in lake usage by 60%, & the decrease in the size of the boat slip, and the elimination of the "no wake" boaters. I would like to see the elimination of the invasive cedar trees. This species is not native to the area, they choke out native trees, and they use a tremendous amount of the water resources. I suggest that for every cedar tree removed 2 flowering native trees, such as the red-barked dogwood, or serviceberry trees be planted.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

BUFFER ZONES ARE VERY IMPORTANT TO LAKE HEALTH
IN GENERAL. I AM AWARE THAT THERE ARE PEOPLE THAT
DUMP RAW SEWAGE AND SPRAY VEGETATION KILLER AROUND
DOCKS, ETC. AND AT SHORE LINES. MY CONTACT W/ USCOE HAS
BEEN EXCELLENT AND CONSTRUCTIVE.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? Keep in mind that commercial owners come and go, private land owners are your job security. Trespass is a significant problem - Abuse is a real problem.

Comments on the 2014 Master Plan: Keep adjacent land near landowners. Keep commercial areas under strict control for public use. Control numbers and size of docks (public & private). Take it slow and easy, use common sense in making decisions that affect taxpaying landowners, who make up the majority. Remember that lake property is a huge investment for us.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Golf carts provide access to the lake which was designed for recreation. Only allowing handicapped golf carts is discrimination against pregnant women small children the obese-bodied elderly access to the lake. They do not impact the environment.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Anytime electricity is ridiculous. The dam generates electricity. Looked into cost and it would be 3500.00 not the 800.00 the corp is stating. People on fixed income get 1200 etc. can't afford this ridiculous change. Putting out poles and lines can negatively impact the environment. Were told to remove solar panels 15 years ago and local farmers. Now corp is changing their mind yet again. Seems to be more of a govt overreach and a control issue.

Comments on the 2014 Master Plan:

Lake Corps in an impoverished area and these ridiculous comments affect the community negatively. As a taxpayer, I resent the crazy government regulations serving no purpose. Again, control issue. The lake is a govt agency paid for by MY tax dollars. Stop wasting them and get a grip.

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

20170915_Wells_K-W

Keith Wells

Strongly Disapprove I'm not sure how this works (the rating) but we don't ^{was} ~~have~~ a lot of changes. We also want to park our golf carts by our dock. Strongly Approve

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Being required to go solar (alternative energy) in 10 years. Existing docks should be grandfathered in. It's too early and cost prohibitive. We are going to retire in 6 to 7 years and it would be too expensive. Winter days we could not generate enough power for our lifts. 8 slip dock all have lifts. We all fish 10 months of the year.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? I don't understand all the questions. I have just been writing out my thoughts

Comments on the 2014 Master Plan: ↑ I am for Alternative 6. We have had a home and dock since 1992. We are good stewards of our beautiful lake. We pay all fees as they have increased over the years & abide by new rules & restrictions. I ~~pay~~ fee! This new plan is too restrictive. You cater to tourist that treat our lake (we clean up) & they don't pay the fees or taxes as we do.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? _____

I'm for Alternative 6

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? _____

No solar in the learning phase of Gas was told by Corp. rep at Sheri Knob meeting. Early stages, learning, researching is not good enough. When more is known in 20 years or so, it may be cheaper or better. I've worked so hard to hopefully retire in 6 years, only to find I can't afford to keep 2 slips any longer. Existing dock permits grandfathered in

Comments on the 2014 Master Plan: I'm unsure how to answer the ↑ so I will say I am absolutely against being required to use alternative energy sources in 10 years for those of us that have had boat slips for decades. How can the batteries that potentially leak acid from powering the solar panels be safer. Until a time we can afford to power our homes with solar, how can you require us to bear the cost prohibitive switch to run our lifts we should be grandfathered in, please!

RE: Table Rock Lake Shoreline Management Plan

Dear Corps of Engineers Decision Makers,

I am deeply concerned about the drastic changes that are being proposed in your draft Shoreline Management Plan for Table Rock Lake. The community has been very clear in thousands of public comments submitted that we are opposed to over-regulation. We've asked many times for NO CHANGE to be made to the Plan, but there are several items of major concern:

- I object to the carrying capacity as it limits the right to use the lake.
- I object to tighter restrictions placed upon vegetative management permits.
- I object to the new non-transferable grandfathered vegetative management permit rule.
- I object to financial hardships of removing electricity from the lake.
- I object to only one request every five years for dock modification.
- I object to the 8' depth requirement for any new docks.

I would ask that the Shoreline Management Plan NOT be changed. At the very least, please do not allow the changes noted above to go into effect. It would have a devastating economic impact and would be detrimental to the public's right to use and enjoy our lake.

As a property owner in kimberling city and a boat slip owner I do NOT like the proposed changes regarding shoreline management, no wake buoys and total solar power requirements on OUR docks.

20170915_Whitesel_M-WA

I am encouraged that the public's comments during the process have been acknowledged by the Corps. Thank you for listening. Please continue to help us protect our rights to use and enjoy our beautiful lake.

Sincerely,

Michael Whitesel

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Eliminating No Wake Bouys will create a major hazard, without them it is unsafe to swim off the end of our dock. Prior to the installation of ours, we repeatedly had close calls with high speed boats + water runners coming too close to the dock. In addition, with bigger boats on the lake now, the dock is getting beat up more & more. Keeping boats away from docks improves safety for

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Swimmers wear & tear on docks, and shoreline erosion in the vicinity.

On a related matter, the practice of using slow speed boats to create a large wake for "surfers" should be banned in all coves and hollows. It creates increased shoreline erosion, damage to docks, and traffic hazards.

Comments on the 2014 Master Plan:

I appreciate efforts to go "green", but requiring docks to go solar by 2020 seems extreme. Docks use very little power. Just require solar conversion when the existing power supply fails and needs to be replaced. In addition, do you really want a larger number of facility based power sitting on all the docks?

Please use this form to provide comments and suggestions about how you would like to see the Table Rock Lake Shoreline Management Plan revised or on the issues that should be studied before a decision is made on Shoreline Management Plan revisions. Feel free to take an extra form to provide to friends or neighbors and send the forms back before April 17th, 2015 to USACE at the addresses below.

(Optional Information)

Name/Organization : Scott Williams
Address: 27131 FR 1255
Golden Mo. 65658
E-mail: EScottWilliams@aol.com Phone: 417-271-6289

We want your input during this update process. Please use this form to provide your comments and suggestions on items to update in the Table Rock Lake Shoreline Management Plan (SMP). Areas of discussion might include: current zoning, current policies on dock and vegetation permits, how could the lake and permits be better managed. Please be as specific as possible.

1. I would like to be able to keep my fishing gear in my boat in the dock so disabled people would have difficulty carrying it to the dock.
2. Due to dock layout, I have to take to my dock.
3. Removing the rocks in the zone, and making my grandchildren a swimming area in the dock. A skin diver skinned through there last year.

Comments may be submitted via mail, email, or fax with attention to: Dana Coburn, Chief, Environmental Branch, Planning and Environmental, USACE, Little Rock District, P.O. Box 867, Little Rock, AR 72203.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? The Plan, is totally against Private Citizens in the increased cost of these plans. The increased requirements for plans place an undue burden on the Corp. They will need to increase the number of people needed to comply with these requirements, including enforcement of the new regulations. The requirement of solar is objectional completely unnecessary. The additional cost does not offset the benefits and will place hardships on all docks on the lake. No wake buoys work and are needed, to remove them is just plain stupid. Applications, line 37-41 again overregulations, and additional burden for enforcement. Storage lockers on plans, not needed. Swim decks, overregulated again. Dead trees, due to entended high water levels, need to be removed without a permit. The regulation LOP, again overregulation.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? These proposed changes only add undue burdens on existing docks on Table Rock Lake. The changes are not designed to be beneficial to the Environment, just additional burdens on dock owners. The idea of not being responsible owners in protecting the dock users is stupid. The additional requirements only mean more personnel for the Corp, trying to justify the additional expansion of itself. No Wake Buoys work, electricity works, there is no need for solar, expecially the expanses involved. We do not need someone in at the Corp headquarters to tell us what is good for us what we need. We are responsible Americans and have proven it by being able to own boat slips and docks.

Comments on the 2014 Master Plan: Where is common sense, the environmentalists have too much input into these additional regulations. The additional cost of this plan is crazy, removing buoys, solar. The docks that are here now work just fine, why put additional burdons on the Corp. This plan if approved will increase the need for more personnel at the Corp. Again where is common sense?

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

1. Importance Of Community Boat docks already in existance Be
grand fathered for dock permits.
2. No wake bouys be allowed at community docks. This is
imperitave for safety of swimmers. With so so many rental boats
& inexperienced boaters that dont pay attention. Someone or more
than one person will get run over by boats if No Wake Bouys arent allow

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

1) I believe it is more important at this stage to limit the large cruisers that are on our pristine lake. Just because boat stalls have been built at commercial docks does not mean the Corp should allow these large vessels that put out enormous wakes - damaging docks. This does not include houseboats, just to be clear. Houseboats are slow moving, and usually moored at a location. They are not just driving to and fro creating wakes.

Cruiser type boats, should belong on Lake of the Ozarks with all the other large boats.

2) In addition, the ski boats that have the "Wakesurfers" in tow should stay at a far distance away from boat docks. This is another enormous wake that is damaging our docks.

They should at least stay 200 ft. away from docks or no wake buoy's. Some type of action should be set for "Wake surfing" and ticketed if not adhering to Corp. rules set forth.

3) It is also my opinion that too many rental boats are now available. If you want to keep Table Rock Lake safe, pristine and enjoyable please remove the insane amount of rental boats that have been added in 2016 & 2017!

It is not safe that inexperienced boaters can take up this much space on our lake!

This should be monitored at commercial docks, only a certain # should be allowed!

At the VERY LEAST NO MORE RENTAL BOATS (Amount) should be allowed - Please.

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Obviously written by attorney so the general public has no idea what the alternatives really mean. Keeps referring back to these "alternation" plans, or the previously approved plans. Did it really take 3 yrs. to come up with these ideas? Could have been written in about 10 minutes! But then again, that's government at its finest!

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? This lake was built with taxpayer's money; not Corps money. The Corps does not own it, the American citizen owns it. The Corps was hired to manage it, in the best interest of the people, not the best interest of the Corps. All 6 of the alternatives were not in favor the people.

Comments on the 2014 Master Plan: I went to those meetings. I realized the spokesperson from the Corps, not from Table Rock, but from Washington D.C., didn't know when the lake was built, how big the lake is, or what counties it was in; the Washington D.C. people knew NOTHING about Table Rock. I'm sure the decisions have already been made. These letters are just formalities

You never asked which Alternative I think is best. I wrote for Alternative #3. I told you this was simply a formality?

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? Limit of Boats on Lake, Size of Trees on Vegetative Permits, Solar on docks, No Locker or lake items on docks.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision? For the last 30 years the lake has worked if the growth in the area. Now the COE wants to change the way people enjoy lake. I think if the COE changes the rules on Lake it will greatly harm the growth of the area. Just leave it the way it is now. What does that harm?

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan?

Electricity is expensive, why make it so expensive if possible. Also is this for people with private property to ground them in water, we don't use that much electricity to begin with.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

Cost too much for people that are not in a lower the water of ship lower water levels kill lake experience

Comments on the 2014 Master Plan:

20170915_Zimmermann_W

Dear Congressman Long:

I am a dock owner on Table Rock Lake and have concerns about several items in the proposed Corps of Engineer's Table Rock Lake Shoreline Management Plan to the point that I think it is a good example of government over reach.

The first item is to remove No Wake buoys by December 31, 2020. We have had problems with wake damaging docks on the lake. In fact, I have had to have repairs made to our dock this last month due to damage caused by wake. They say we can post No Wake signs on our dock. The problem is, by the time a person gets close enough to read the sign he has created a wake. We do not need boats coming closer to our docks and swim platforms. This is a bad idea.

The second item is to remove all shoreline power lines to the docks by December 31, 2027 and replace power with solar power. It sounds to me like a solar power lobbyist got to someone in the Corps. Table Rock Lake has over fifteen hundred docks and some are not designed to support solar panel loads. The Corps is concerned about how the shoreline looks. Can you imagine what the shoreline will look like with huge mirrors on every dock? I cannot imagine what the marinas and resorts will look like with their multiple docks many of them containing large house boats. Our annual power cost is approximately \$300 a year. To install solar power would cost approximately ten to twenty thousand dollars, and with annual maintenance costs added we will not be able to recoup costs and paying more for our electrical costs. The Corps maintains that this will stop deaths from shocks in the water. This it will do, but how many such deaths have we had on Table Rock Lake? There is circuit breaker equipment available to prevent this.

I appreciate you looking into this matter.

Walter Zimmermann

101 Monterey Drive, Branson, Mo. 65616

What are the most important factors that affect your opinion of the draft Revised Shoreline Management Plan? #3

I agree with some of the proposed changes, and strongly disagree with several of them. One, I don't agree with removal of all NO Wake buoys. I believe that removal will not only amplify damage to docks and shoreline, but will also endanger people who are swimming near the docks. I don't understand the logic used to propose this change. Also, I feel that if the Corps is truly concerned about shoreline management they will either designate areas where wake surfing can be allowed, or designate areas where wake surfing is prohibited. In narrow channels, this activity is destroying the shorelines as well as damaging docks and marine vessels. Something needs to be done to reduce the negative impact to our shorelines that wake surfing is causing, and restricting this activity to wider channels could help.

What are the most important factors that affect your opinion of the draft Environmental Assessment and draft Finding of No Significant Impact prepared for the Shoreline Management Plan Revision?

don't agree with total conversion to solar by 2027. I believe it will still be cost prohibitive.
